GENERAL NOTES

THE "STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION" ADOPTED JANUARY 2, 1971, SHALL GOVERN CONSTRUCTION.

ALL ELEVATIONS REFER TO U.S.C.&G.S. MEAN SEA LEVEL DATUM.

THE FOLLOWING UTILITY COMPANIES HAVE FACILITIES WITHIN THE LIMITS OF CONSTRUCTION WHICH MAY REQUIRE ADJUSTMENTS:

NORTH SHORE GAS COMPANY
ILLINOIS BELL TELEPHONE COMPANY
NORTH SHORE SANITARY DISTRICT
COMMONWEALTH EDISON COMPANY
CITY OF WAUKEGAN WATER DEPARTMENT

WHERE SECTION OR SUBSECTION MONUMENTS ARE ENCOUNTERED, THE ENGINEER SHALL BE NOTIFIED BEFORE SUCH MONUMENTS ARE REMOVED. THE CONTRACTOR SHALL PROTECT AND CAREFULLY PRESERVE ALL PROPERTY MARKS AND MONUMENTS UNTIL THE OWNER, AN AUTHORIZED SURVEYOR OR AGENT HAS WITNESSED OR OTHERWISE REFERENCED THEIR LOCATION.

THE PROFILE GRADE REFERS TO THE GRADE ELEVATION AT THE JOINT SHOWN ON THE TYPICAL SECTIONS AND PLANS.

THE SEEDING SHOULD BE DONE IN ACCORDANCE WITH THE SEEDING POLICY AND SPECIAL PROVISIONS.

THE LOCATION OF UNDERGROUND UTILITIES SHOWN ON THE PLANS REPRESENTS THE BEST KNOWLEDGE OF THE DEPARTMENT AND THE INDICATED ADJUSTMENTS OR RECONSTRUCTION ARE CONSIDERED TO BE REASONABLY ACCURATE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY, AS DETAILED IN SECTION 611 OF THE STANDARD SPECIFICATIONS TO VERIFY LOCATIONS OF UNDERGROUND INSTALLATIONS BEFORE STARTING CONSTRUCTION OPERATIONS. THE CONTRACTOR SHALL INDEMNIFY THE DEPARTMENT, ITS OFFICERS AND EMPLOYEES AGAINST ALL CLAIMS DUE TO DAMAGE TO CORPORATE OR PRIVATE PROPERTY RESULTING FROM HIS CONSTRUCTION OPERATIONS AS DESCRIBED IN ARTICLES 107.19 AND 107.23 OF THE STANDARD SPECIFICATIONS.

WHEREVER A PORTION OF THE EXISTING P.C.C. OR BITUMINOUS PAVEMENT, SIDEWALK OR CURB HAS TO BE REMOVED, THE REMOVAL SHALL BE DONE ALONG THE EXISTING JOINT OR THE PROPOSED EDGE SHALL BE NEATLY SAWED. THIS WORK SHALL BE CONSIDERED INCIDENTAL TO SPECIAL EXCAVATION.

THE REMOVAL OF BITUMINOUS SURFACING NOT ON A RIGID TYPE BASE, REMOVED IN CONJUNCTION WITH THE BASE, SHALL BE REMOVED AS SPECIAL EXCAVATION. THE REMOVAL OF BITUMINOUS SURFACING ON A RIGID TYPE BASE AND REMOVED IN CONJUNCTION WITH THE BASE SHALL BE CONSIDERED INCIDENTAL TO PAVEMENT REMOVED.

UNDERGROUND GASOLINE TANKS WITHIN THE LIMITS OF THE RIGHT OF WAY WHICH HAVE NOT BEEN REMOVED AND WILL NOT INTERFERE WITH CONSTRUCTION SHALL BE FILLED WITH A FREE FLOWING SAND AT THE DIRECTION OF THE ENGINEER. COST OF THIS WORK SHALL BE CONSIDERED INCIDENTAL TO THE COST OF THIS CONTRACT.

EXCAVATION OF UNSUITABLE MATERIAL AT THE STRUCTURE CARRYING GREENWOOD AVENUE OVER THE CHICAGO AND NORTH WESTERN RAILWAY SHALL BE DONE AS SHOWN ON THE STRUCTURE PLAN.

THE INSTALLATION OF RAILROAD PROTECTIVE DEVICES AND THE CONSTRUCTION OF DETOUR C AT THE RAILROAD SHALL BE DONE BY RAILROAD FORCES.

LOCATION PLAN

PROFILE OF GREENWOOD AVE. AT APPLIED GRADE

Scale Horiz 1" = 100', Vert 1" = 20'

GENERAL NOTES

All reinforcement bars shall be lapped 24 diameters unless otherwise shown.

Fasteners shall be high strength bolts. Bolts ¾" ϕ; open holes 13/16" ϕ, unless otherwise noted.

Calculated weight of Structural Steel = 299,730 Lbs.

Diaphragm connections may be adapted to shop welding subject to approval by the Engineer.

The Basic Lead Silico Chromate paint system shall be used for shop and field painting of structural steel.

Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the top flange for a distance equal, to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.

Anchor bolts shall be set before riveting diaphragms (bolting cross frames) over supports.

Slope wall shall be reinforced with welded wire fabric 6" x 6" mesh, weighing 58 # per 100 sq. ft.

The Contractor shall drive one (1) concrete test pile in a permanent location at each Abutment as directed by the Engineer before ordering the remainder of piles.

The concrete rail section above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

~~Concrete~~ piles at abutments shall be driven in holes precored through the embankment in accordance with Article 513.09(c) of the Standard Specifications.

The embankment configuration shown shall be the minimum embankment that must be constructed prior to construction of the abutments.

Item	Unit	Total
Reinforcement bars	Lbs.	114,200
Structural Steel	Lump Sum	1
Class "X" Concrete	Cu. Yds	419.4
Protective Coat	Sq. Yds	1590

NOTES: For Sections, Details and Geometric Layout see Sh. 4.
The lengths and quantities of longitudinal reinforcement and Class "X" Concrete in parapets are not included in Bill of Material for slab. See Sh. 5.
Bars indicated thus 29×5 etc. indicates 29 lines of bars with 5 lengths per line.
Minimum bar laps = 24 dia.

** Dimensions are constant and as shown from West Abutment to Edge of Pavement P.C.C. stations, then vary to East Abutment. See Geometric Layout - Sh. 4.

Note: All dimensions are given along ℄ Railing Posts

PLAN

NOTES:

All Posts shall be normal to parapet.

All Aluminum Alloy Extruded Rail shall be supplied in modular lengths of 30 feet, except at the end of bridge or over open joints in bridge deck where the rail shall be attached to a minimum of 2 posts. If the rail is on a horizontal curve of 2300 foot radius or less, the modular lengths may be reduced but shall be attached to a minimum of 2 posts.

All joints in rail shall be spliced per detail.

Provide 1-⅛" and 2-1/16" Aluminum Shims for 25% of the Posts. Rail elements shall be parallel to Grade – high spots shall be ground and low spots shimmed.

Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per lineal foot for ALUMINUM RAILING, TYPE L.

Aluminum alloy rail shall conform to ASTM B 221 alloy 6061-T6 or 6351-T5 with min. yield 35 ksi, tensile 38 ksi, and elongation of 10% in 2 inches.

RAIL POST DETAILS

NOTES:

All Posts shall be normal to parapet.

All Posts shall be malleable cast iron conforming to ASTM A-47, Grade 35018, galvanized to ASTM A-153.

All Rail Tubing shall conform to applicable requirements of ASTM A-53, Grade B, (pipe or tube) galvanized to ASTM A-120.

Provide 1-⅛" and 2-1/16" galvanized sheet steel shims for 25% of the Posts. Rail element shall be parallel to Grade - high spots shall be ground and low spots shimmed.

If any of the galvanizing coat is damaged or removed during erection, the affected area shall be painted with one coat of zinc paint in accordance with Military Specification MIL-P-26915 Type I, air-dry cure.

Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per lineal foot for STEEL RAILING, TYPE M.

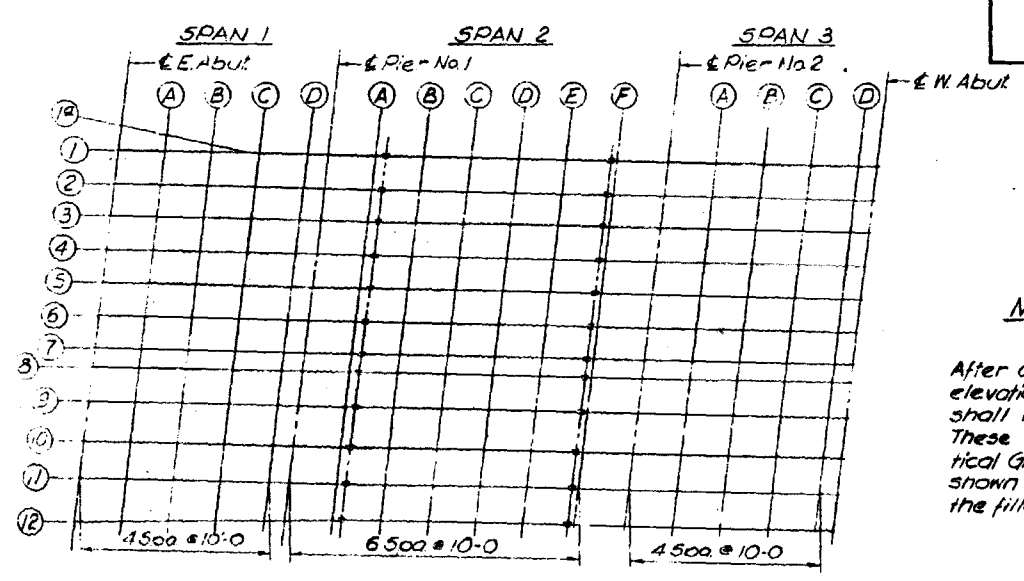
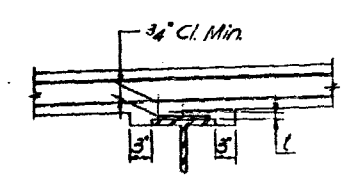
DEAD LOAD DEFLECTION DIAGRAM
(Includes weight of concrete only)

NOTE:
The above deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for Dead Load Deflections as shown in Tables.



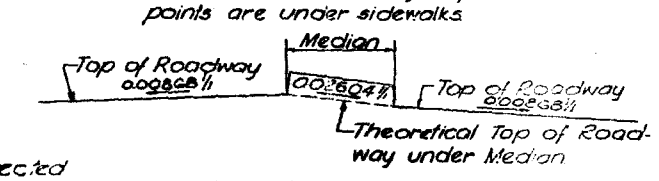
PLAN
Measured along parallel beams.



METHOD OF DETERMINING FILLET HEIGHTS "L"

After all Structural Steel has been erected elevations of the top flanges of the beams shall be taken at the intervals shown in Plan. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load" shown above minus floor thickness equals the fillet heights "L" above top flange of beams.

Note:
Elevations in the Tables are given to the extended Roadway slope where the points are under sidewalks.



DESIGNED BY R.M.R.

Embankment Plan
This embankment required before construction of Piers and Abutments.

GENERAL NOTES

All reinforcement bars shall be lapped 24 diameters unless otherwise shown.

Fasteners shall be high strength. Bolts ¾" ϕ, open holes 13/16" ϕ, unless otherwise noted.

Calculated weight of Structural Steel = 484,510 Lbs.

Diaphragm connections may be adapted to shop welding subject to approval by the Engineer.

The Basic Lead Silico Chromate paint system shall be used for shop and field painting of Structural Steel.

Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.

Anchor bolts shall be set before riveting diaphragms (bolting cross frames) over supports.

The Contractor shall drive five steel test piles in permanent location two at each abutment and one at the pier as directed by the Engineer before ordering the remainder of piles.

Excavation for portions of structures in the embankments shall not be classified.

The concrete rail section above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

DETAIL "A"
Typ. 4 Corners

NOTES:

All Posts shall be normal to parapet

All Aluminum Alloy Extruded Rail shall be supplied in modular lengths of 30 feet, except at the end of bridge or over open joints in bridge deck where the rail shall be attached to a minimum of 2 posts. If the rail is on a horizontal curve of 2300 foot radius or less, the modular lengths may be reduced but shall be attached to a minimum of 2 posts

All joints in rail shall be spliced per detail

Provide 1-⅛" and 2-⅛" Aluminum Shims for 25% of the Posts. Rail elements shall be parallel to Grade - high spots shall be ground and low spots shimmed.

Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per lineal foot for ALUMINUM RAILING, TYPE L

Aluminum alloy rail shall conform to ASTM B 221 alloy 6061-T6 or 6351-T5 with min. yield 35 ksi, tensile 38 ksi, and elongation of 10% in 2 inches.

RAIL POST DETAILS

NOTES:

All Posts shall be normal to parapet.

All Posts shall be malleable cast iron conforming to ASTM A-47, Grade 35018, galvanized to ASTM A-153.

All Rail Tubing shall conform to applicable requirements of ASTM A-53, Grade B, (pipe or tube) galvanized to ASTM A-120.

Provide 1 _ ⅛" and 2 _ 1/16" galvanized sheet steel shims for 25% of the Posts. Rail element shall be parallel to Grade _ high spots shall be ground and low spots shimmed.

If any of the galvanizing coat is damaged or removed during erection, the affected area shall be painted with one coat of zinc paint in accordance with Military Specification MIL-P-26915 Type I, air-dry cure.

Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per lineal foot for STEEL RAILING, TYPE M.

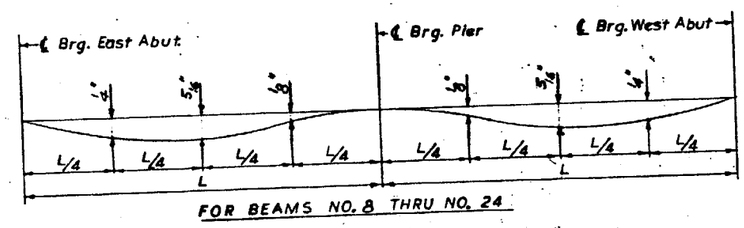
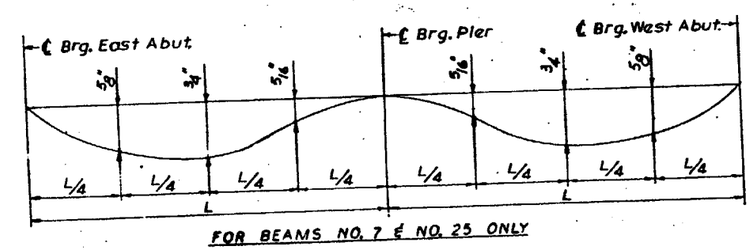
STANDARD FILLET DETAIL

To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown on sheet #8. These elevations subtracted from the "Grade Elevation Adjusted for Dead Load Deflections" minus slab thickness equal fillet height "t" above top of beams.

NOTE: Elevations in the Tables are given to the extended roadway, when the points are under the Sidewalk or Island.



FOR BEAMS NO. 8 THRU NO. 24



FOR BEAMS NO. 7 & NO. 25 ONLY

DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only)

NOTE: The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections.

For location of Points see Sh. No 8.

