Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek Case # 38236 SDG # MB5DM1, MB5DR1
Samples-, 29 Soil
Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 03/11/09

Data Validation Summary

No result was rejected. Few analyte results were flagged (J) as estimated due to the matrix spike and serial dilution analyses being outside the control limits. In addition, almost all samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for both SDG in this case. Also included are the results for Lab Duplicates (MB5DM1D, MB5DR1D), Matrix Spiked Samples (MB5DM1S, MB5DR1S) and Post Digestion Spiked Samples (MB5DM1A, MB5DR1A). Please do not use these QC samples to make environmental decisions.

If you have any questions, please call me (Hanif) at (732)906-6169.

SDG NARRATIVE

USEPA
SDG # MB5DM1
CASE # 38236
CONTRACT # EPW08065
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # A1641

A. Number of Samples and Date of Receipt

20 Soil Samples were delivered to the laboratory Intact on 02/25/09 & 02/26/09.

B. Parameters

Test requested for ICP Metals Full(by ICP-AES) & Hg.

C. Cooler Temp

Indicator Bottle: Presence/Absence
Cooler: 5°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: Samples MB5DMI and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.

Issue 2: SDG MB5DR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MB5DR1.

Issue 3: The laboratory has named the SDG with samples MB5DM1 and MB5DM5 that were received a day late SDG MB5DM1 because sample MB5DM1 is the lowest sample number; however, since this sample was received on 2/26, it is not the lowest sample number from the earliest shipment in the SDG. The first samples were received on 2/25 which would make the SDG be named MB5DM5.

E. Corrective Action taken for above:

Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.
SMO will note that the samples were received on 2/26 and that they are in SDG MB5DM1.

Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.

Resolution 3: Per Region 2, the laboratory should name the SDG MB5DM1 and note the issue in the SDG Narrative..

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ILM05.4

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (1.0 X10 or 0.50 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)

Or

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)

Etc.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092
Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Etc.

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Antimony. Duplicate sample did meet requirements. Serial Dilution did meet requirements except for Barium & Lead.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Snehal,

-Record of Communication Update-
This ROC has been updated for the addition of issue 3.

Summary Start
-Samples listed on TR/COC but not received at laboratory- Issue 1: Samples MB5DM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.
Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.
SMO will note that the samples were received on 2/26 and that they are in SDG MB5DM1.

-Insufficient/inappropriate designation of laboratory QC- Issue 2: SDG MB5DR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MB5DR1.
Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.

-Laboratory problems-
Issue 3: The laboratory has named the SDG with samples MB5DM1 and MB5DM5 that were received a day late SDG MB5DM1 because sample MB5DM1 is the lowest sample number; however, since this sample was received on 2/26, it is not the lowest sample number from the earliest shipment in the SDG. The first samples were received on 2/25 which would make the SDG be named MB5DM5.
Resolution 3: Per Region 2, the laboratory should name the SDG MBSDMl and npte the issue in the SDG Narrative..
Summary End

Please let me know if you have any questions.

Kristin,

One more clarification naming SDG#MB5DM1, since MBSDM1 and MB5DM5 were received on 02-26-09. Can lab still keep MBSDM1 Considering first lowest alpha numerical sample id Or should follow SOW and select SDG# from first actual shipment received on 02-25-09, that would make this SDG#MB5DM5.

Please let me know if we need to change SDG name and re-vise Cover Sheets.

Snehal,

Please note the resolutions below and let me know when you receive the missing samples.

-Samples listed on TR/COC but not received at laboratory- Issue 1:
Samples MB5DM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.
Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.

-Insufficient/inappropriate designation of laboratory QC- Issue 2: SDG MB5DR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MB5DR1.
Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.

Please let me know when you receive samples MB5DM1 and MB5DM3 and if the SDG or selected QC sample in issue 2 will change.
Thanks,

SDG NARRATIVE

USEPA
SDG # MBSDR1
CASE # 38236
CONTRACT # EPW08065
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # A1642

A. Number of Samples and Date of Receipt

9 Soil Samples were delivered to the laboratory intact on 02/25/09.

B. Parameters

Test requested for ICP Metals Full(by ICP-AES) & Hg.

C. Cooler Temp

Indicator Bottle: Presence/Absence
Cooler: 5°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: Samples MB5DM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.

Issue 2: SDG MB5DR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MB5DR1.

E. Corrective Action taken for above:

Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.
SMO will note that the samples were received on 2/26 and that they are in SDG MB5DM1.

Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ILM05.4

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results repotted in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (1.0 X10 or 0.50 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)

Or

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)

Etc.

Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Or

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Etc.

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Silver. Duplicate sample did meet requirements. Serial Dilution did meet requirements except for Lead.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Snehal,

Summary Start
-Samples listed on TR/COC but not received at laboratory- Issue 1: Samples MBSDM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.
Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.
SMO will note that the samples were received on 2/26 and that they are in SDG MBSDM1.

-Insufficient/inappropriate designation of laboratory QC- Issue 2: SDG MBSDR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MBSDR1.
Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.
Summary End

Please let me know if you have any questions.

Snehal,

The laboratory can use today as the LRD for the SDG that contains samples MBSDM1 and MB5DM3.

Can you please let me know what SDG these samples are in?

Can you also please let me know when you receive that samples?

Thanks,

Kristin E. Von Moll

Subject: Region 02 | Case 38236 | Lab CHEM | Issue Documentation

Snehal,

Please note the resolutions below and let me know when you receive the missing samples.

