Sara, this is certainly an odd Tiering. They used the original SAN from 2007 when they proposed something else…

Please see this Rule Summary Document from ADP Tracker.

Please let me know if you would like to raise the possibility of UpTiering the rule.

Thanks –

Keith

Keith,

Could you check what tier this rule is? We're working on the draft preamble, but there have been no discussions about EG or OS. It seems like a pretty major change (gettingpropi rid of the Once-In-Always-In policy) to be a Tier 3, but I just wanted to check before I raised the issue with my management. Thanks.