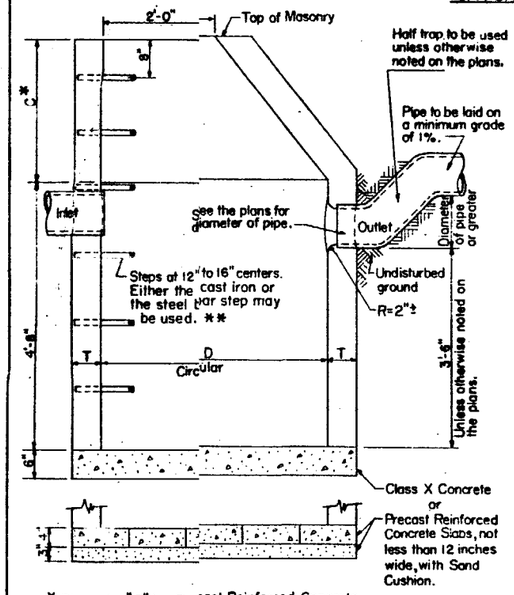
STANDARD DESIGN

CATCH BASINS TYPE A AND TYPE B

CATCH BASIN TYPE A



* Dimension "C" for Precast Reinforced Concrete Risers may vary from the dimension given to plus 6 inches.

Notes:
All Catch Basins shall be 4'-0" in diameter unless otherwise noted on plans.

ALTERNATE MATERIALS FOR WALLS	D	C	T (Min.)
Concrete Masonry Units	4'-0"	2'-6"	5"
	5'-0"	3'-9"	5"
Building Brick, Grade SW, from Clay or Shale	4'-0"	2'-6"	8"
	5'-0"	3'-9"	8"
Precast Reinforced Concrete Risers	4'-0"	2'-6"	4"
	5'-0"	3'-9"	5"
Monolithic Concrete	4'-0"	2'-6"	6"
	5'-0"	3'-9"	6"
Concrete Building Brick, Grade A	4'-0"	2'-6"	8"
	5'-0"	3'-9"	8"

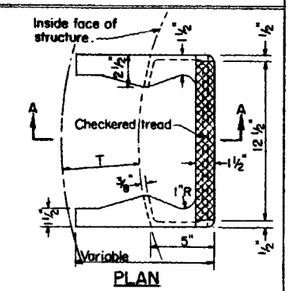
Type A Catch Basin to be provided with:

Type 1 Frame, Open Lid	or Type 10 Frame
	or Type 11 Frame
or Type 3 Frame	or Type 12 Frame
or Type 5 Frame, Open Lid	or Type 15 Frame
or Type 6 Frame	
or Type 8 Grate	
or Type 9 Frame	

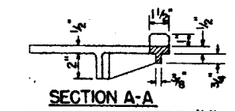
The steps shall be omitted for work in Cook County.

The contract unit price for Catch Basins, Type A, shall include the frame and lid or grate specified; also, furnishing and placing the metal steps and sand cushion when required.

Steps shall be embedded into wall a minimum of 4 inches. Steps shall not be extended on the outside.



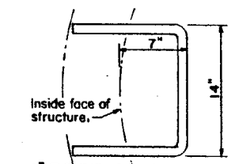
PLAN



SECTION A-A

CAST IRON STEPS **

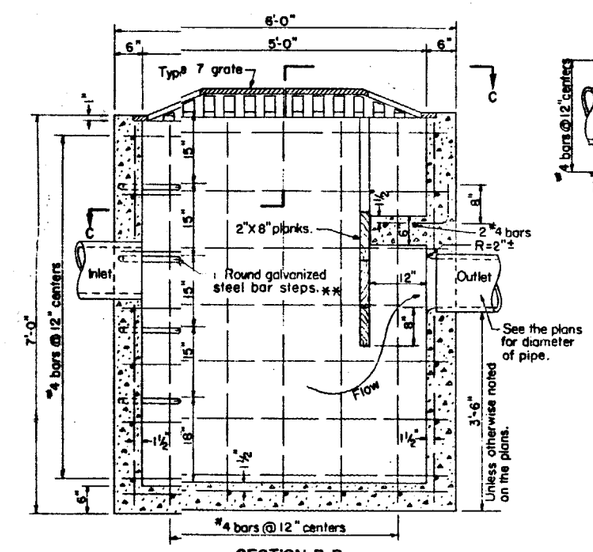
Cast iron steps shall be Gray Iron conforming to the requirements of Article 710.17 of the Standard Specifications.



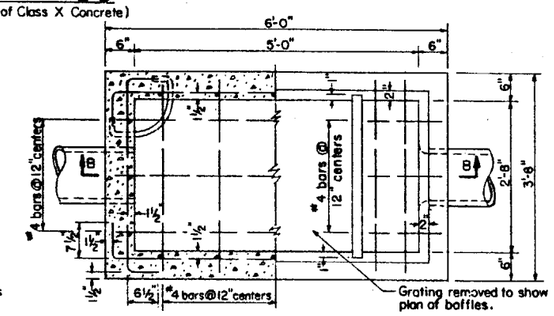
1" ROUND GALVANIZED STEEL BAR STEP **

CATCH BASIN TYPE B

(To be constructed of Class X Concrete)



SECTION B-B



SECTION C-C

Notes:
Lumber shall be 1600 f dense southern pine or 1700 f dense douglas fir, S4S, untreated, meeting the requirements of Section 711 of the Standard Specification.

The contract unit price for Catch Basins, Type B, shall include the Type 7 Grate; also, furnishing and placing the metal steps.

** The cast iron and steel bar steps as detailed hereon are typical. Steps of other design and material that will conform to the minimum requirements of the steps shown, may be used when approved by the Engineer.

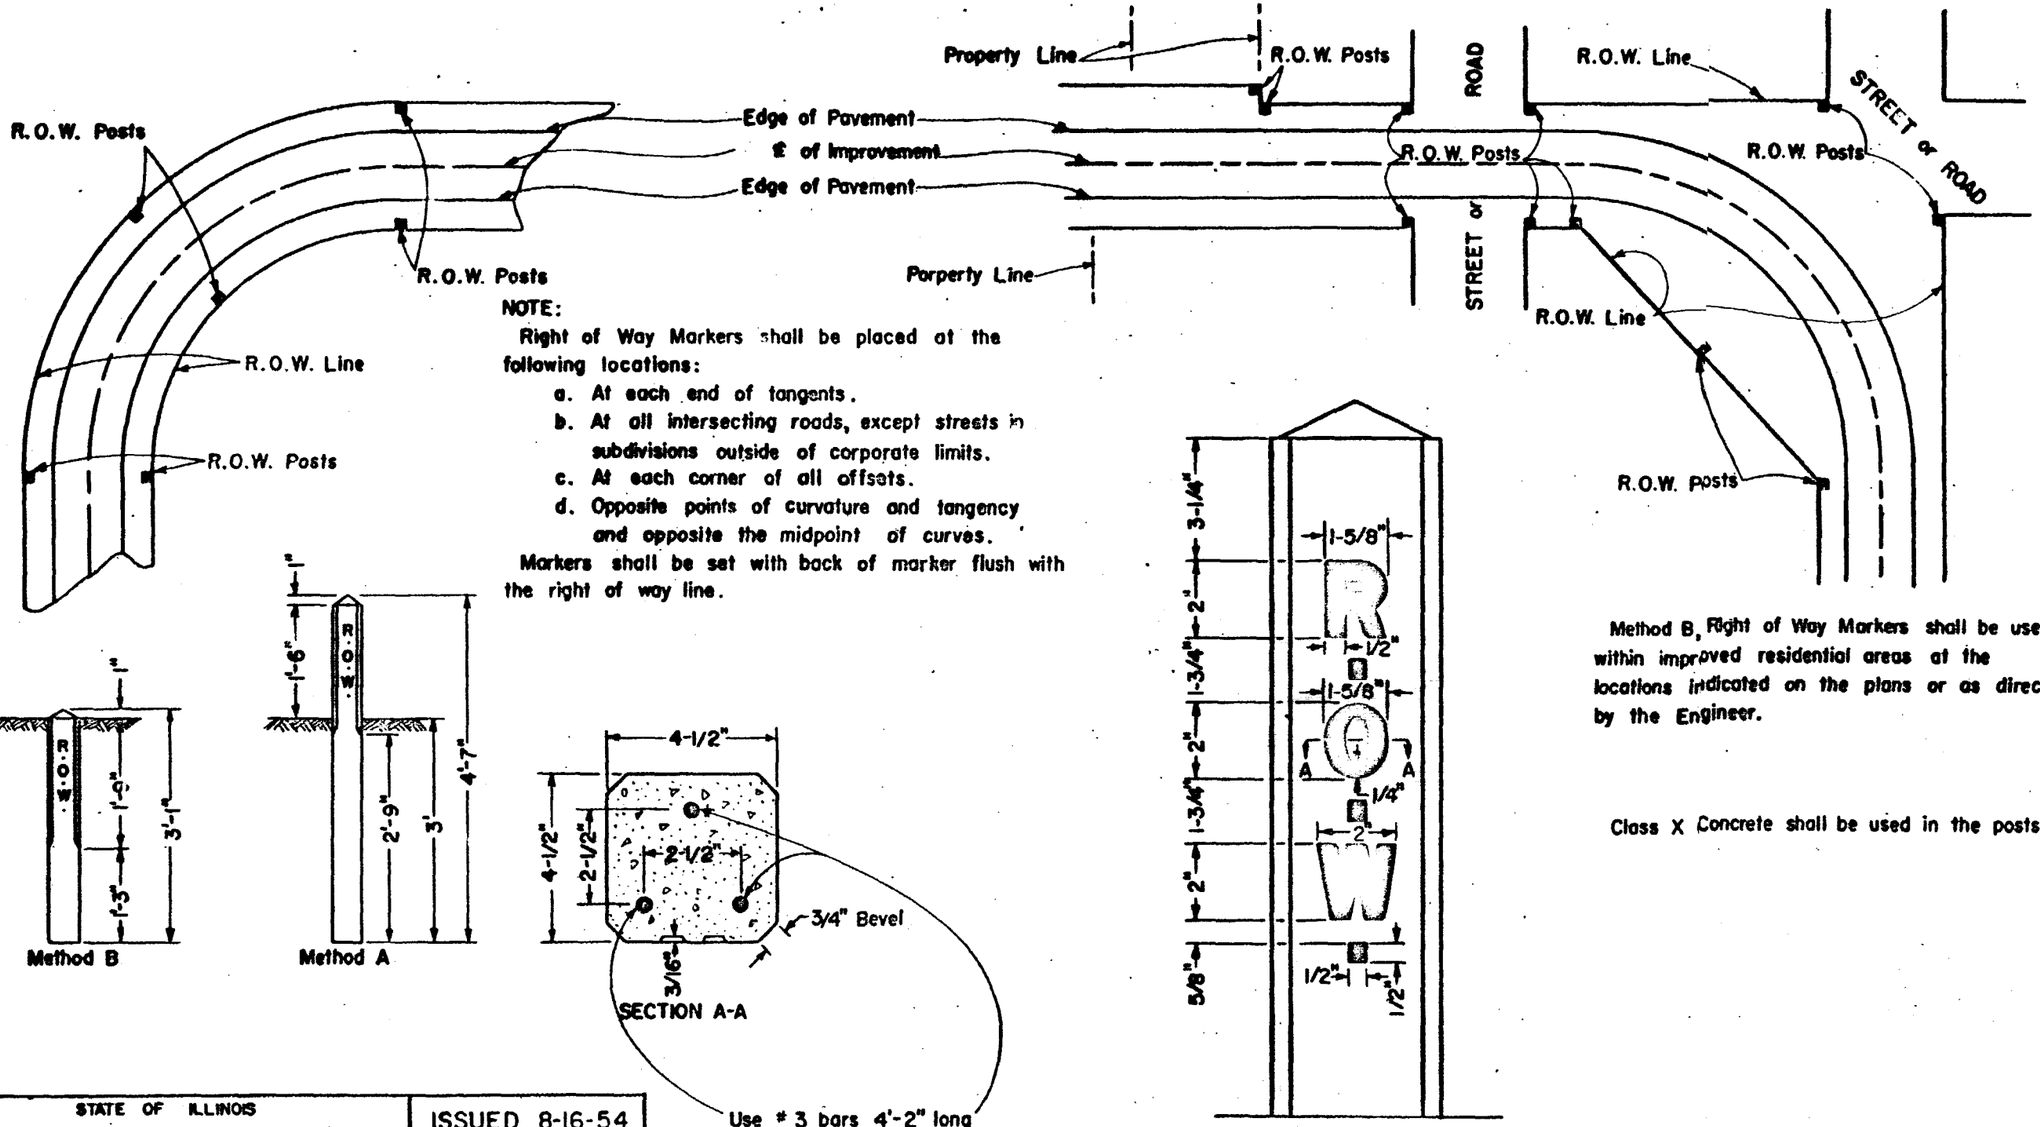
STANDARD 1686-3
(Half Size) W.F.

STANDARD DESIGN FOR RIGHT OF WAY MARKERS



NOTE:

Right of Way Markers shall be placed at the following locations:

a. At each end of tangents.
b. At all intersecting roads, except streets in subdivisions outside of corporate limits.
c. At each corner of all offsets.
d. Opposite points of curvature and tangency and opposite the midpoint of curves.

Markers shall be set with back of marker flush with the right of way line.

Method B, Right of Way Markers shall be used within improved residential areas at the locations indicated on the plans or as directed by the Engineer.

Class X Concrete shall be used in the posts.

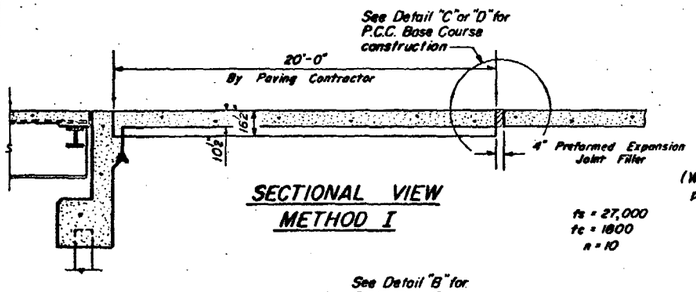
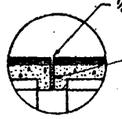
P.C.C. BASE COURSE (16½"-10½"-16½")

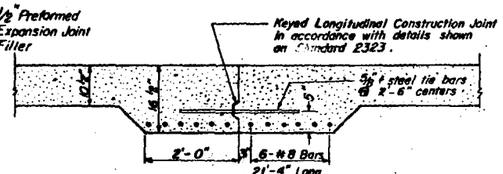


SECTIONAL VIEW
METHOD I

fs = 27,000
fc = 1800
n = 10

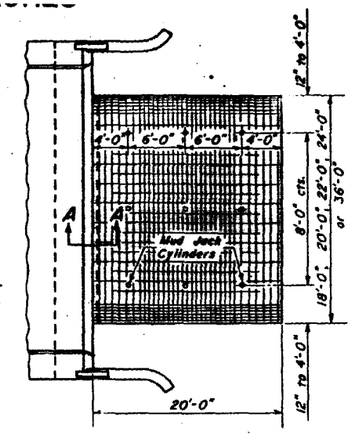


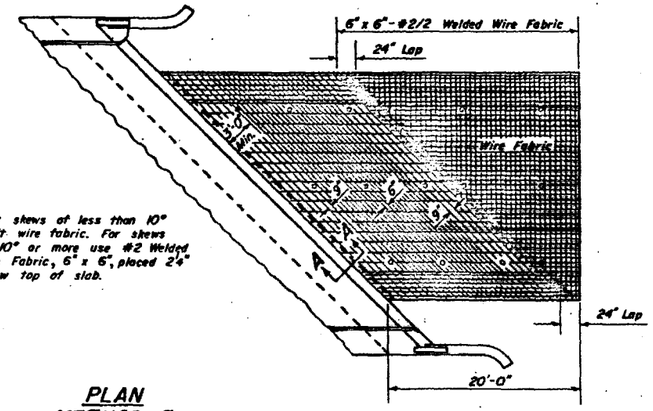
DETAIL "B"
(When bituminous surface is being placed on bridge and approach)



OPTIONAL LONGITUDINAL CONSTRUCTION JOINT

As approved by the Engineer, the Contractor may elect to reduce the widths of pour by use of the Optional Longitudinal Construction Joint shown. Joints shall be located at the edge of a Traffic Lane.