-Samples listed on TR/COC but not received at laboratory- Issue 1:
Samples MBSDM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.
Resolution 1: Per Region 2, the samples will be hand delivered to the laboratory today. The laboratory should notify the SMO coordinator when the samples are received, note the issue in the SDG Narrative, and proceed with the analysis of the samples.

-Insufficient/inappropriate designation of laboratory QC- Issue 2: SDG
MBSDR1 does not have a sample designated for laboratory QC on the TR/COC; however, per scheduling laboratory QC is required. The laboratory would like to select sample MB5E15 for laboratory QC for SDG MBSDR1.
Resolution 2: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.

Please let me know when you receive samples MBSDM1 and MB5DM3 and if the SDG or selected QC sample in issue 2 will change.
Thanks,

Kristin E. Von Moll

Kristin,

Please advise the lab that the missing two samples will be hand delivered to the lab today.

Thanks.

Subject: NEW ISSUE #7 | Case 38236 | Lab CHEM | Issue Samples listed on TR/COC but not received at laboratory

Adly,

CHEM is reporting the following issue regarding Case 38236.

Issue: Samples MBSDM1 and MB5DM3 are listed on the TR/COC; however, they were not received at the laboratory.

Please advise on how the laboratory should proceed.
Thanks,

Kristin E. Von Moll

Subject:. Case-38236-LRD-02-25-09

Kristin,

Issue 1: 29 Soil samples received with one QC sample listed on TR/COC. Lab is planning to take 'MB5E1S' as QC sample for SDG#MB5DR1

Thanks,
Snehal Mehta

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 29
SDG# MBSDM1, MBSDR1	Lab: CHEMTECH	Water: 0
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag Indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I'S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicate the lack of precision , and is applied on Form I'S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit(MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with "U".

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of twenty-nine (29) soil samples collected at the Newtown Creek site between 2/18/09 and 2/25/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Sample MB5E47 was the field duplicate of sample MB5DN3. Matrix spike, laboratory duplicate and serial dilution analyses were performed on samples MB5DN5 and MB5E15.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike, ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution, Percent Solids, and Field Blank. The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DM1

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 58). The associated Sb results, detects and non-detects, have been considered estimated and qualified "J".

"J" -> Sb -> MBSDM1, MB5DM3, MB5DM5, MB5DM7, MB5DM9, MBSDN1, MB5DN3, MB5DNS, MBSDN7, MB5DN9, MB5DP1, MB5DP3, MB5DP5, MB5DP7, MB5DP9, MB5DQ1, MB5DQ3, MB5DQ5, MB5DQ7, MB5DQ9

ICP SERIAL DILUTION

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Ba (%D = 11) and Pb (%D = 14). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Ba, Pb -> MBSDM1, MB5DM3, MB5DM5, MB5DM7, MB5DM9, MBSDN1, MBSDN3, MB5DNS, MB5DN7, MBSDN9, MBSDP1, MB5DP3, MB5DP5, MB5DP7, MB5DP9, MB5DQ1, MB5DQ3, MB5DQ5, MB5DQ7, MB5DQ9

PERCENT SOLIDS

The percent solids was less than 50 for 19 samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DM1, MB5DM3, MB5DM5, MB5DM7, MB5DM9, MB5DN1, MB5DN3, MB5DN5, MB5DN7, MB5DN9, MB5DP1, MB5DP3, MB5DP7, MB5DP9, MB5DQ1, MB5DQ3, MB5DQ5, MB5DQ7, MB5DQ9**

SDG MB5DR1

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Ag (%R = 73). The associated 5b results, detects and non-detects, have been considered estimated and qualified "J".

"J" -> Ag -> **MB5DR1, MB5DR3, MB5DR5, MB5DR7, MB5DR9, MB5E11, MB5E13, MB5E15, MB5E47**

ICP SERIAL DILUTION

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Pb (%D = 13). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Pb -> **MB5DR1, MB5DR3, MB5DR5, MB5DR7, MB5DR9, MB5E11, MB5E13, MB5E15, MB5E47**

PERCENT SOLIDS

The percent solids was less than 50 for eight samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DR1, MB5DR5, MB5DR7, MB5DR9, MB5E11, MB5E13, MB5E15, MB5E47**

A.2.3.4 Contract-Problem/Non-Compliance: None.

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek Case # 38236 SDG # MB5DS1, MB5DY1
Samples-, 41 Soil, 2 Aqueous Field Blanks Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 03/17/09

Data Validation Summary

Twenty arsenic results were rejected due to matrix spike recovery being less than zero (-29%). The rejected results must not be use to make environmental decisions. Results of few other analytess in a number of samples were flagged (J) as estimated due to the matrix spike and serial dilution analyses being outside the control limits. In addition, almost all samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for both SDG in this case. Also included are the results for Lab Duplicates (MB5DS5D, MB5DY5D), Matrix Spiked Samples (MB5DS5S, MB5DY5S) and Post Digestion Spiked Samples (MB5DS5A, MB5DY5A). Please do not use these QC samples to make environmental decisions. The field balnks have been marked as such on the XLS spreadsheet and hardcopy of Form I's.

If you have any questions, please call me (Hanif) at (732)906-6169.

