Carol,
We knew. We told the navy to share the unvalidated data with the water districts.
So far the BPOW wells are ND since they were placed in front of the MWD see Figure.

Good morning Henry - FYI. You may have already seen this. (Doug G forwarded it to Jim Harrington yesterday.) Not sure if this is reason for alarm?

Subject: Plume Monitoring Well Results

Paul,
I received a call from Lora Fly this morning. The monitoring wells associated with VPB 151 which are just north of the Southern State Parkway and west of 135 have come up with 7-8 ppb of TCE. This was confirmed several times during May & June. The depth these wells are 730-755 ft. This is significant information for MWD as these are the highest confirmed concentrations found to date at such a southern location.

Please give me a call to discuss today. Thank you.

Stan Carey, Superintendent
Massapequa Water District