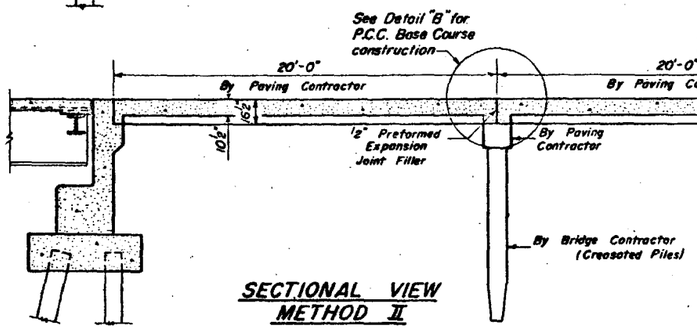




For skews of less than 10° omit wire fabric. For skews of 10° or more use #2 Welded Wire Fabric, 6" x 6", placed 2" below top of slab.

PLAN
METHOD I

Expanded Metal weighing not less than 78 Lbs. per 100 sq. ft. or a welded bar mat weighing not less than 78 Lbs. per 100 sq. ft. having members of equal size in both directions and spaced not over 8" apart may be used instead of the #2 Welded Wire Fabric, 6" x 6", provided the expanded metal or bar mat is furnished at no additional cost to the State.



SECTIONAL VIEW
METHOD II

fs = 27,000

(When bituminous surface is being placed on bridge and approach)

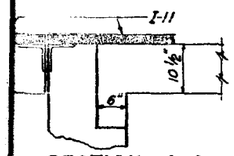
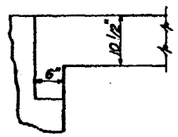
LONGITUDINAL EXPANSION JOINT

To be used when Approach Slabs are greater than 36'-0" wide. Joint shall be placed at edge of Traffic Lane nearest to the ℄ of the total width of Approach Slab.

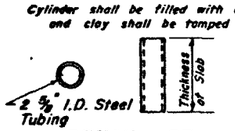


SECTION A-A
(When bituminous surface is being placed on bridge and approach)



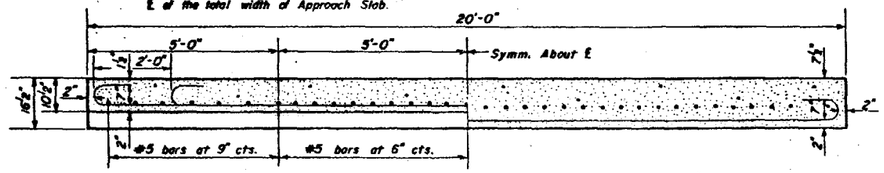
SECTION A-A
(P.C.C. Pavement construction)

Cylinder shall be filled with clay and clay shall be tamped



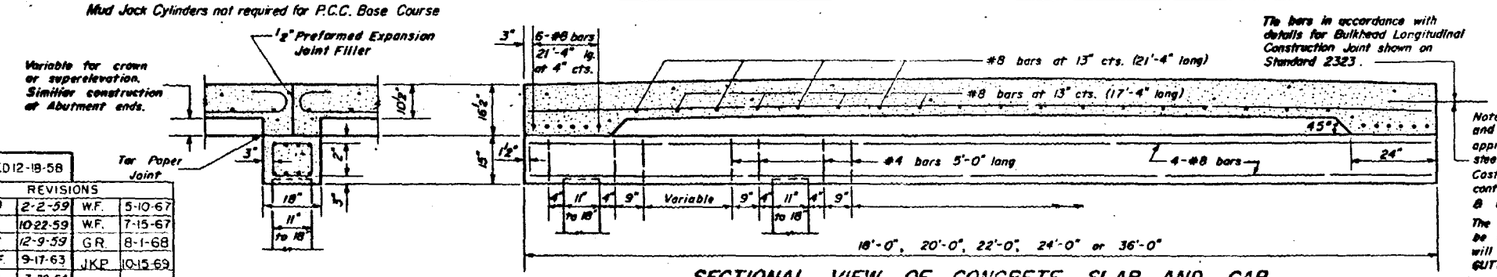
DETAIL OF
MUD JACK CYLINDER

Mud Jack Cylinders not required for P.C.C. Base Course



LONGITUDINAL SECTION THRU
CENTER OF SLAB

LONGITUDINAL SECTION THRU
THICKENED EDGE OF SLAB



Tie bars in accordance with details for Bulkhead Longitudinal Construction Joint shown on Standard 2323.

SECTIONAL VIEW OF CONCRETE SLAB AND CAP

Note: When road plans show curb and gutter or gutter adjacent to approach slabs place ½" ϕ steel tie bars at 2'-6" cts. Cost of tie bars included in contract unit price for Curb & Gutter or Gutter.

The transition for gutter shall be made in 100 feet and will be paid for as CONCRETE GUTTER, of the type specified.

The transition for curb and gutter shall be made in 20 feet and will be paid for as COMBINATION CURB and GUTTER, of the type specified.

GENERAL NOTES

FOR P.C.C. PAVEMENT

The slab or slabs will be paid for at the contract unit price for PORTLAND CEMENT CONCRETE PAVEMENT (16½"-10½"-16½").

The concrete cap will be paid for at the contract unit price for CLASS X CONCRETE.

All Reinforcement Bars will be paid for at the contract unit price for REINFORCEMENT BARS, except as noted.

The Welded Wire Fabric, Mud Jack Cylinders, and Preformed Expansion Joint Filler shall be included in the unit price bid for PORTLAND CEMENT CONCRETE PAVEMENT (16½"-10½"-16½").

Preformed Expansion Joint Filler shall conform to Section 715 of the Standard Specification.

Width of Bridge Approach Slab pours shall be determined before the reinforcement bars are fabricated.

The Contractor shall, after completion of the finishing operations, mark the location of the Mud Jack Cylinders.

FOR P.C.C. BASE COURSE

The slab or slabs will be paid for at the contract unit price for PORTLAND CEMENT CONCRETE BASE COURSE (16½"-10½"-16½").

The concrete cap will be paid for at the contract unit price for CLASS X CONCRETE.

All Reinforcement Bars will be paid for at the contract unit price for REINFORCEMENT BARS, except as noted.

The Welded Wire Fabric, Concrete Headers, and Preformed Expansion Joint Filler shall be included in the unit price bid for PORTLAND CEMENT CONCRETE BASE COURSE (16½"-10½"-16½").

Preformed Expansion Joint Filler shall conform to Section 715 of the Standard Specification.

Width of Bridge Approach Slab pours shall be determined before the reinforcement bars are fabricated.

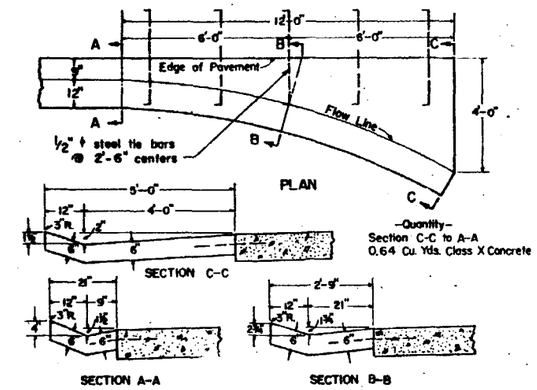
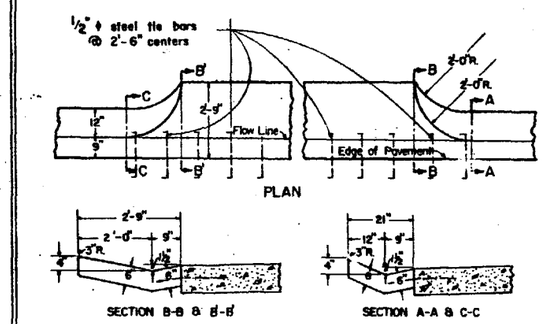
STANDARD INLET FOR TYPE B GUTTER



—Quantity—
Section C-C to A-A
0.64 Cu. Yds. Class X Concrete

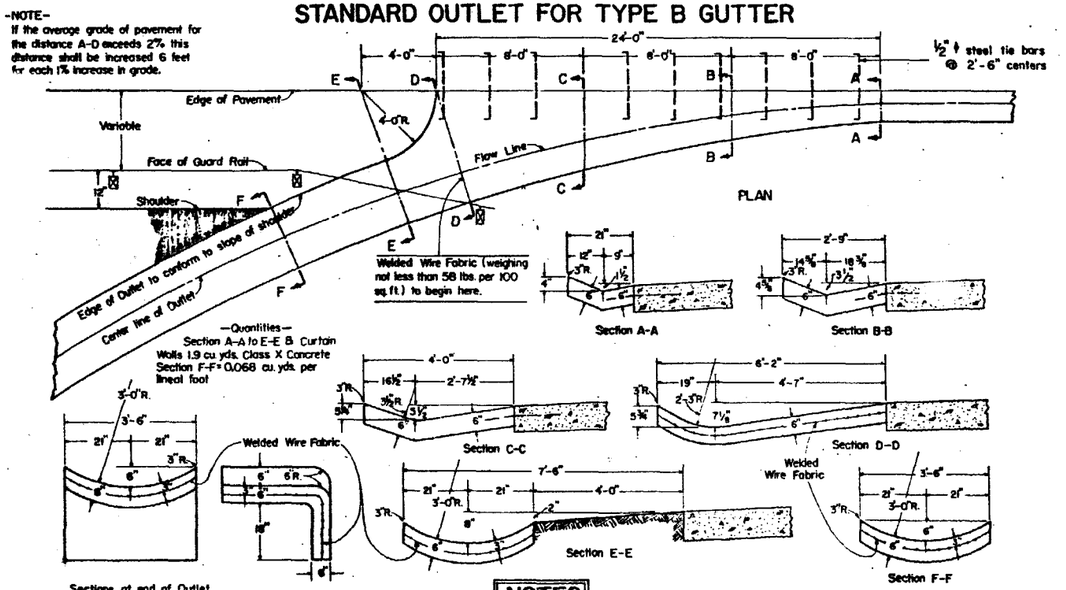
STANDARD ENTRANCE FOR TYPE B GUTTER



—Quantities—
Section B'-B' to B-B = 0.051 cu. yd. per lineal ft.
Section C-C to B'-B' + B-B to A-A = 0.176 cu. yd.

STANDARD OUTLET FOR TYPE B GUTTER

-NOTE-
If the average grade of pavement for the distance A-D exceeds 2% this distance shall be increased 6 feet for each 1% increase in grade.



—Quantities—
Section A-A to E-E & Curtain Walls 1.9 cu. yds. Class X Concrete
Section F-F = 0.068 cu. yds. per lineal foot

NOTES

Class X Concrete shall be used throughout.

Gutter, Gutter Inlet, Gutter Outlet and Gutter Entrance shall be tied to the pavement in accordance with details for Bulkhead Longitudinal Construction Joint shown on Standard 2323.

The gutter will be paid for at the contract unit price per lineal foot for Concrete Gutter Type B, which price shall include the cost of the tie bars. The Gutter Inlet, Gutter Outlet and Gutter Entrance will be paid for at the contract unit price per cubic yard for Class X Concrete, which price shall include the cost of the tie bars and the welded wire fabric reinforcement.

Contraction Joints of a type similar to that used in the adjacent pavement shall be installed in the Type B Gutter in prolongation with the joints in the pavement. The details of the transverse joints in the Type B Gutter shall be approved by the Engineer. If contraction joints are not provided in the pavement, contraction joints are not required in the Type B Gutter.

The cost of contraction joints, including dowel bars, shall be included in the contract unit price per lineal foot for Concrete Gutter Type B and the contract unit price per cubic yard for Class X Concrete.

DEPARTMENT OF PUBLIC WORKS & BUILDINGS
DIVISION OF HIGHWAYS

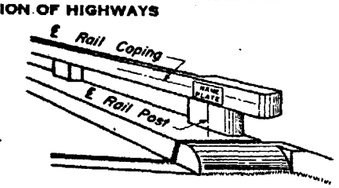
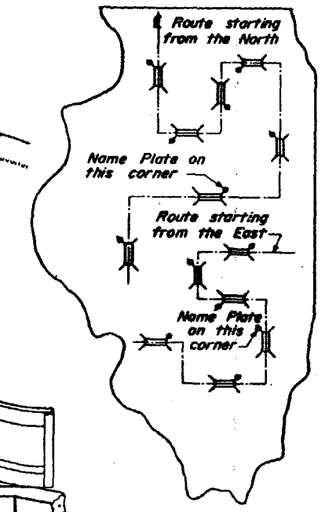
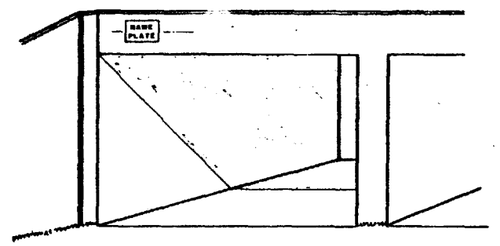
FOR END POST MOUNTED



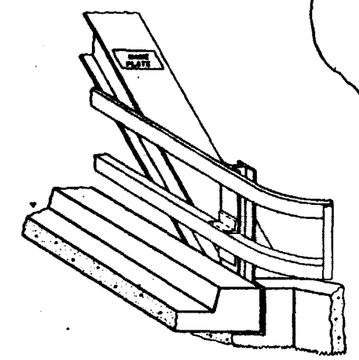
FOR CONCRETE RAILS



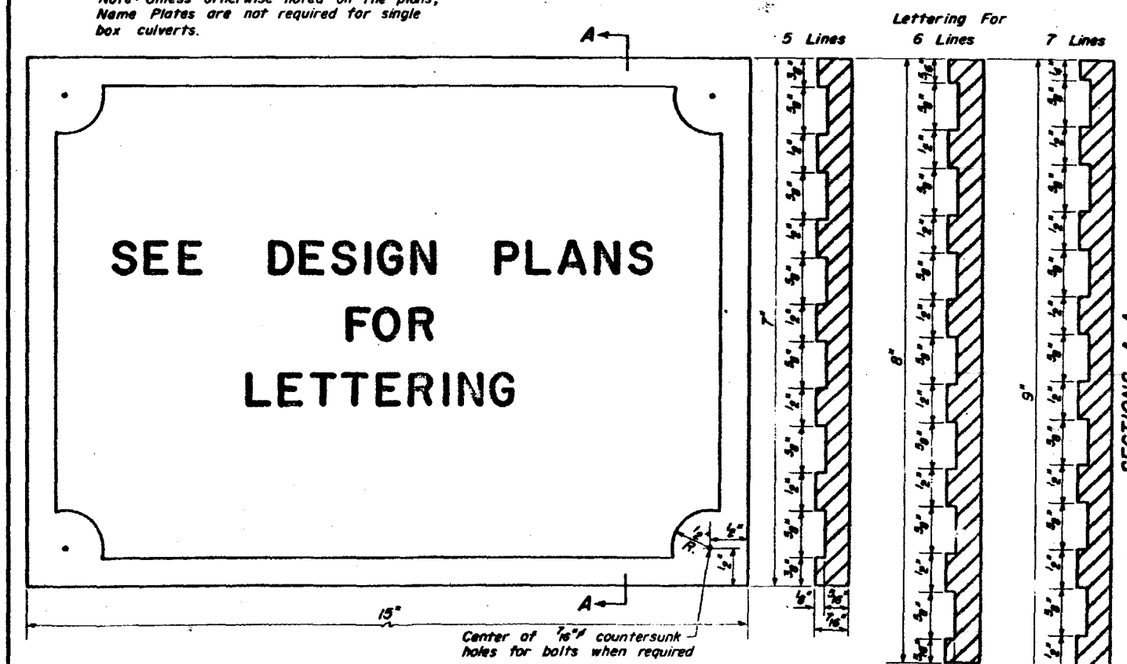


FOR MULTI-SPAN CULVERTS

Note: Unless otherwise noted on the plans, Name Plates are not required for single box culverts.