SDG NARRATIVE

USEPA
SDG # MB5DS1
CASE # 38236
CONTRACT # EPW08065
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # A1665

A. Number of Samples and Date of Receipt

21 Soil Samples were delivered to the laboratory intact on 02/27/08.

B. Parameters

Test requested for Metals CLP Full & Ha.

C. Cooler Temp

Indicator Bottle: Presence/Absence
Cooler: 5°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue: the laboratory received 41 soil samples and 2 water samples and would like to know if all samples can be placed in two SDGs.

E. Corrective Action taken for above:

Resolution: Per Region 2, the laboratory can place 22 samples in one SDG and 21 samples in another. SMO will note that SDG MB5DS1 contains 21 samples and SDG MB5DY1 contains 22 samples.

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ILM05.4

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (1.0 X10 or 0.50 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)

Or

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)

Etc.

Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Etc.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092
H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Antimony & Silver. Duplicate sample did meet requirements. Serial Dilution did meet requirements except for Lead.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

2/27/2009 4:24PM Phone conversation between Adly Michael, Region 2, and Kristin Von Moll, SMO. Kristin reported the issue below and asked him to advise Adly said that it is acceptable for the lab to put 22 samples in one SDG and 21 in another.

From: Snehal Mehta [mailto:Snehal@chemtech.net]
Sent: Friday, February 27, 2009 4:14 PM
To: Von Moll, Kristin
Subject: Case-38236-LRD-2-27-09

Kristin,

Issue 1: Total of 41 Soil and 2 Water samples received today with two QC samples listed on TR/COC, lab wanted to know if One soil sample and two water can also be added to one of these two SDG to avoid extra SDG w/ another QC sample.

Thanks,
Snehal Mehta

SDG NARRATIVE

USEPA
SDG # MB5DY1
CASE # 38236
CONTRACT # EPW08065
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # A1671

A. Number of Samples and Date of Receipt

20 Soil & 2 Water Samples were delivered to the laboratory intact on 02/27/08.

B. Parameters

Test requested for Metals CLP Full & Hg.

C. Cooler Temp

Indicator Bottle: Presence/Absence
Cooler: 5°G

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue: the laboratory received 41 soil samples and 2 water samples and would like to know if all samples can be placed in two SDGs.

E. Corrective Action taken for above:

Resolution: Per Region 2, the laboratory can place 22 samples in one SDG and 21 samples in another. SMO will note that SDG MB5DS1 contains 21 samples and SDG MB5DY1 contains 22 samples.

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ILM05.4

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (L0 X10 or 0.50 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)
Or
Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)
Etc.

Calculation example for ICP-AES Water Sample:

Results reported in Ug/L = Results in ppm X 1000 X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP Water- Prep

Fraction of Sample Amount Taken in ICP Water- Prep = 100/100 or 50/50 =1
(if 100 ml Initial Volume taken and Final Volume was made to 100 ml or 50 ml Initial Volume and Final Volume made to 50 ml in ICP-AES Water Digestion procedure)

Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)
Or
Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)
Etc.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

Calculation example for Hg Water Sample:

Results reported in Ug/L = Results in ppb X Dilution Factor (if any) X Fraction of Sample Amount Taken in Water Hg-Prep.

Fraction of Sample Amount Taken in Water Hg-Prep = 100/100 =1
(if 100 ml Initial Volume taken and made it to Final Volume as 100 ml)

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Arsenic, Selenium & Silver Duplicate sample did meet requirements except for the Arsenic, Copper, Lead & Nickel. Serial Dilution did meet requirements.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

2/27/2009 4:24PM Phone conversation between Adly Michael, Region 2, and Kristin Von Moll, SMO. Kristin reported the issue below and asked him to advise. Adly said that it is acceptable for the lab to put 22 samples in one SDG and 21 in another.

From: Snehal Mehta [mailto:Snehal@chemtech.net]
Sent: Friday, February 27, 2009 4:14 PM
To: Von Moll, Kristin
Subject: Case-38236-LRD-2-27-09

Kristin,

Issue 1: Total of 41 Soil and 2 Water samples received today with two QC samples listed on TR/COC, lab wanted to know if One soil sample and two water can also be added to ohe of these two SDG to avoid extra SDG w/ another QC sample.

Thanks,
Snehal Mehta

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 41
SDG# MB5DS1, MB5DY1	Lab: CHEMTECH	Water: 2
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I'S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I'S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with "U".

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Caae Description:

This case consists of two (2) aqueous and forty-one (41) soil samples collected at the Newtown Creek site between 2/26/09 and 2/27/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Samples MB5E49 and MB5E51 were the field duplicates for MB5DX7 and MB5E01, respectively. Matrix spike, laboratory duplicate and serial dilution analyses were performed on samples MB5DY5 and MB5DS5. The two aqueous samples in this case were identified as field blanks. Consequently, no matrix spike, laboratory duplicate or ICP serial dilution analyses were performed for the aqueous matrix.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DS1 (SOIL)

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 74) and Ag (%R = 74). All associated results have been considered estimated and qualified "J".

