Sabrina,

I have attached the routine water quality table with the updated locations. I highlighted the new locations in blue.

The Reg 34 values are not entered into the spreadsheet yet. When I looked back over the work Andrew and I did previously, I noticed we only had the values for cadmium, copper, and zinc, and we only have the TVS values calculated for a hardness of 150 and 400. The hardness values we have calculated range between 102 and 1252, so I am thinking we might want to re-evaluate how we are using hardness in the calculations. I am also running into some issues with how we would like to display the Reg 34 values. In the spreadsheets we group together A68, A72, and M34 which are all covered by different segments, but all of the remaining data falls under segment 7.

I will give you a call tomorrow so we can discuss how we would like to calculate those values and where they should be displayed. Hopefully the data without the segment information can make the lawyers happy.

Thank you.