FOR TRUSSES



Material: Best quality brass or bronze.

Border & Lettering: Raised 1/8 inch. Square cut and not tapered. Top surface polished.

Fastenings:
- For Concrete Rails, Culvert Headwalls & Subways -- Four lugs at least three inches long, cast on back of plate.
- For Steel Truss Span - - - - Plate to be fastened on steel member at fabricating shop by brazing around entire perimeter of plate.
- For Steel Rails - - - - - - - Plate to be bolted on with 4 - 3/8"ϕ brass or bronze machine bolts with countersunk head.

Placings:
- For Concrete Rails - - - - - Plate to be centered on ℄ of rail post and ℄ of handrail coping.
- For Steel Truss Span - - - Braze to end post about five feet above roadway.
- For Steel Rails - - - - - - Place midway between horizontal rail members.
- For Subways - - - - - - - - See design plans for location.

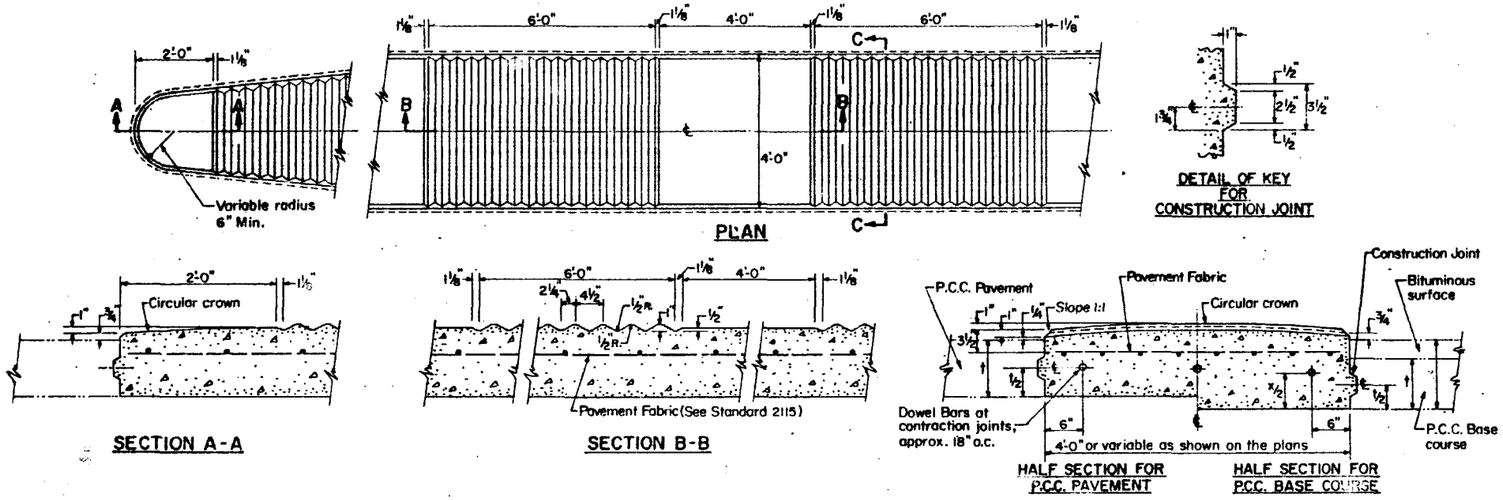
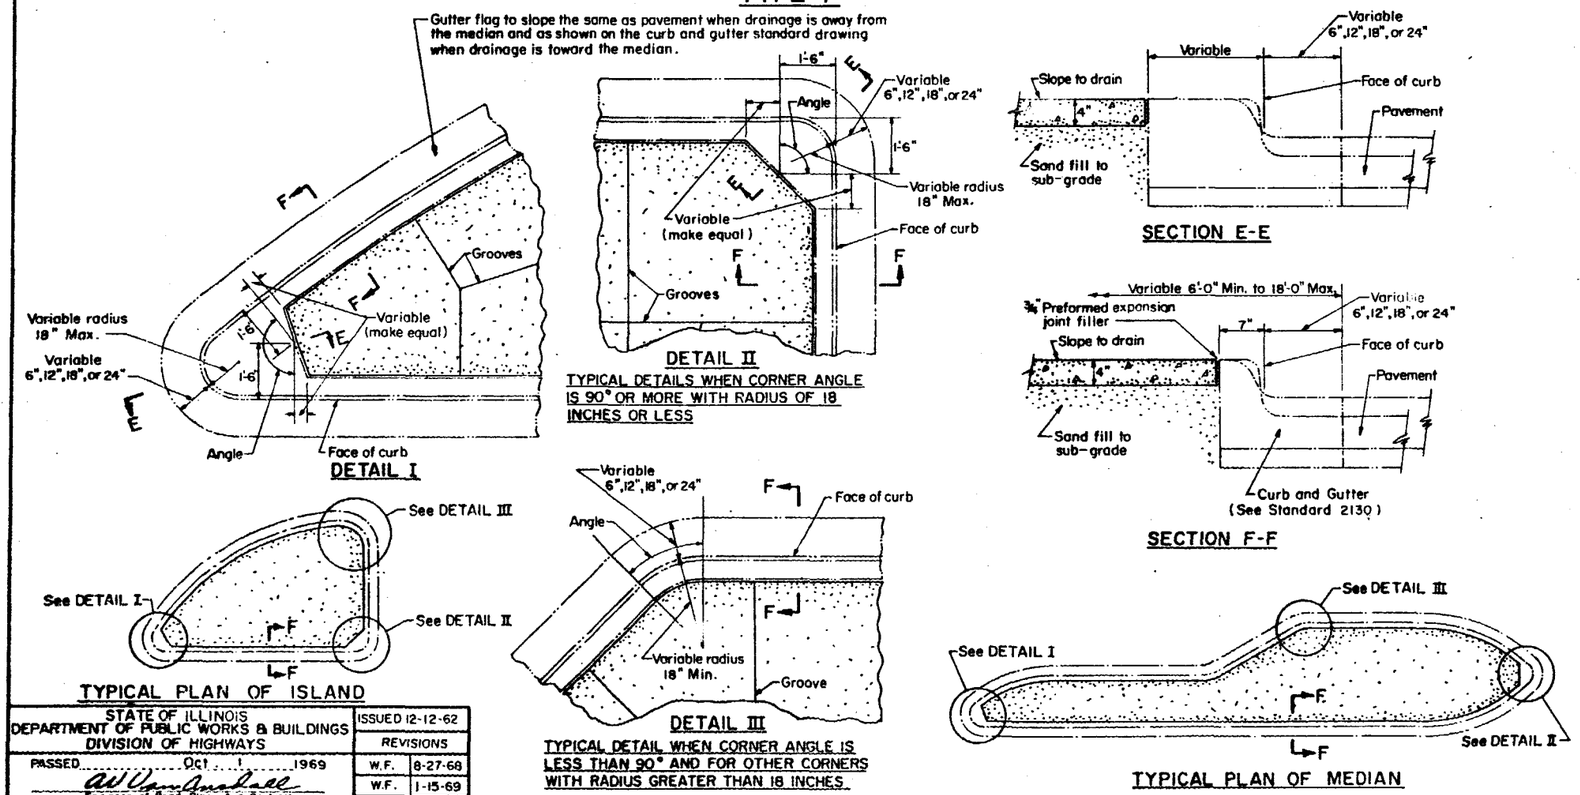
STANDARD DESIGN
CONCRETE MEDIANS

TYPE C-4



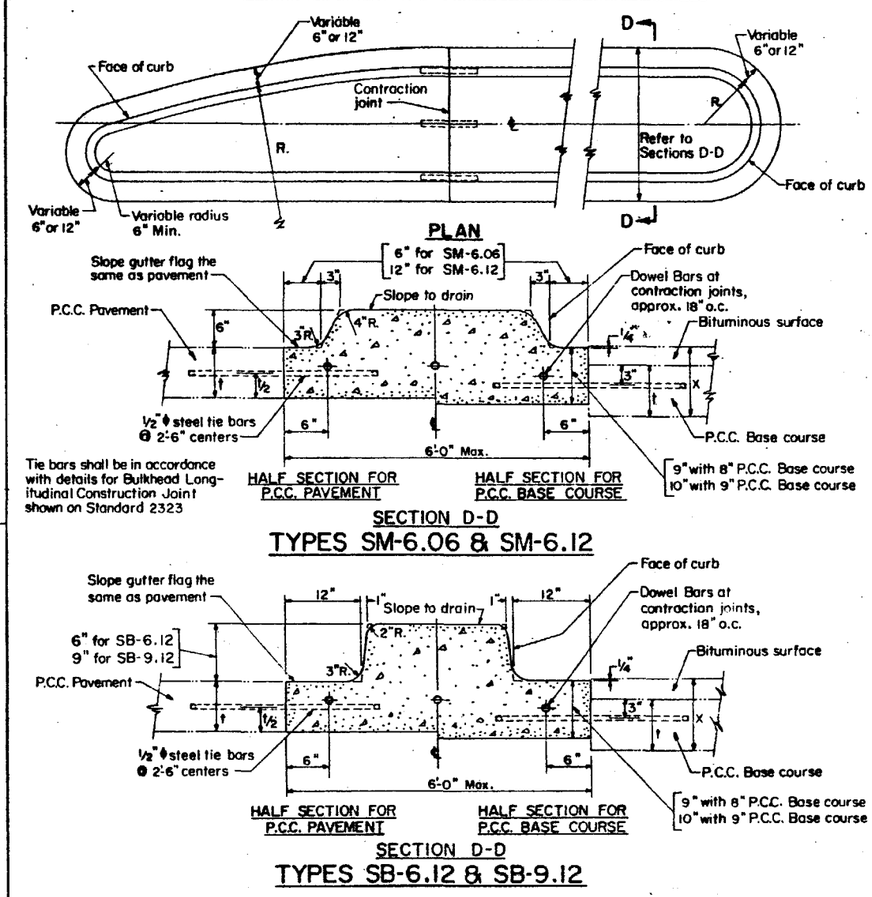
TYPE P



STATE OF ILLINOIS DEPARTMENT OF PUBLIC WORKS & BUILDINGS DIVISION OF HIGHWAYS	ISSUED 12-12-62	
	REVISIONS	
PASSED Oct. 1 1969	W.F.	8-27-68
Engineer of Road Plans And Contracts	W.F.	1-15-69
APPROVED Oct. 1 1969	W.F.	10-1-69
Engineer of Design		

Redrawn 8-27-68

TYPES SM-6.06, SM-6.12, SB-6.12 & SB-9.12



GENERAL NOTES

Dimension "t" is equal to the adjacent pavement edge thickness or base course edge thickness.

Dimension "X" is equal to the adjacent base course edge thickness plus the bituminous surface edge thickness.

Contraction joints of a type similar to that used in the adjacent pavement shall be installed in the concrete median in prolongation with the joints in the pavement. The details of the transverse joints in the concrete median shall be approved by the Engineer. If contraction joints are not provided in the pavement, contraction joints will not be required in the concrete median. The cost of contraction joints including furnishing and placing dowel bars shall be included in the unit price bid per square foot for the particular type of Concrete Median specified.

The cost of furnishing and placing pavement fabric in the median Type C-4 shall be included in the unit price bid per square foot for CONCRETE MEDIAN, TYPE C-4.

The Type P median 4 inch concrete surface shall be constructed in accordance with the applicable provisions of Section 624 of the Standard Specifications. This work shall be measured in place, and the area computed in square feet; payment will be made at the contract unit price per square foot for CONCRETE MEDIAN SURFACE 4 INCHES which price shall include the cost of furnishing and placing the expansion joints and sand fill.

The curb and gutter adjacent to the Type P median shall be constructed and paid for in accordance with Section 616 of the Standard Specifications which price shall include the cost of providing the solid concrete corners as shown.

The earth work shall be considered as being incidental to Earth Excavation.

Plan views of medians shown are typical. Median layout and radii shall be as shown on the plans.