"J" -> Sb, Ag -> MB5DS1, MB5DS3, MB5DS5, MB5DS7, MB5DS9, MBSDT1, MB5DT3, MB5DT5, MB5DT7, MB5DT9, MB5DW1, MB5DW3, MB5DW5, MB5DW7, MB5DW9, MB5DX1, MB5DX3, MB5DX5, MB5DX7, MB5DX9, MB5E87

ICP SERIAL DILUTION

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Pb (%D = 11). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Pb -> MB5DS1, MB5DS3, MB5DS5, MB5DS7, MB5DS9, MB5DT1, MB5DT3, MB5DT5, MB5DT7, MB5DT9, MB5DW1, MB5DW3, MB5DW5, MB5DW7, MB5DW9, MB5DX1, MB5DX3, MB5DX5, MB5DX7, MB5DX9, MB5E87

PERCENT SOLIDS

The percent solids was less than 50 for all samples in this SDG. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> MB5D51, MB5D53, MB5D55, MB5D57, MB5D59, MB5DT1, MB5DT3, MB5DT5, MB5DT7, MB5DT9, MB5DW1, MB5DW3, MB5DW5, MB5DW7, MB5DW9, MB5DX1, MB5DX3, MB5DX5, MB5DX7, MB5DX9, MB5E87

SDG MB5DY1 (SOIL & WATER)

MATRIX SPIKE (SOIL)

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for As (%R = -29) Se (%R = 67) and Ag (%R = 70). The associated As results have been rejected. The associated Sb and Ag results have been considered estimated and qualified "J".

"R" -> As -> MB5DY1, MB5DY3, MB5DY5, MB5DY7, MB5DY9, MB5DZ1, MB5DZ3, MB5DZ5, MB5DZ7, MB5DZ9, MB5E01, MB5E03, MB5E05, MB5E49, MB5E51, MB5E77, MB5E79, MB5E81, MB5E83, MB5E85

"J" -> Se, Ag -> MB5DY1, MB5DY3, MB5DY5, MB5DY7, MB5DY9, MB5DZ1, MB5DZ3, MB5DZ5, MB5DZ7, MB5DZ9, MB5E01, MB5E03, MB5E05, MB5E49, MB5E51, MB5E77, MB5E79, MB5E81, MB5E83, MB5E85

LABORATORY DUPLICATE (SOIL)

The RPD between sample and duplicate results was $\geq$ 35% but less than 120% for As and Cu when both sample and duplicate results were greater than 5 X CRQL. All associated sample results greater or equal to CRQL have been considered estimated and flagged "J".

"J" -> As*, Cu -> MB5DY1, MB5DY3, MB5DY5, MB5DY7, MB5DY9, MB5DZ1, MB5DZ3, MB5DZ5, MB5DZ7, MB5DZ9, MB5E01, MB5E03, MB5E05, MB5E49, MB5E51, MB5E77, MB5E79, MB5E81, MB5E83, MB5E85

FIELD DUPLICATE (SOIL)

The absolute difference between sample (MB5E01) and duplicate (MB5E51) results was greater than 2X CRQL for Hg when sample and/or duplicate results were less than 5 X CRQL. All associated sample results $\geq$ MDL but $\leq$5XCRQL have been considered estimated and flagged "J".

"J" -> Mg -> MB5E51

PERCENT SOLIDS

The percent solids was less than 50 for all soil samples in this SDG, except sample **MB5DY7**. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DY1, MB5DY3, MB5DY5, MB5DY9, MB5DZ1, MB5DZ3, MB5DZ5, MB5DZ7, MB5DZ9, MB5E01, MB5E03, MB5E05, MB5E49, MB5E51, MB5E77, MB5E79, MB5E81, MB5E83, MB5E85**

* already qualified

A.2.3.4 Contract-Problem/Non-Compliance: None.

Subject: Organic data Validation Completion -- Newtown Creek Site -- Case # 38236

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DJ5 (6 soil samples for VOA, BNA & PCBs) are attached in the Excel format, PDF of all Form 1s, as well as the data assessment narrative. The hard copy (Form Is) will be sent to the RPM/OSC for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (W-SAT).

Contact me (Hanif) if you have any questions or require information.

(See attached file: 38236----B5DJ5.xls)(See attached file:

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG Nos.: B5DJ5
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: February/ 27 /2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DJ5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

VDSS3-The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

-B5DJ5, B5DJ6, B5DJ7, B5DJ9, B5DK0

- Benzene-d6 B5DK0

-Benzene

- 1,4-Dioxane-d8 B5DJ5, B5DJ6, B5DJ7, B5DJ9

-1,4-Dioxane

- 1,2-Dichloropropane-d6 B5DK0

-1,2-Dichloropropane, Bromodichloromethane, Cyclohexane, Methylcyclohexane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. if the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

VLB11-The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified **U**. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0

- **Methylene chloride** B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0

B) **Field or rinse blank contamination:**
Not applicable.

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**

VLB47-The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the CRQL. Detected compounds are qualified **U**. Non detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **Toluene** B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0

- **Trichlorofluoromethane** B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0

E) Tics "R" rejected:
None.

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane, 1,4-Dioxane-d8

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, VBLKS1, VHBLKS1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

VC8-The following volatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, VBLKS1, VHBLKS1

- 1,2-Dichloroethane VSTD050S1

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, VBLKS1, VHBLKS1

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from knowh standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane, 1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12.T This package contains re-extractions, re-analyses br dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DJ5
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: February / 27 / 2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

SDG# B5DJ5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operatipns. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:

Not applicable.

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
Not applicable.

