Subject: Press Inquiry - ITC - water quality testing

Good afternoon,

I'm inquiring today about water/soil contamination in the vicinity of the ITC plant in Deer Park and, as it relates to water, downstream of the site.

I know EPA officials have said they took water samples. Is there any way to describe generally when, where and how many were taken? Have those samples been tested yet? If so, what did the tests show?

Also: Has EPA done any modeling or projections to show where suspected/confirmed contaminants have flowed or are likely to flow downstream of the site?

My deadline is 4:30 p.m. today. (I apologize for the late notice.)