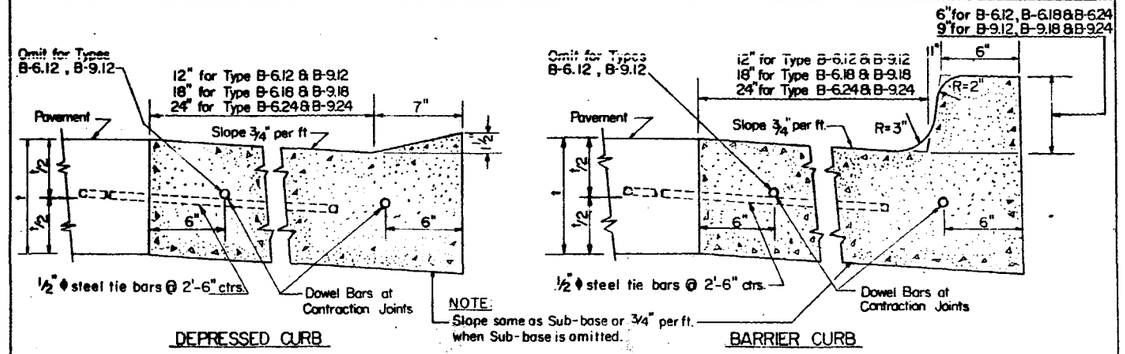
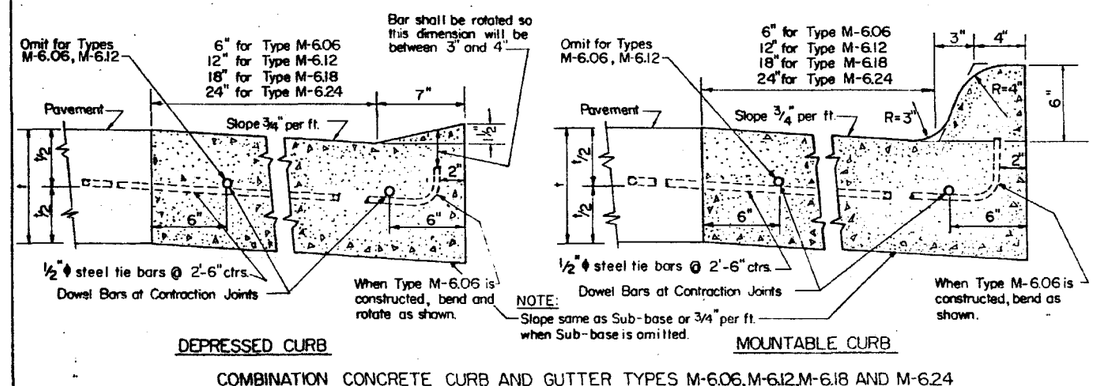
STANDARD DESIGN

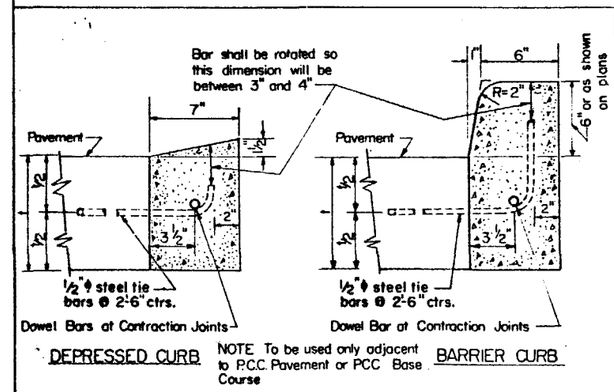
CONCRETE CURB AND COMBINATION CONCRETE CURB AND GUTTER



COMBINATION CONCRETE CURB AND GUTTER TYPES B-6.12, B-6.18, B-6.24, B-9.12, B-9.18, AND B-9.24

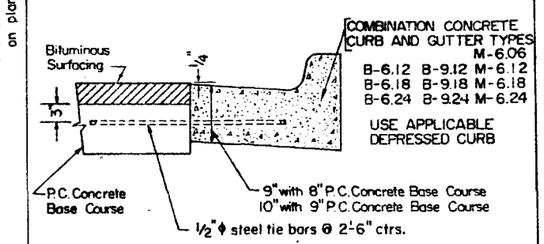


COMBINATION CONCRETE CURB AND GUTTER TYPES M-6.06, M-6.12, M-6.18 AND M-6.24



CONCRETE CURB TYPE B

TYPICAL SECTION SHOWING CONSTRUCTION OF COMBINATION CONCRETE CURB AND GUTTER ADJACENT TO P.C. CONCRETE BASE COURSE AND BITUMINOUS SURFACING



NOTE
When tie bars are placed in existing base, the cost of furnishing, drilling, setting tie bars, mortaring, etc. shall be included in the unit price bid per lineal foot for the type of Combination Concrete Curb and Gutter constructed.

Tie bars shall be in accordance with details for Bulkhead Longitudinal Construction Joint shown on Standard 2323

GENERAL NOTES

"t" = Thickness of pavement

DEPRESSED CURBS — The top of curbs shall be depressed where the curb and gutter is constructed across alleys and for private drives or where directed by the Engineer.

CONTRACTION JOINTS — Contraction Joints of a type similar to that used in the adjacent pavement shall be installed in the Curb or Curb and Gutter in prolongation with the joints in the pavement. The details of the transverse joints shall be approved by the Engineer. If contraction joints are not provided in the pavement, contraction joints will not be required in the Curb or Curb and Gutter. The cost of contraction joints including dowel bars and the cost of furnishing and installing tie bars shall be included in the unit price bid per lineal foot for CONCRETE CURB or for the particular type of COMBINATION CONCRETE CURB AND GUTTER.

Where Curb and Gutter are not adjacent to P.C. Concrete Pavement or P.C. Concrete Base Course, tie bars, contraction joints and dowel bars shall be omitted.

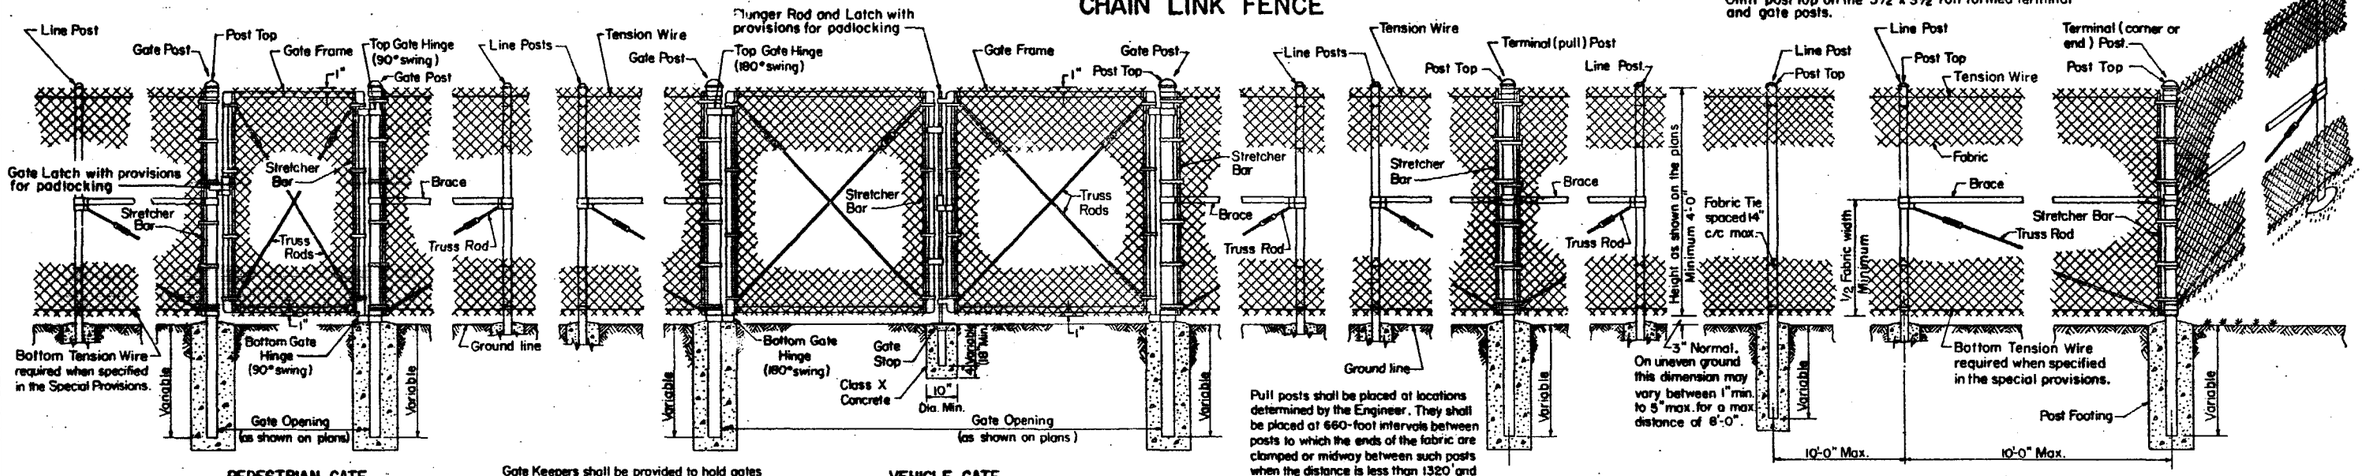
STANDARD DESIGN
CHAIN LINK FENCE

NOTE- For 4-foot fence, the horizontal braces and truss rods adjacent to terminal posts and gate posts shall be omitted. *Omit post top on the 3½" x 3½" roll formed terminal and gate posts.*



PEDESTRIAN GATE ARRANGEMENT

Gate Keepers shall be provided to hold gates in open position and they shall be located and installed as directed by the Engineer.

VEHICLE GATE ARRANGEMENT

PULL POST ARRANGEMENT

LINE POST ARRANGEMENT

CORNER OR END POST ARRANGEMENT

GENERAL NOTES

LINE POSTS— The line posts shall be either galvanized steel pipe or galvanized structural shapes of sizes and weights specified in Table I.

TERMINAL POSTS (End, Corner, or Pull) — The terminal posts shall be either 2⅜" O.D. galvanized steel pipe weighing 3.65# per lineal foot or 2½" square galvanized hollow structural tubing weighing 4.32# per lineal foot or 3½" x 3½" galvanized roll formed section as detailed. The tubing shall be galvanized inside and outside in accordance with the requirements stipulated for structural shapes.

GATE POSTS— The gate posts shall be either 3½" x 3½" galvanized roll formed section as detailed or the galvanized steel pipe or galvanized square hollow structural tubing of sizes and weights specified in Table II. The tubing shall be galvanized inside and outside in accordance with the requirements stipulated for structural shapes.

HORIZONTAL BRACES— The horizontal braces shall be either 1.66" O.D galvanized steel pipe weighing 2.27# per lineal foot or 1.31" x 1.5" galvanized "H" section structural shape weighing 2.25# per lineal foot or 1⅝" x 1¼ galvanized roll formed section as detailed.

TENSION WIRE — The tension wire shall be stretched tight with galvanized turnbuckles spaced at intervals of not more than 1,000 feet.

GATE FRAME— The gate frames shall be 1.66" O.D. galvanized steel pipe weighing 2.27# per lineal foot.

STRETCHER BARS— The stretcher bars shall be galvanized flat steel bar not less than ¼" x ¾" and the stretcher bar bands shall be galvanized flat steel bar not less than ⅛" x 1" with a ⅜" ϕ galvanized carriage bolt.

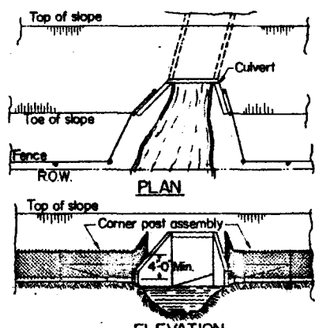
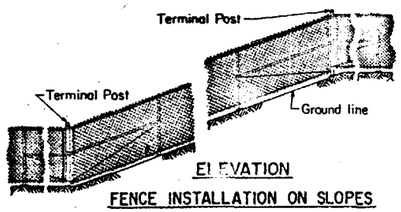
FENCE INSTALLATION OVER STREAMS



PLAN

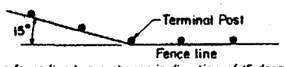
ELEVATION

FENCE INSTALLATION TO HEADWALLS



ELEVATION

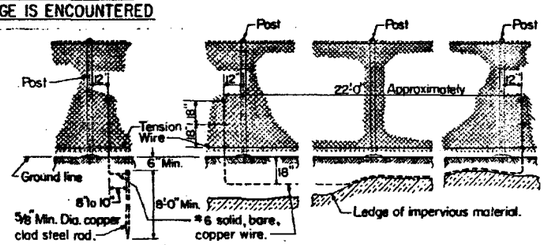
FENCE INSTALLATION ON SLOPES



Where fence line has a change in direction of 15 degrees or more, a terminal post shall be placed as shown above.

Where angle is less than 15 degrees and existing conditions require terminal post, they shall be placed as directed by the Engineer.

* The 3½" x 3½" Roll formed section as detailed may be used as gate posts for single gate up to 6 foot and double gate up to 12 foot.



STANDARD GROUND

COUNTERPOISE GROUND (ALTERNATE)

PROTECTIVE ELECTRICAL GROUNDS

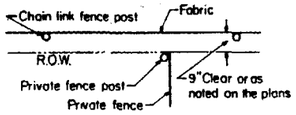
NOTE-

Continuous fence shall be grounded at intervals not exceeding 500 feet in urban areas and 1000 feet in rural areas. Except there shall be a ground not exceeding 100 feet from a gate in each section of the fence adjacent to a gate.

Fence under a power line shall be grounded by three grounds, one directly under the crossing and one on each side, 25 to 50 feet away. A single ground shall be located directly under each telephone wire or cable crossing.

The counterpoise ground shall be used only where it is impossible to drive a ground rod because of an impervious earth structure.

The ground wire shall be connected to the fabric and the ground rod by a mechanical clamp of cast bronze body and bronze or stainless steel bolts and washers. When a tension wire is required, the bottom connection of the ground wire shall be made to the tension wire.



PRIVATE FENCE TERMINAL

NOTE #1

The roll formed sections shall be fabricated from material having a tensile strength of 45,000 to 53,000 p.s.i. and a yield strength of 30,000 to 38,000 p.s.i.

The roll formed sections shall be galvanized in accordance with the requirements stipulated for structural shapes.

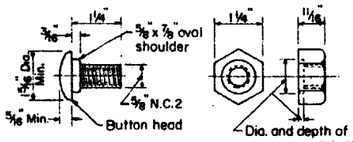
RAIL ELEMENT SPLICE



SPLICE BOLT & NUT (Galv.)

POST BOLT IS THE SAME EXCEPT FOR LENGTH AND WITH STANDARD HEX. NUT

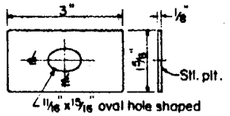


PLATE WASHER "F" (Galv.)

NOTE

Plate washer "F" shall be used at all locations where rail element is bolted to a post.

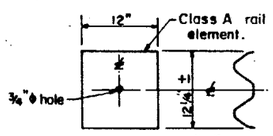

PLATE "A"

NOTE:

All concrete, reinforcement bars, and accessories used in the placing of the guard rail shall be incidental to the contract.

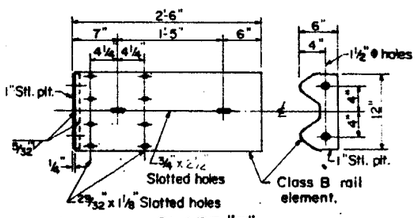

PLATE "B"

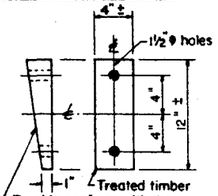

WEDGE "C"

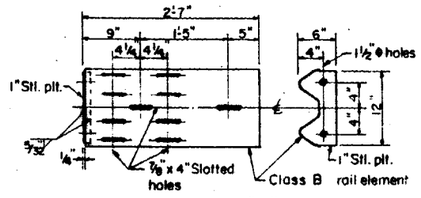

PLATE "D"

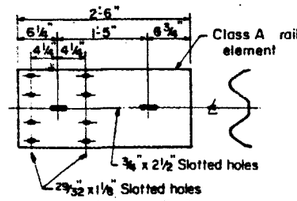

PLATE "E"

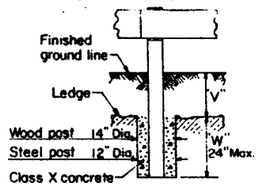
NOTE #1

Rail element, steel posts, and all the steel supports, fastenings and accessories shall be galvanized.

Steel brackets Detail "H" and "J", steel block-outs, and steel posts may be provided with additional holes so that these items will not be required to be made right and left handed.

Steel brackets Detail "H" and "J" may be fabricated from W6x8.5 beam in lieu of the 3/16" plate specified, by cutting web of beam as shown dotted and welding together on both sides.

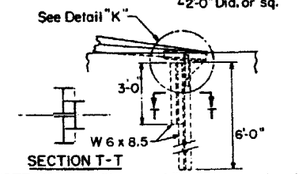


Dimensions given are for 6 foot long post, for other length post change the "V" dimension correspondingly

"V" + "W" shall not exceed 44½". When "V" is 0" to 20½", "W" = 24", and the post shall be shortened as required. When "V" exceeds 20½", "W" shall be decreased correspondingly. When "V" is 6" or less, post hole shall be filled to ground line with concrete.

Ledge line is top of a rock ledge or hard slag fill.