E) **Tics "R" rejected:**
Concentration of TIC is less than 5X the associated Storage Blank Contamination in the following samples:
B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DK0

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All noh-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) **Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of

the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and noh-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

BC10-The following semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, SBLK81

- Pyrene SSTD020NL

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, SBLK81

- Dibenzofuran SSTD020NL

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, SBLK81

- Isophorone SSTD020NL

-B5DJ5, B5DJ6, B5DJ7, B5DJ8, B5DJ9, B5DK0, SBLK81

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard

compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. **CONTRACT PROBLEMS NON-COMPLIANCE:** No problems.

10. **FIELD DOCUMENTATION:** No problems.

11. **OTHER PROBLEMS:** None.

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DJ5
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF Specifications, the National Function Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: Februarv/26/2009

Peer Reviewer's Signature: _____ Date: ____/___/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DJ5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/ CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/ CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

No problems found for this qualification as per NFG/ CCS report.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

Not applicable.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/ CCS report.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

Aroclor-1254 B5DJ5
Aroclor-1242 B5DJ5, B5DJ7, B5DK0

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Using professional judgment detected compounds are qualified J.

Aroclor-1260 B5DJ5MSD, B5DJ5MS

The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Aroclor-1242 B5DJ9

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:** None.

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No..: B5DK1
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: March / 03 /2009

Peer Reviewer's Signature: C-Stanne Date: 3 / 5 / 2009

Verified By: Date: 03 / 09 / 2009

SDG# B5DK1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/GGS report.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

VDSS3-The following volatile samples have DMC/SMG recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

- 1,4-Dioxane-d8 B5DK3, B5DK7, B5DK8, B5DK9, B5DL1

-1,4-Dioxane

VDSS4-The following volatile samples have one or more DMC/SMC recovery values is less than the primary lower limit but greater than or equal to the expanded lower limit bf the criteria window. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DL4, VHBLKM1

- 1,2-Dichloroethane-d4 B5DL4

-1,1,1-Trichloroethane, 1,1,2-Trichloro-1,2,2-trifluoroethane, 1,2-Dibromoethane, 1,2-Dichloroethane, Carbon tetrachloride, Methyl acetate, Methyl tert-butyl ether, Methylene chloride, Trichlorofluoromethane

- 1,4-Dioxane-d8 VHBLKM1

-1,4-Dioxane

- Chloroform-d B5DL4

-1,1-Dichloroethane, Bromochloromethane, Bromoform, Chloroform, Dibromochloromethane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for

additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No additional qualification due to Method blank contamination.

B) Field or rinse blank contamination:
No additional qualification due to Field blank contamination.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
VLB46-The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated storage blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-B5DK1, B5DK2, B5DK3, B5DK5, B5DK7, B5DK8, B5DK9, B5DL0, B5DL1, B5DL2, B5DL4, B5E45, B5E46

- Acetone B5DK1, B5DK3, B5DK5, B5DK9, B5DL1, B5E45

- Methylene chloride B5DK2, B5DK7, B5DK8, B5DK9, B5DL0, B5DL2, B5DL4, B5E45, B5E46

E) Tics "R" rejected:
None.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument Is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable perfonnance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The respdnse factor measures the instrument's response to specific chemical compounds. The response factor for the Target Conipound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers Indicates a serious detection and quantitation problem (poor sensitivity). Analytes aetected in the sample will be qualified as estimated, "J". All hon-detects for that compound will be rejected "R".

The following volatile samples are associated with ah initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane, 1,4-Dioxane-d8

-B5DK1, B5DK2, B5DK3, B5DK4, B5DK5, B5DK6, B5DK6RE, B5DK7, B5DK8, B5DK9, B5DL0, B5DL1, B5DL2, B5DL3, B5DL4, B5E45, B5E46, B5E90, VBLKM1, VBLKS1, VBLKS2, VBLKS3, VBLKW1, VHBLKM1, VHBLKS1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calioration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily perfonnance. Percent RSD niust be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dipxahe. %D rhust be < 25%, < 40% for the poor perfonners, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

VC8-The following volatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DL2, B5DL4, VBLKM1, VHBLKM1

- 1,2,3-Trichlorbbenzene VSTD050M1

-B5DL2, B5DL4, VBLKM1, VHBLKM1

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor

of 2 (-50% to +200%) from the associated continuing calibratiori standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there Is a severe loss of sensitivity.

if an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

VIS31-The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified J. Nondetected compounds are qualified R.

- 1,4-Dichlorobenzene-d4 B5DK6, B5DK6RE

-Bromoform,1,2,3-Trichlorobenzene,1,2-Dichlorobenzene,1,2-Dibromo-3-chloropropane,1,2,4-Trichlorobenzene,1,4-Dichlorobenzene,1,3-Dichlorobenzene

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have Ion spectra which has a ratio of the primary and secondary m/e intensities wKhin 20% of that In the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there Is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane, 1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria iri all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DK6RE

Functibnal Guldelines for Evaluating Orgahic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DK1
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according tb TDF specifications, the National Functional Guldelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some ahalytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed oh the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin **Date:** March / 04 / 2009

Verified By: R Amano **Date:** 03 / 09 /2009

SDG# B5DK1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and ahalytes shown due tp excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performahce and efficiency of the analytioal technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method olank contamination:
No problems found for this qualification.

