4/20/12 Kevin EPA

WTI did accept the waste initially, so rejecting it may not apply.

- WTI would become the generator if they shipped it

McCoy 6.6.3.12.1

- ATI may not be returning calls from WTI
- RCRA applies now + everyone agrees it is a HW.
- Utah army base w/ flamethrowers - option?

Send Kevin letter (DEQ request)

→ Was Chang declared it not recyclable, so they determined it is a waste. May be a co-generator w/ Pacific Coast.

- Kevin - nothing that Region X or ODEQ can do. Up to Ohio.
  Le months is up in May.
  Le no storage limit of WTI is a driven permit would compel WTI. Contract between ATI + WTI is what WTI can use.

- If WTI returns it they become the generator = liability. Plus they don't really know what it is (waste composition).
- 32 drums still in as arrived condition.

4/28/12 Lee Webber - ILM 0926

?'s on letter, update on waste in OH

1:40 Lee LMM

2:01 I called Lee

- Can't explain in lab scenario's what happened at WTI, so they want to analyze.
- Waiting to hear from contractor about schedule
- Wants to evaluate the prior to shipping
- Contractor is also a TSDF, So they will handle it all the way through.
  - Not yet decided if they will take the waste. (possible another incinerator)
- "Just open the overpack" is current request, would flood it w/ cutting fluid if dry.