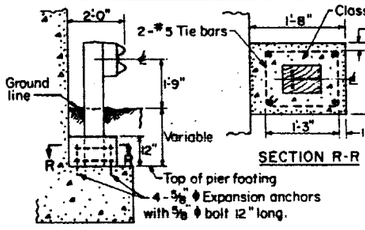
FOOTING FOR POST WHEN IMPERVIOUS MATERIAL IS ENCOUNTERED



SECTION T-T

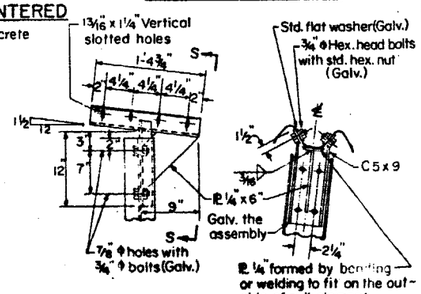
NOTE: When conditions prohibit driving, end post shall be constructed as shown above.

ALTERNATE FOR DRIVEN END POST

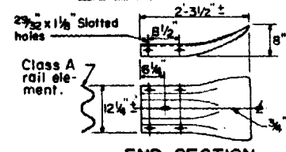


SECTION R-R

POST ANCHOR AT PIERS



DETAIL "K"



END SECTION

NOTE:

End section shall be used only when specified on the contract plans. Cost incidental to guard rail.

See Standard 2231 for Typical Applications of the Steel Plate Beam Guard Rail

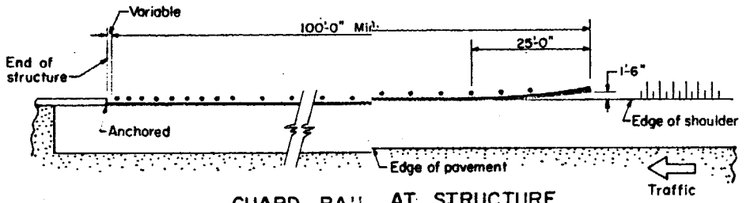
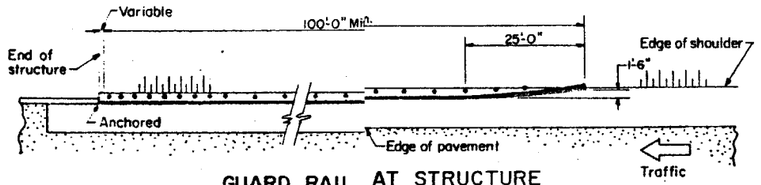
STANDARD DESIGN

TYPICAL APPLICATIONS OF STEEL PLATE BEAM GUARD RAIL

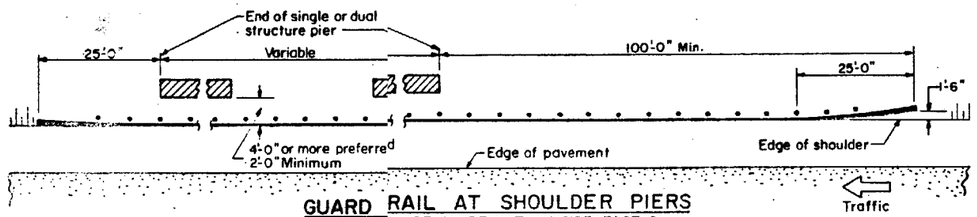


GUARD RAIL AT STRUCTURE
INSIDE FACE OF STRUCTURE IS FULL WIDTH OF SHOULDER

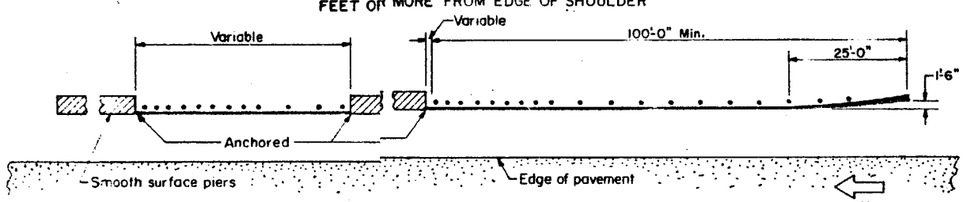


GUARD RAIL AT STRUCTURE
INSIDE FACE OF STRUCTURE IS LESS THAN FULL WIDTH OF SHOULDER

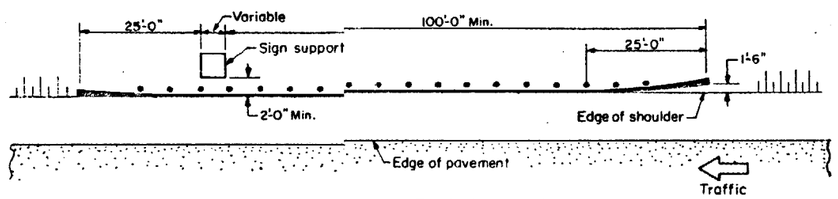
The first 25 feet of Guard Rail that is adjacent to and anchored to a structure or pier shall have the close post spacing as noted and shown on Standard 2230



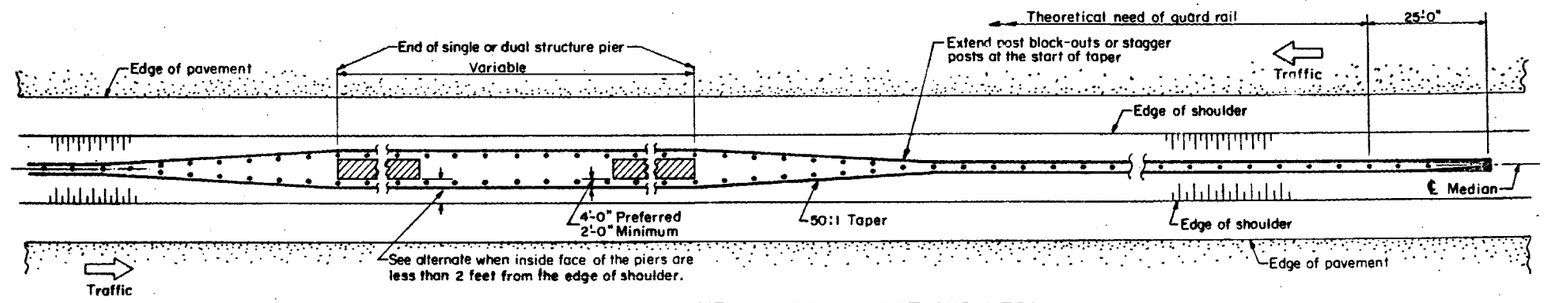
GUARD RAIL AT SHOULDER PIERS
PIER ON SIDE SLOPE WITH INSIDE FACE 2 FEET OR MORE FROM EDGE OF SHOULDER



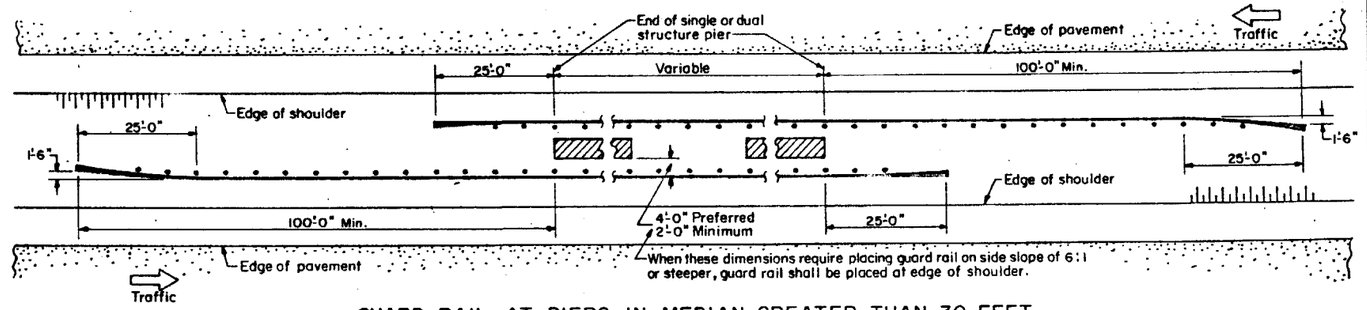
GUARD RAIL AT SHOULDER PIERS
INSIDE FACE OF PIER AT EDGE OF SHOULDER OR LESS THAN FULL WIDTH OF SHOULDER



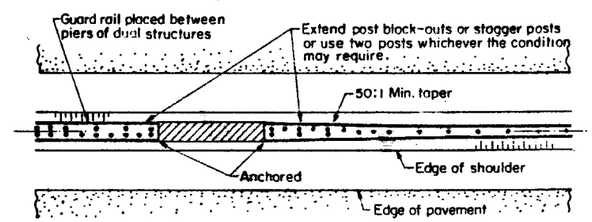
GUARD RAIL AT SIGN SUPPORT



GUARD RAIL IN MEDIAN OF 30 FEET AND LESS

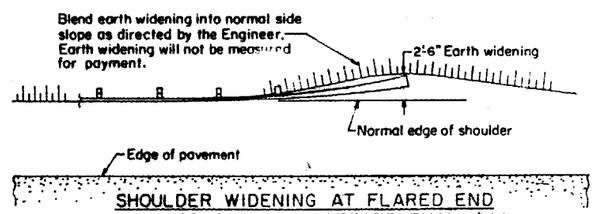


GUARD RAIL AT PIERS IN MEDIAN GREATER THAN 30 FEET

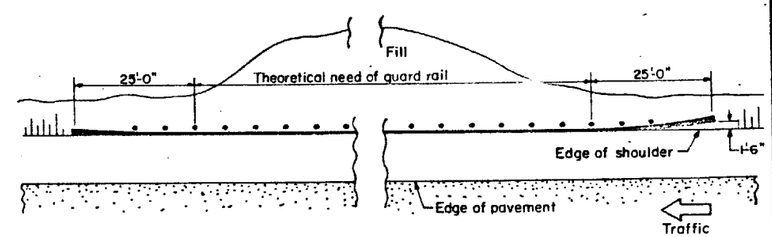


ALTERNATE MEDIAN GUARD RAIL

NOTE: Alternate to be used only when clearance will not permit guard rail on outside of pier.



SHOULDER WIDENING AT FLARED END WHEN SIDE SLOPE IS STEEPER THAN 6:1



GUARD RAIL AT FILL

GUARD RAIL TREATMENT AT STRUCTURES:

For two-lane, two-way highway a minimum of 100 feet of single beam guard rail shall be placed at both ends of the structure and on both sides of the highway.

For dual highways where roadways have independent alignment place guard rail at approach end of the structure only, in accordance with the requirements for two-lane, two-way highway. Where roadways are separated by a median see Standard 2253 for guard rail placement on left shoulder.

GUARD RAIL TREATMENT AT SHOULDER PIERS:

Single beam guard rail shall be placed as shown at shoulder piers when the face of pier is less than 30 feet from edge of pavement.

GUARD RAIL TREATMENT AT MEDIAN:

Single beam guard rail shall be placed as shown at median piers when the face of pier is less than 30 feet from edge of pavement.

Double beam guard rail shall be placed as shown in medians having a width of 30 feet or less on multi-lane Trunk, Major, Area Service, and Collector class highways.

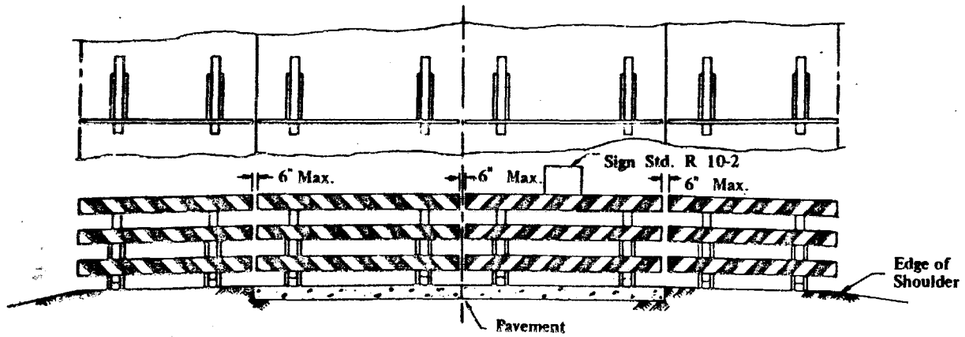
STANDARD DESIGN

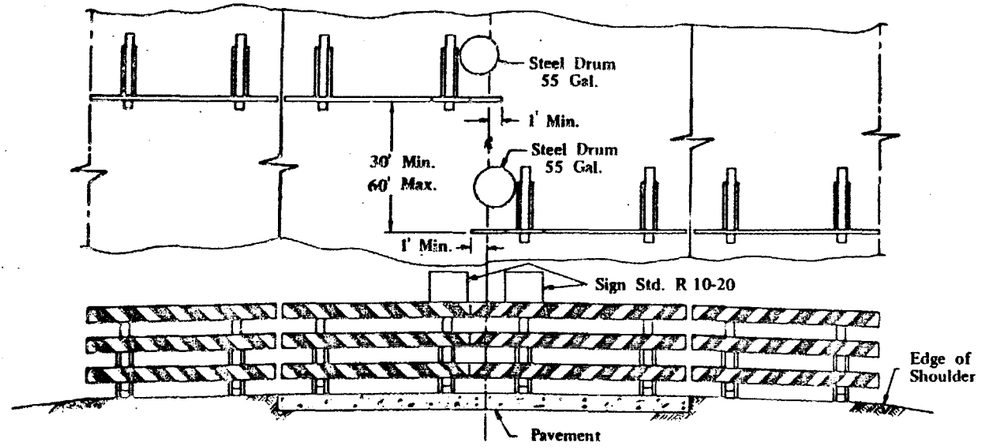
TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES FOR HIGHWAY CONSTRUCTION AND MAINTENANCE

TYPICAL APPLICATIONS OF CLASS I BARRICADES CLOSING A ROAD



ROAD CLOSED FOR LOCAL TRAFFIC

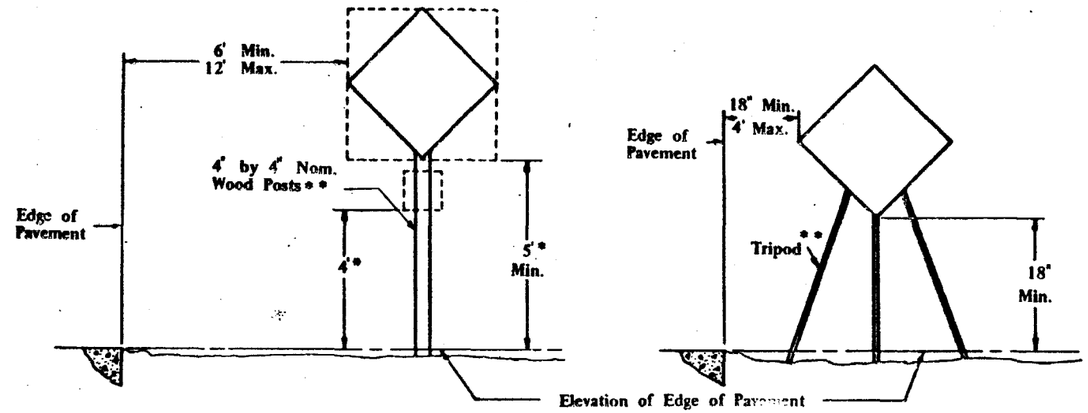
The barricades shall be to the edge of the shoulders except when otherwise directed by the Engineer or shown on the detailed construction plans.