B) **Field or rinse blank cohtamiriatibri:**

The following semi volatile samples have common contaminant analyte concentrations reported less than the CRQL. The associated Field blank common contaminant concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- Phenol, Diethylphthalate

B5DK1, B5DK2, B5DK3, B5DK4, B5DK5, B5DK6, B5DK7, B5DK8, B5DK9, B5DL0, B5DL1, BSDL2, B5DL3, B5DL4, B5E45, B5E46

- Benzaldehyde

B5DK1, B5DK2, B5DK3, B5DK4, B5DK5, B5DK6, B5DK7, B5DK5, B5DK9, B5DL0, B5DL1, B5DL3, B5DL4, B5E45, B5E46

- Bis(2-ethylhexyl) phthalate

B5DK1, B5DK3, B5DK5, B5DK7, B5DK9, B5DL1, B5DL3, B5E45, B5E46

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
Not applicable.

E) **Tics "R" rejected:**
Concentration of TIC is less than 5X the associated Storage Blank Contamination in the following samples: B5DL4
TIC at RT 22.61 in the following sample: B5DK2
Siloxane in the following sample: B5DL0
1,1-Biphenyl in the following sample: B5DL2

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 2 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSO) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE: No problems.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DK1
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has oeen reviewed according to TDF Specifications, the Nafional Function Guidelines Repbrt # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin — Date: March / 4 / 2009

Peer Reviewer's Signature: C. Stamia — Date: 3 / 5 / 2009

Verified By: R Aman — Date: 03 / 05 / 2009

SDG# B5DK1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/ CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to saniple preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found fbr this qualification as per NFG/ CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification bf data.

AMS1-The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds are qualified J. Nondetected compounds are not qualified.

- Aroclor-1016 B5E46, B5E46MS, B5E46MSD

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the twb surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/ CCS report.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

QUALIFIED U:
ADL332-The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U.

Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-B5DK4, B5E46

- Aroclor-1254 B5DK4
- Aroclor-1242 B5E46

QUALIFIED J:

ADL312-The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

- Aroclor-1254 B5DL2

QUALIFIED JN:

ADL322-The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified NJ.

- Aroclor-1242 B5DL4

8. CONTRACT PROBLEMS NON-COMPLIANCE: None.

9. FIELD DOCUMENTATION: Nq problems.

10. OTHER PROBLEMS: None.

11. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no modifications except as listed below.

Instrumentation: Hewlett Packard 5972-S GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) with Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Hewlett Packard 5971-L GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm fihn). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) with Tekmar ALS 2016 Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Hewlett Packard 5971-M GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µun fihn). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) and Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 10°C (2.0 min.) 8°/ntin. to 180° (0.1 min.) 30°/mm. to 220°.

Sample Preparation: This method has no extraction procedure for the low level soil or water matrices. Soil samples were received in sample cartridges and were extruded and frozen until analysis. Prior to analysis a total of 10 ıhL of reagent water containing intemal standard/ DMC solution was added and the sample was purged. Medium level soil samples were extracted in methanol and a 100 µL aliquot was

DataChem Laboratories, Inc.
Part of the ALS Laboratory Group
960 West LaVoy Drive, Salt Lake City, Utah 84123

A Campbell Brothers Limited Company

added to 5.0 mL of reagent water containing internal standard/ DMC mix. A 5.0 mL aliquot of water sample was spiked with internal standard/ DMC solution and purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-bromofluorobenzene as specified in the SOW. This tune is valid for 12 hours.

Initial Calibration and Calibration Verification: The five point initial calibration curve met the specified criteria in the SOW with the exception of the dioxane compounds. All calibration verification standards met method specified criteria (again excepting dioxanes). Due to interfering ions, the secondary 55 ion was used in quantifying methylcyclohexane for some analyses. Any manual integration is noted by an "m" footnote on the quantitation report and a graphics page was included to show peak integration. Analytes which required a manual integration are summarized:

Sample	Initial Scan	Final Scan	Analyte

Blank Analysis: Method blanks were prepared using Ottawa Sand and or reagent water spiked with internal standard/DMC solution. All blanks were free of volatile organic contaminants within the specifications of the method.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria unless otherwise noted on forms II and VIII. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: MS/MSD analyses were not required for this SDG.

Sample Calculations: All symbols are defined in section 8.3 of DCL SOP OV-EP-SOM and section 11.2 of SOM01.2. $RRF = (A_x C_{is})/(A_{is} C_x)$; Water Concentration $= (A_x I_s DF)/(V_o A_{is} \underline{RRF})$; Soil Conc.$= (A_x I_s DF)/(DW_s A_{is} \underline{RRF})$; Medium Level Conc. $= (A_x I_s A V_t DF)/(A_{is} \underline{RRF} V_a W_s D)$.

Miscellaneous Comments: As per the SOW, alkanes were not reported separately but rather were reported as "total alkanes." With regard to the naming of tentatively identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has reason to assign a different name. Reasons include but are not limited to previous experience with the compound or an instance where the retention time clearly indicates that a computer generated match is in fact not the compound in question. A specific compound name may be assigned to more than one peak. In any case, TIC naming is tentative and it cannot be assumed that reported compounds and specific isomers are correct.

I certify that this sample data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy sample data package and in the electronic data deliverable has been authorized by the laboratory manager or the manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-05-026
Case: 38236
SDG: B5DK1
Laboratory Name: DataChem Laboratories
DCL Set ID.: 9049019
Sample No.: B5DK1, B5DK2, B5DK3, B5DK4, B5DK5, B5DK6, B5DK7, B5DK8, B5DK9, B5DL0, B5DL1, B5DL2, B5DL3, B5DL4, B5E45, B5E46, B5E90.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOMD1.2. There are no deviations from the SOW. All samples listed above are billable.

