Subject: 2014 Emissions in NATA - Santa Teresa

Hi Guy –

There are two ways we're handling updates to emissions since 2014. The first is with a document available on the internal review/state preview SharePoint site which details updates to emissions since 2014. The document will also go on the public website when it is available. The Santa Teresa facility is listed in that document. Here are two snippets from it:

Ex. 5 Deliberative Process (DP)

The second is in the Map App, which is not yet available. For all tracts when you click on them you get a pop up window containing the risks, drivers, and source types, with some pie charts you can scroll through. For tracts with elevated EtO, we're also adding a note at the top of the window to indicate that this represents 2014 and emission may have changed since then, with a link probably to the same document mentioned above.

Please let me know if you need more info.

Thanks,
Darcie