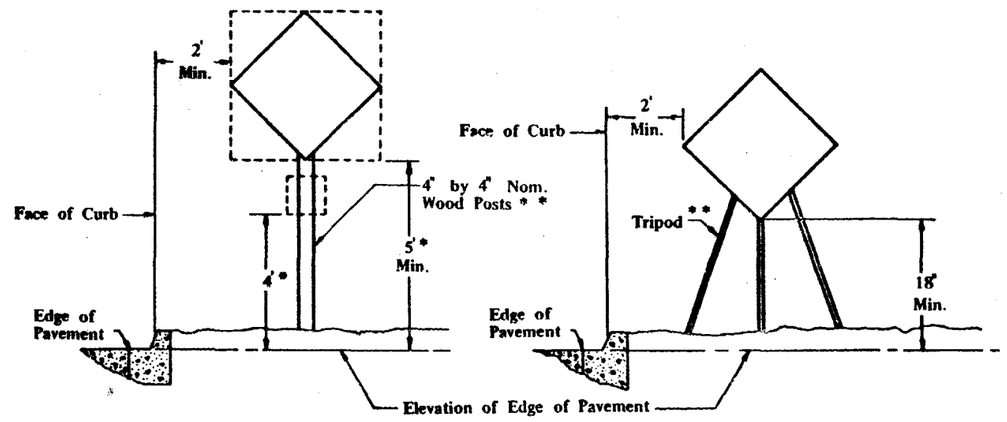


ROAD OPEN FOR LOCAL TRAFFIC

Striping shall appear on both sides of barricades. The barricades shall be to the edge of the shoulders except when otherwise directed by the Engineer or shown on the detailed construction plans.

TYPICAL SIGN INSTALLATIONS





*Add 2 ft. if parking exists within 200 ft. in advance of the sign location at any time during the project.

**Alternate designs and/or materials may be permitted when authorized by the District Engineer. All materials shall be substantial and durable.

Signs on temporary supports shall be within 20° of a vertical position.

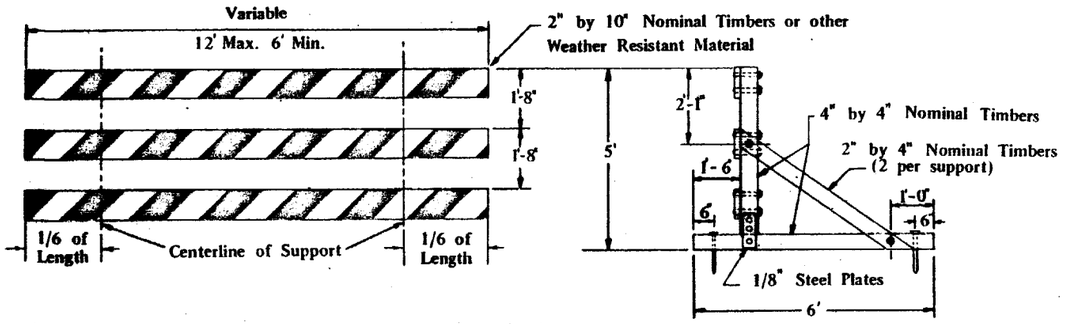
STATE OF ILLINOIS DEPARTMENT OF PUBLIC WORKS & BUILDINGS DIVISION OF HIGHWAYS	REVISED BY	DATE
APPROVED April 3, 1969	D.A.B.	12-8-69
W. A. Frick Engineer of Traffic	D.A.B.	6-19-70

STANDARD 2298-2

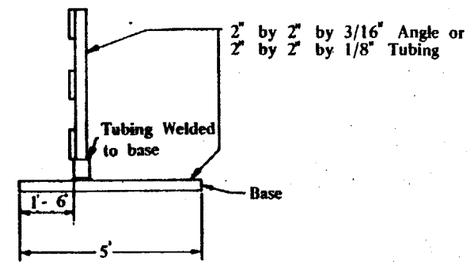
STANDARD DESIGN

DESIGN OF TRAFFIC CONTROL DEVICES FOR HIGHWAY CONSTRUCTION AND MAINTENANCE

CLASS I BARRICADES

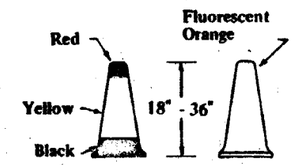


Wood Supports

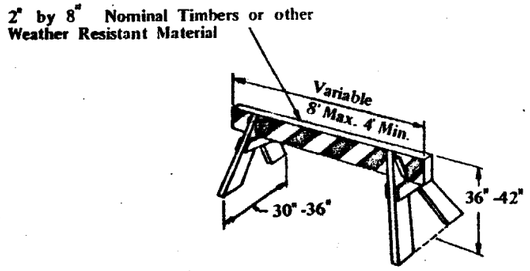


Steel Supports

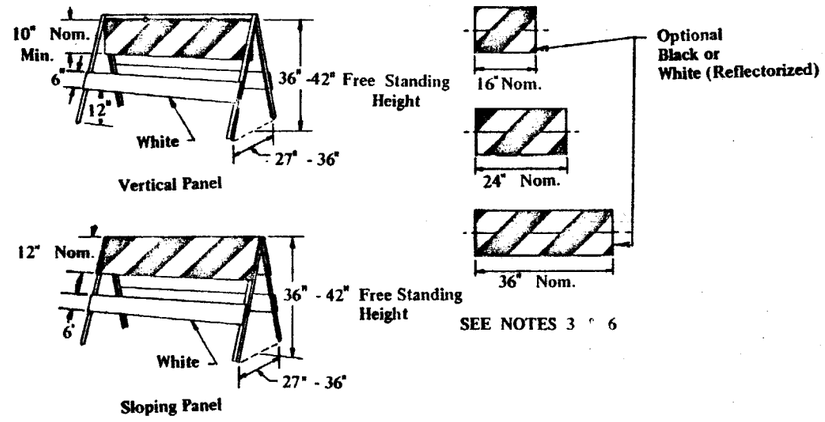
CONES



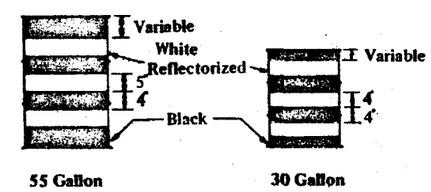
CLASS II BARRICADE



CLASS III BARRICADES



STEEL DRUMS



GENERAL NOTES

1. Barricade legs or supports shall be constructed of either timber or steel and shall be galvanized or painted white or black.
2. All reflectorized material shall have a smooth sealed surface covering the reflective elements.
3. The 36 inch wide panel is considered standard and will be used at all locations unless otherwise specified on the plans or directed by the District Engineer.
4. Swinging panels may be divided in two pieces either horizontally or vertically but the combined surface area must be not less than 10 times the required width.
5. **All barricades shall have alternating white reflectorized and black stripes at 45° from the vertical. All stripes shall be 6 in. in width.**
6. Stripe placement is shown for 12 inch panels. If a vertical panel of less than 12 inches is used the stripe placement along the horizontal center line of the panel shall be the same as shown for 12 inch panels.
7. Class II and Class III Barricades shall be striped on both sides.
8. Diagonal stripes on the Class II and Class III Barricades shall slope downward toward the side of the Barricade on which traffic will pass.
9. Barricades may be identified with a legend that does not exceed one inch in height at a location not visible to traffic.
10. Alternate designs and or materials may be permitted when authorized in writing by the District Engineer. All materials shall be substantial and durable.

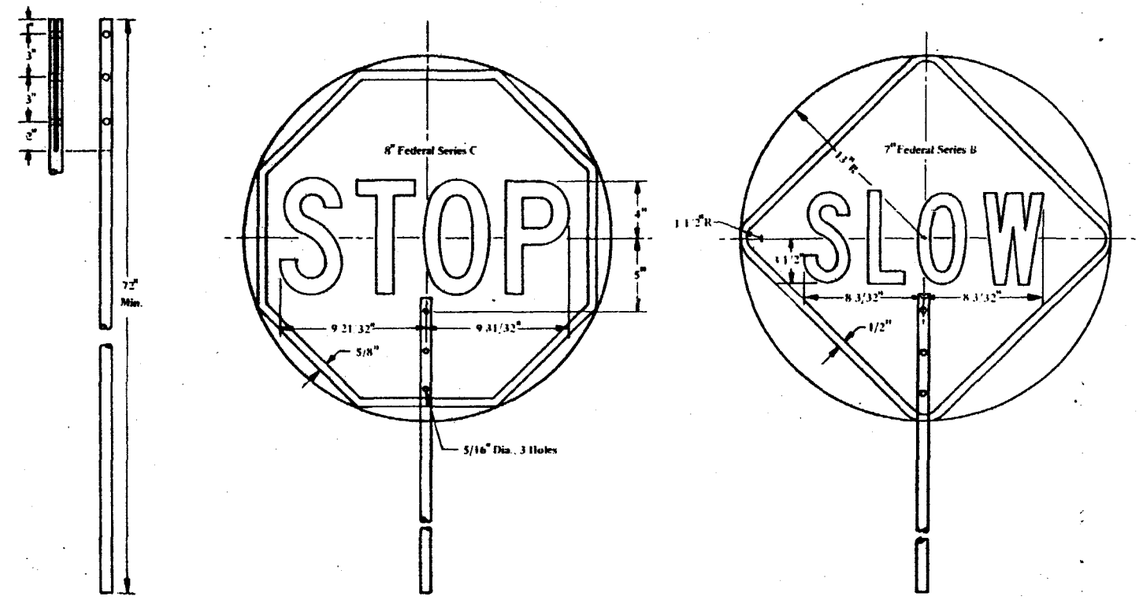
STANDARD 2299-1

STANDARD DESIGN FOR FLAGMAN TRAFFIC CONTROL SIGN



STAFF FRONT SIDE REVERSE SIDE

GENERAL NOTES

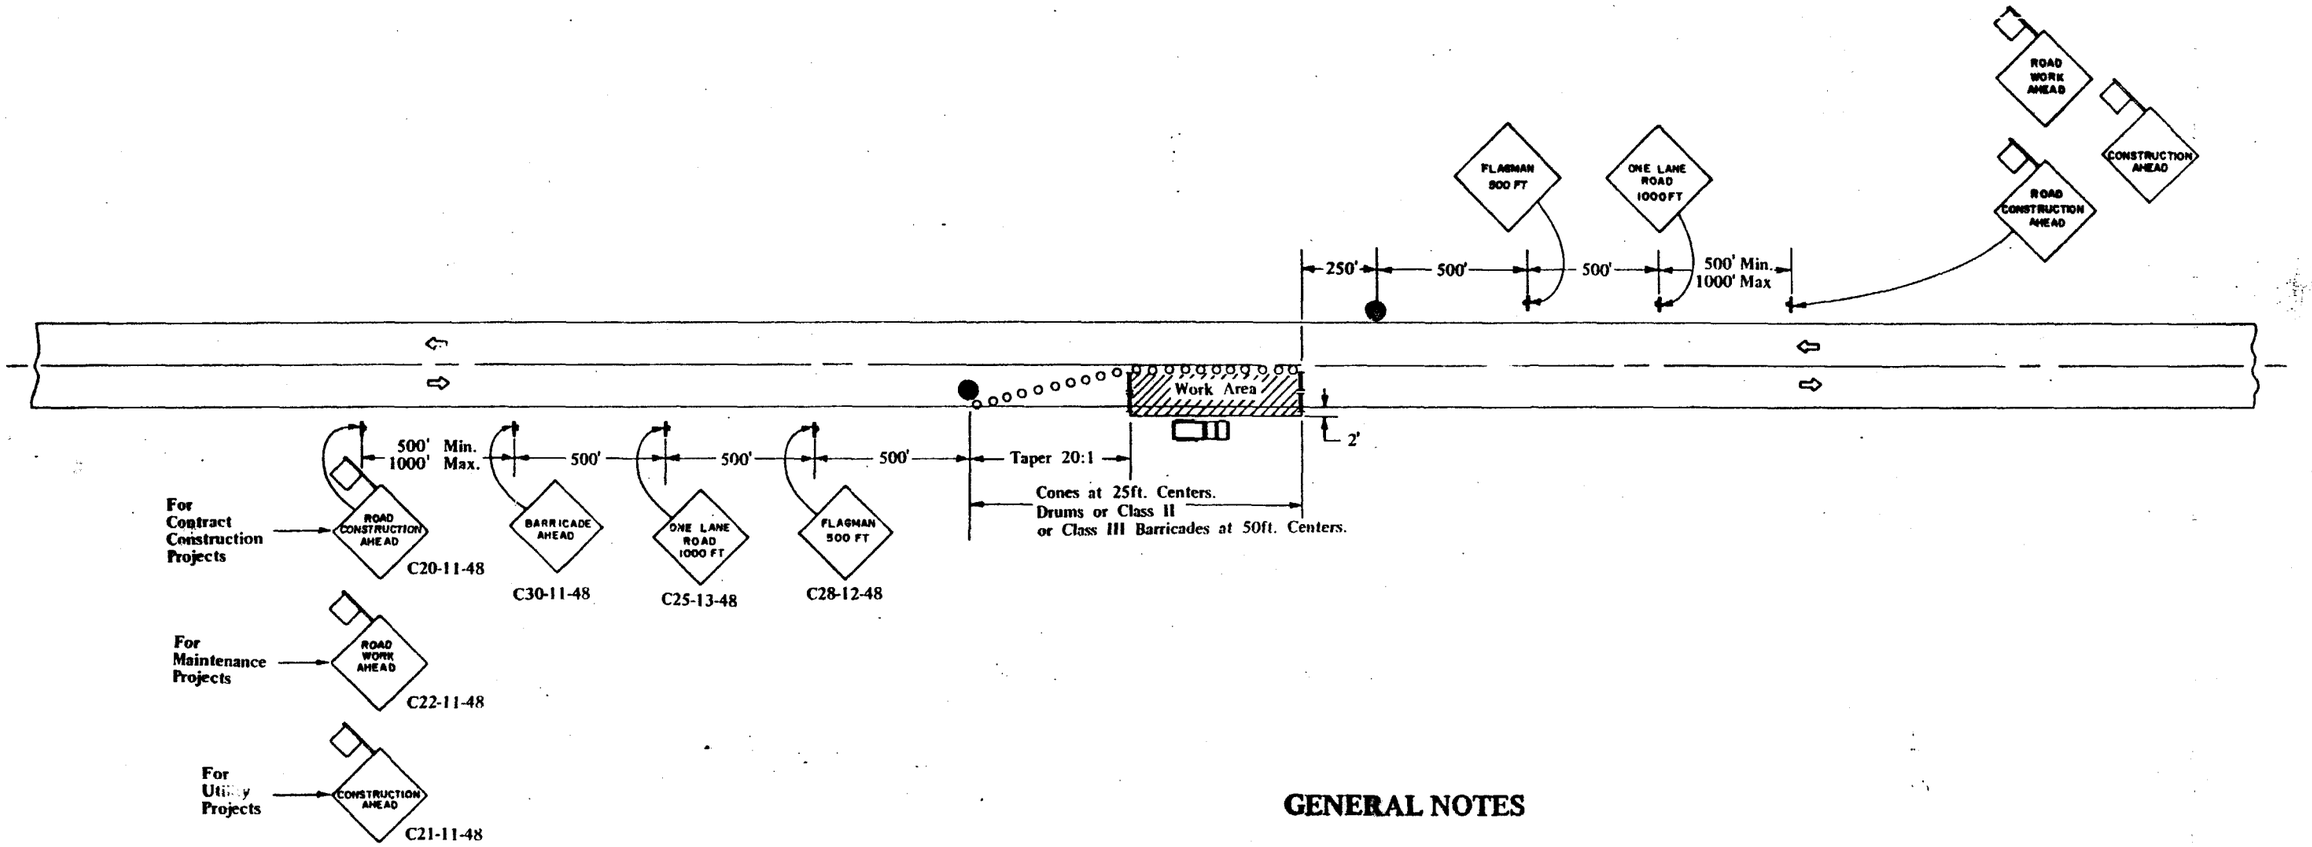
1. The "STOP" face shall consist of white letters and border on a red reflectorized background.
2. The "SLOW" face shall consist of black letters and border on a orange reflectorized background.
3. Areas outside sign borders shall be light blue.
4. The portion of the staff within the sign face shall match the sign colors.
5. All colors and letters shall meet applicable federal standards.
6. The sign shall be attached to the staff with rust resistant 1/4 in. hardware.
7. The sign base material shall be 0.08 aluminum. The staff shall consist of two sections of 3/4 in. galvanized steel conduit joined by a coupling located 60 in. from the bottom of the staff. Alternate designs and/or materials may be used when approved by the District Engineer. All materials shall be substantial and durable.
8. This sign shall be furnished by the contractor and shall be used by the flagman in lieu of flags or other signaling devices. The cost of furnishing and maintaining the sign shall be considered incidental to the contract and no additional compensation will be allowed.