Instmmentation: Agilent GC/MS system (ID 5972-N)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 pm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tunes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blanks met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Anaiysis: None.

Dilutions: None.

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety pf miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the 276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to

each other without baseline resolution between the twb peaks. The automated peak finding routine quite often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chloroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often truncated, leaying the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alklyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experience with respect to a specific compound. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. This was the case for 1-Methylnaphthalene in Sample B5DL2. In the case of the TICs at retention time 22.43 in Sample B5DK5 and retention time 11.87 in Sample B5DL4, the analyst determined that the first spectral match called by the data system was inaccurate, despite having a fit value above 85%, and hence selected another naming option with a superior fit. There may be instances in which a specific compound name is assigned to more than one peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_o)\,(V_i)}$$

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\,(I_s)\,(V_t)\,(PF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_i)\,(W_s)\,(D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

SDG Narrative
Aroclors

Laboratory Name: ALS DataChem
Case: 38236
SDG: B5DK1
EPA Sample Numbers: B5DK1, B5DK2, B5DK3, B5DK4, B5DK5, B5DK6, B5DK7, B5DK8, B5DK9, B5DL0, B5DLI, B5DL2, B5DL3, B5DL4, B5E45, B5E46, B5E46MS, B5E46MSD, and B5E90.
Contract Number: BP-W-05-026

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. All samples listed aboye are billable.

Instrumentation: Hewlett Packard 5890 GC/ECD
Column: Restek 0.32m ID X 30M RTX-CLP 0.50 micron film (primary).
Restek 0.32m ID X 30M RTX-CLP2 0.25 micron film (confirmation).

Sample Preparation: All samples were extracted within hold times.

Initial Calibration: All requirements for initial calibration were met.

Continuing Calibration: All continuing calibration requirements were met.

Sample Analysis: The samples were all analyzed within SOW specified hold times.

Dilutions: None.

Blank Analysis: No analytes were detected in the method blank above the CRQL.

LCS Analysis: All recoveries were within established limits.

MS/MSD Analysis: The RPD for AR1016 was high on column-A. All other MS and MSD results were within the established limits.

Surrogates: All samples met surrogate recovery criteria.

Miscellaneous Comments: Samples AR12423C2 and AR12423D2 (column-B) required manual integrations in order to correct the baseline around AR1242 peak-3. Sample ALCSS1 required a manual integration in order to correctly call AR1016 peak-1 on column-A. Note: all soil samples were less than 50% solids.

Equation for Aroclors in water samples (EQ. 7):

EQ. 7 Concentration Calculation for Water Samples

$$\text{Concentration } \mu g/L = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_o)\ (V_i)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_o = Volume of water extracted in mL (Note: for instrument and sulfur blanks assume a volume of 1000 mL).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

DF = Dilution Factor. The DF for analysis of water samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{pL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

$GPC = \frac{V_{in}}{V_{out}}$ = GPC factor. (If no GPC is performed, GPC = 1.0).

V_{in} = Volume of extract loaded onto GPC column.

V_{out} = Volume of extracted collected after GPC cleanup.

Equation for Aroclors in soil samples (EQ. 9):

EQ. 9 Concentration Calculation for Soil Samples

$$\text{Concentration pg/Kg (Dry weight basis)} = \frac{(A_x)\,(V_t)\,(DF)\,(GPC)}{(\overline{CF})\,(V_i)\,(W_s)\,(D)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column.)

$$D = \frac{100 - \%Moisture}{100}$$

W_s = Weight of sample extracted in g.

DF = Dilution Factor. The DF for analysis of soil/sediment samples by this method is defined as follows:

$$\frac{\text{uL most concentrated extract used to make dilution + uL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

Subject
NEW ISSUE #5 | Case 38236 | Lab DATAC | Issue Non-standard matrix

Hi Adly,

DATAC is reporting the following issue regarding Case 38236.

Issue: All samples in SDG BSDK1 are below 50% solids and all samples in SDG B5DL5 are below 50% solids with the exception of sample B5DM0.

Please advise on how the laboratory should proceed.
Thanks,

Kristin E. Von Moll

Cc: Adly Michael; Jennifer Ferranda
Subject: Region 02 | Case 38236 | Lab DATAC | SDG B5DK1 | Issue Insufficient/inappropriate designation of laboratory QC | FINAL

Roxy,

Summary Start
Issue: Per scheduling laboratory QC is required for the ARO fraction; however, there is no sample designated on the TR/COC. The laboratory would like to select sample B5E46 for laboratory QC for SDG B5DK1.
Resolution: In accordance with previous direction from Region 2, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples.
Summary End

Please note that I spoke with the sampler and they are not shipping anything out tomorrow and they are not sure yet about Friday. They should be letting me know and I will pass on any information i receive.

