10/18/04 Clean Harbors Mtg p.1

Conducted site tour first

Note floor drain plugged in Bldg D

High PCE samples in SWMU #17 gondola area

Note that possibility exists for gw to be passing beneath Chisolm. Photo of houses on opposite (east) side of I35.

Note also that 10s/11s are most likely in connection w/ Chisolm Cr. The Cr is down an embankment that is about 15-20 ft. deep.

What are goals for site? Is Clean Harbors seeking clean closure, or just manage facility?

Complete RFI, Risk Assessment, CMS based on results of RA

Ask for Site Conceptual Model

Need to do review of data for purpose of risk assessment

440900

RCRA RECORDS

10/10/04 CHR Mtg

p.2

- Use KS VCP & EPA R9 PRGs for CoPC determination

Site can't qualify for ACL
Discussed lead cont. and need to do
Need to do RA? Soils cleanup largely based on leaching to gw

Discussed CA 725 EI - YE copies will be mailed out soon

CA 750 EI - plume stable? Samples in Chisolm Cr. when highway constr. was disrupting flow.

3-4 Rounds of past gw sampling wells are being sampled during this event.

Surface water sampling? None is OK
May try to fit it in this week
Seds samples - None.

10/18/04 Ctr Mtg p.3

Human Health receptors for surface water? No. Area south of 21st St. is paved and channelized. Fish - not much

Need to look at air (indoor) for future risk. Could also clean up lead source areas to KS VCP generic goals. Clean VOC source areas vs containment. GW clean to MCLs (no ACLs).

Permit renewal application - asked for a copy

RFI Comments - most mistakes/omissions or interpretive issues. Chris asked for some less definitive language for issues like gw discharge to Chisolm Cr. or clay layer ~~acting~~ acting to "retard" cont. vs. confining.

Clean Harbors KS Mtg 10/18 P.4

Suggested that an MW cluster is needed in SW area of site between SK 45/D and SK 35/D, and on east side of HWY 135 where Residences are. May be able to use some data from 29th & Gross site. MW-380 was abandoned when the HWY was improved. MW-380 historian showed sporadic. Cont.

Add El Paso and UPRR data and address comments → Resubmit RFI Report. Will look at well clusters in SW portion of site and to east of Chisolm Cr. later as a part of Risk assessment and CMS.

KDHE would like comment and response

CHK to think about future use of facility and let agencies know

CHK Mtg 10/18/04 p.5

Agreed to do quarterly sampling starting Oct '04 through July '05, with "annual" Report in support of EI in August 20

Conf. call on Wed Nov 3. EPA to schedule conf. line and send time and logistics to participants.