STATE OF ILLINOIS DEPARTMENT OF PUBLIC WORKS & BUILDINGS DIVISION OF HIGHWAYS	REVISED	
APPROVED April 8, 1969	BY	DATE
K. A. Frick Engineer of Traffic		

STANDARD 2300

STANDARD DESIGN

TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES FOR HIGHWAY CONSTRUCTION AND CONTRACT MAINTENANCE



GENERAL NOTES

1. Construction operations shall be confined to one traffic lane, leaving the opposite lane open to traffic. At least 500 ft. of both traffic lanes shall be available for traffic movement at intervals not greater than 1,000 ft. A complete traffic control plan must be approved for any project expected to exceed 1,000 ft. in length including both taper and work areas.
2. If the work operation does not exceed 60 minutes, traffic control will be in conformance with Case VII.
3. The flagmen shall be in sight of each other or in direct communication at all times.
4. When there is no work being performed, FLAGMAN 500 FT sign(s) and the flagmen will not be required. ONE LANE ROAD 500 FT sign(s) shall be installed in place of the FLAGMAN 500 FT sign(s).
5. All signs are to be removed at completion of the day's operations.
6. When a side road intersects the highway on which work is being performed additional traffic control devices shall be erected as directed by the District Engineer.
7. Longitudinal dimensions may be adjusted slightly to fit field conditions.
8. All warning signs shall have minimum dimensions of 48 in. by 48 in. and have black legend and border on an orange reflectorized background.
9. All vehicles, equipment, men (except flagmen) and their activities are restricted at all times to one side of the pavement unless otherwise authorized by the District Engineer.
10. Forms BT 725 & BT 726 are not required.

SYMBOLS

- Work Area.
- Sign with 18 in. by 18 in. (minimum) red flag attached.
- Cone, Steel Drum (55 or 30 gallon), Class II or Class III Barricade.
- Sign on portable or permanent support.
- Flagman with Traffic Control sign.
- Class II or Class III Barricade.

TYPICAL APPLICATIONS

Pavement Patch
Utility Operations

CASE III

TWO-LANE, TWO WAY TRAFFIC, RURAL DAY OPERATIONS ONLY

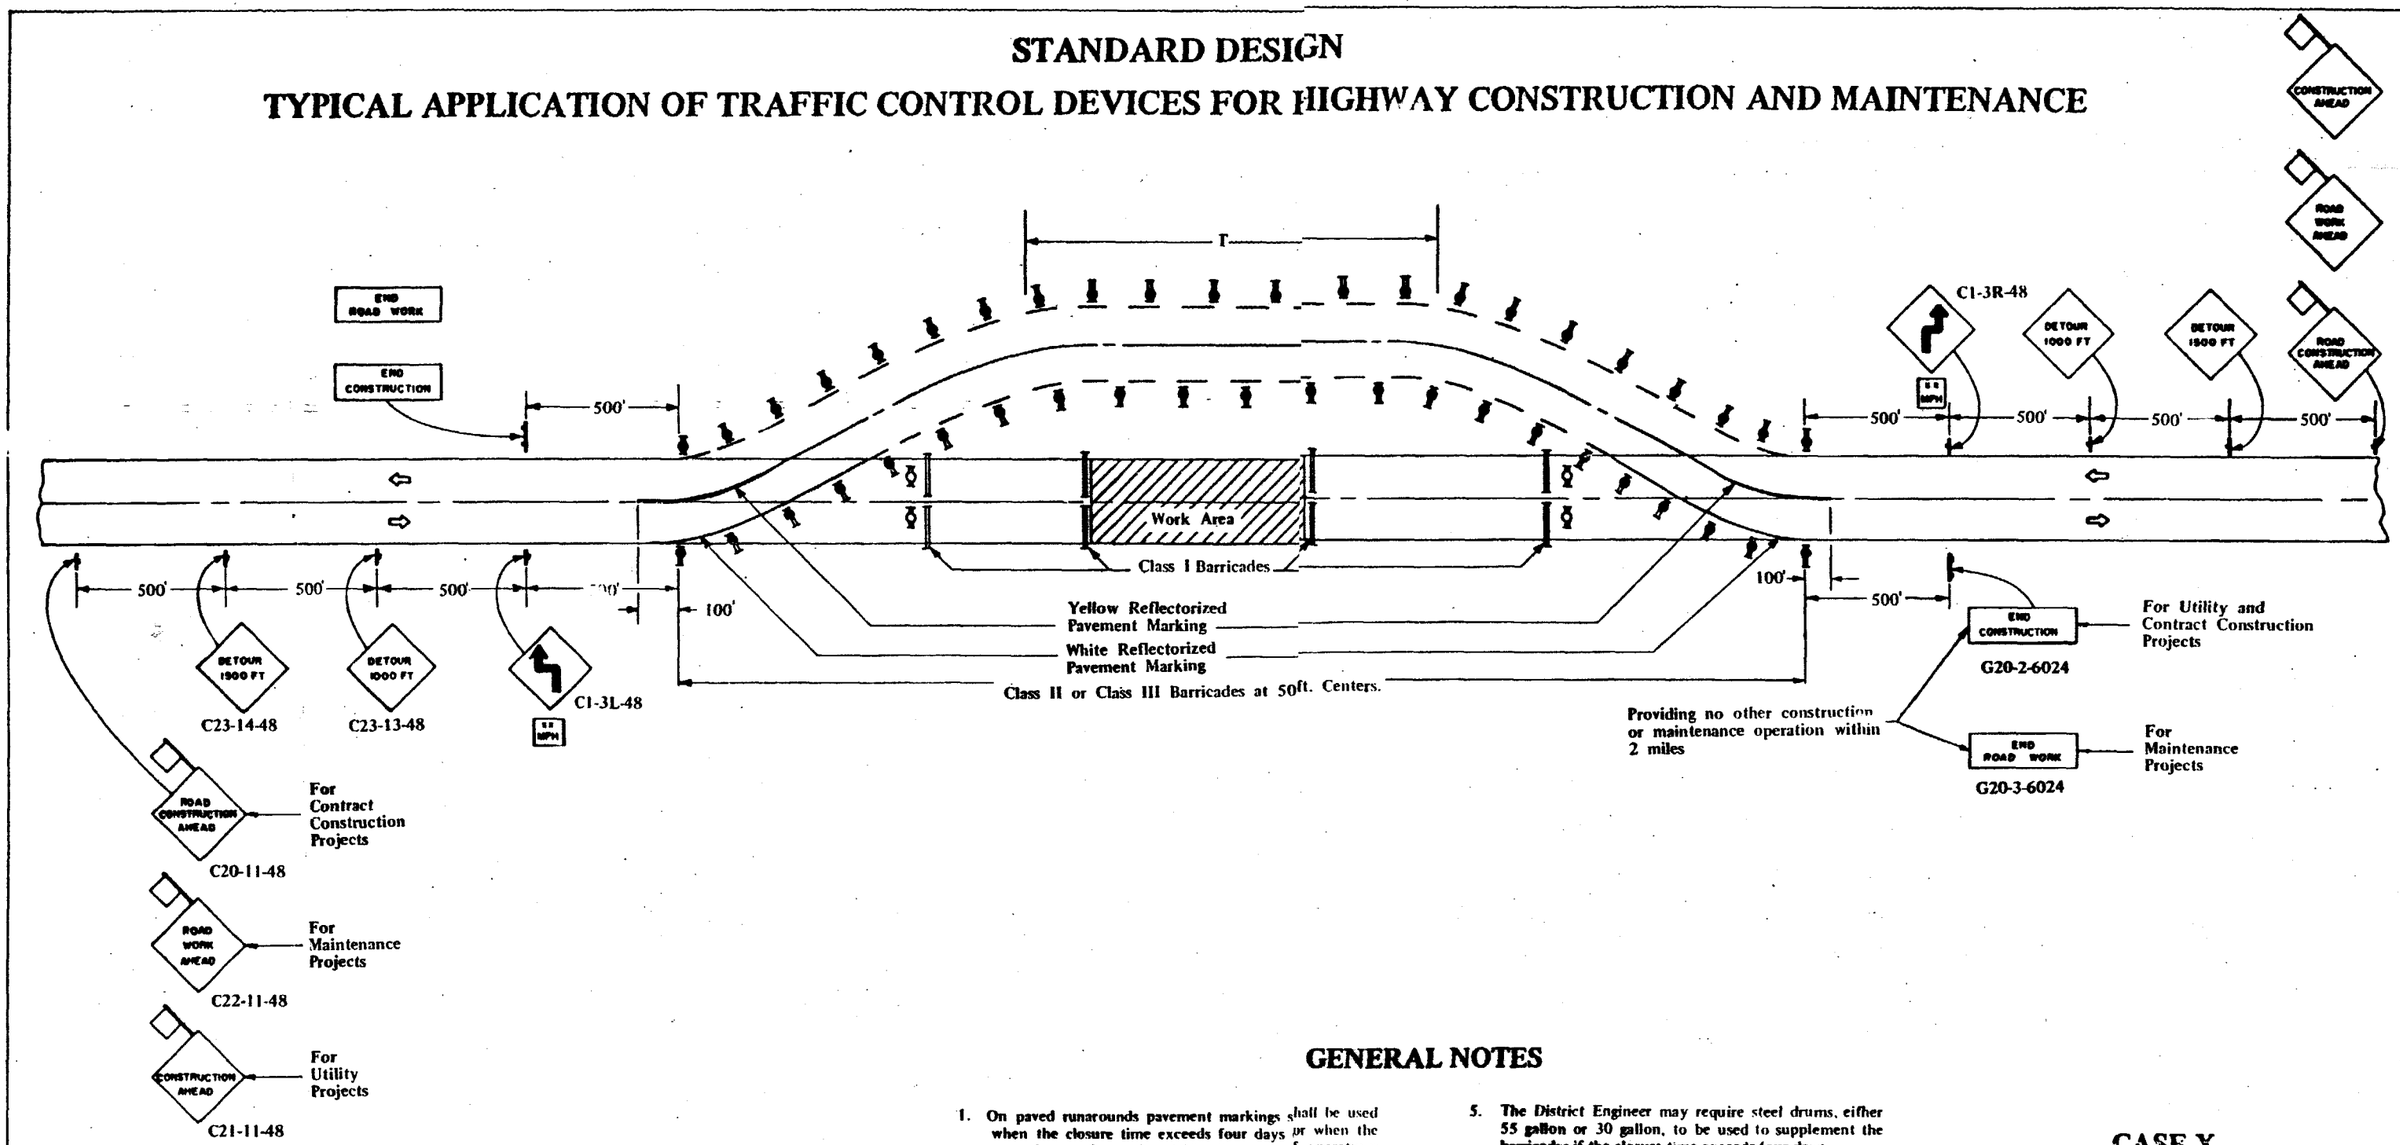
Where, at any time, any vehicle, equipment, men or their activities will encroach in the area between the center line and a line [illegible] ft. outside the edge of pavement.

STATE OF ILLINOIS DEPARTMENT OF PUBLIC WORKS & BUILDINGS DIVISION OF HIGHWAYS	REVISED BY	DATE
APPROVED April 3, 1969 W. A. Finch Engineer of Traffic	D.A.B.	12-8-69
	D.A.B.	4-22-70

STANDARD 2303-2

STANDARD DESIGN

TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES FOR HIGHWAY CONSTRUCTION AND MAINTENANCE



TYPICAL APPLICATIONS

Bridge Construction
Culvert Construction

SYMBOLS

- Class II or Class III Barricade with flashing light.
- Work Area.
- Sign with 18 in. by 18 in. (minimum) red flag attached.
- Sign on portable or permanent support.
- Class II or Class III Barricade with steady burning light.

GENERAL NOTES

1. On paved runarounds pavement markings shall be used when the closure time exceeds four days or when the normal posted speed outside the area of operations exceeds 50 m.p.h. Temporary pavement marking tape shall be used for marking a new center line and edge line on the existing pavement. All existing markings which conflict with the revised traffic pattern will be covered with black nonreflectorized pavement marking tape, or painted out. On the paved runarounds either temporary reflectorized pavement marking tape or reflectorized painted pavement marking shall be used.
2. Where the tangent distance (T) on the temporary runaround exceeds 600 ft., amber delineators at 50-foot centers may be substituted for the Class II or Class III Barricades or spacing between barricades may be increased to 100 ft. within the limits of the tangent. Within these same limits the yellow reflectorized marking used to indicate the center line of the traveled way may be replaced with white reflectorized marking in a dashed pattern, if no passing sight distance restriction exists.
3. The advisory safe speed to be shown below the reverse curve (turn) signs shall be determined at the site and approved by the District Engineer.
4. Steady burning lights used on Class II or Class III Barricades will not be required for day operations.
5. The District Engineer may require steel drums, either 55 gallon or 30 gallon, to be used to supplement the barricades if the closure time exceeds four days.
6. All signs shall be post mounted if the closure time exceeds four days.
7. A minimum of two flashing lights shall be used at night on each approach in advance of the work area. Flashing lights shall be installed above the first two signs in the series or, if less than two signs are present, may be installed on barricades. If one or both lights are installed on barricades, the minimum distance between lights shall be 500 ft.
8. Torches may be substituted for flashing lights. When used, torches must be placed on the ground.
9. When a side road intersects the highway on which work is being performed additional traffic control devices shall be erected as directed by the District Engineer.
10. Longitudinal dimensions may be adjusted slightly to fit field conditions.
11. All warning signs shall have minimum dimensions of 48 in. by 48 in. and have black legend and border on an orange reflectorized background. All signs other than warning signs shall have as a minimum the dimensions shown and shall have a black legend and border on a white reflectorized background.
12. Forms BT 725 and BT 726 are required.

CASE X

TWO-LANE, TWO WAY TRAFFIC, RURAL TEMPORARY RUNAROUND DAY OR NIGHT OPERATIONS

Where, at any time, any vehicle, equipment, men or their activities require the closure of both lanes and a temporary runaround is constructed.