Please let me know if you have any questions.
Thanks,

Kristin E. Von Moll

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236 **SOG No.: B56K0**
LABORATORY: DataChem **SITE: Newtown Creek**
SAMPLER: W-SAT **ANALYSIS: VOA**

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu **Date:** March/4/2009

Peer Reviewer's Signature: C. Stanne **Date:** 3 / 5 /2009

Verified By: R. Amore **Date:** 03 / 05 /2009

SDG# B5DL4

1. HOLDING TIME:

The amount of ah analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

1,4-Dioxane-d8 B5DL5

1,4-Dioxane

The following volatile samples have one or more DMC/SMC recovery values is less than the primary lower limit but greater than or equal to the expanded lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

1,2-Dichloroethane-d4 B5DM0

1,1,1-Trichloroethane, 1,1,2-Trichloro-1,2,2-trifluoroethane, 1,2-Dibromoethane, 1,2-Dichloroethane, Carbon tetrachloride, Methyl acetate, Methyl tert-butyl ether, Methylene chloride, Trichlorofluoromethane

Chloroform-d B5DM0

1,1-Dichloroethane, Bromochloromethane, Bromoform, Chloroform, Dibromochloromethane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may haye been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. if the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

No problems found for this qualification

C) Trip blank contamination for VOA aqueous samples:

Not Applicable.

D) Storage Blank associated with VOA samples oniy:

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated storage blank common contaminant concentration is less than 2x the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Methylene chloride B5DM0

E) Tics "R" rejected:

None

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitatibn problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified "R"

1, 4-Dioxane and 1, 4-Dioxane-d8 B5DL5, B5DL6, B5DL7, B5DL9, B5DM0, B5E89, VBLKM1, VBLKS2, VBLKS3, VBLKWI, VHBLKM1, VHBLKS1, VHBLKWI

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stabiiity of the specific

compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following volatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

1,2,3-Trichlorobenzene B5DM0, VBLKM1, VHBLKM1

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

None

13. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

None

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DL5
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence fdr the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: March/03/2009

Peer Reviewer's Signature: C. Stamo Date: 3 / 5 /2009

Verified By: R. Amaro Date: 03/05/2009

SDG# B5DL5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. if the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. if the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation br field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) **Method blank contamination:**

No problems found for this qualification

B) **Field or rinse blank contamination:**

The following semi-volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Diethylphthalate B5DL5, B5DL6, B5DL7, B5DLS

Bis(2-ethylhexyl)phthalate B5DL5, B5DL7, B5DL9, B5DM0DL

Benzaldehyde B5DL5, B5DL6, B5DL7

Phenol B5DL5, B5DL6, B5DL7

C) **Trip blank contaminatibn for VOA aqueous samples:**

Not Applicable

D) **Storage Blank associated with VOA samples oniy:**

Nbt Applicable

E) **Tics "R" rejected:**

Concentration of TIC is less than 5x the associated Method Blank in the following samples

B5DL5, B5DL6, B5DL7, B5DL9

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore,

these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all assbciated data will be ciassified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 0.05 in both initial ahd continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound respbnse factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean respbnse factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the Internal standard must not vary more than 30 seconds from the associated continuing calibration standard. if the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification

10. CONTRACT PROBLEMS NON-COMPLIANCE:

No problems

11. FIELD DOCUMENTATION:

No problems

12. OTHER PROBLEMS:

No problems

13. This package contains re-extractions, re-analyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

B5DM0DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DL5
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF Specifications, the National Function Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu — Date: March/3/2009

Peer Reviewer's Signature: C. Stamo — Date: 3 / 5 /2009

SDG# B5DL5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/ CCS rsport.

2. SURROGATES

All samples are spiked with surrogate compounds prior to saniple preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate cbncentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/ CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used In conjunctibn with other QC criteria for additional qualification of data.

No problems found for this qualification as per NFG/ CCS report.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification as per NFG/ CCS report.

5. BLANK CONTAMINATION:

Quality assurance (QA) bianks, i.e., method, field, or rinse bianks are prepared tp identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method bianks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable perfbrmance at the beginning of an experimental sequence. The continuing calibration checks document that the Instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/ CCS report.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic cblumns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Aroclor-1254 B5DL6

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

Aroclor-1254 B5DM0

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:** None.

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

None.

SDG Narrative
Aroclors

Laboratory Name: ALS DataChem
Case: 38236
SDG: B5DL5
EPA Sample Numbers: B5DL5, B5DL6, B5DL6MS, B5DL6MSD, B5DL7, B5DL9, B5DM0, and B5E89.
Contract Number: EP-W-05-026

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. All samples listed above are billable.

Instrumentation: Hewlett Packard 5890 GC/ECD
Column: Restek 0.32m ID X 30M RTX-CLP 0.50 micron film (primary).
Restek 0.32m ID X 30M RTX-CLP2 0.25 micron film (confirmation).

Sample Preparation: All samples were extracted within hold times.

Initial Calibration: All requirements for initial calibration were met.

Continuing Calibration: All continuing calibration requirements were met.

Sample Analysis: The samples were all analyzed within SOW specified hold times.

Dilutions: None.

Blank Analysis: No analytes were detected in the method blank above the CRQL.

LCS Analysis: All recoveries were within established limits.

MS/MSD Analysis: All MS and MSD results were within the established limits.

Surrogates: All samples met surrogate recovery criteria.

Miscellaneous Comments: Samples AR12423C2 and AR12423D2 (column-B) required manual integrations in order to correct the baseline around AR1242 peak-3. Note: all soil samples, except for sample B5DM0, were less than 50% solids.

Equation for Aroclors in water samples (EQ. 7):

EQ. 7 Concentration Calculation for Water Samples

$$\text{Concentration } \mu g/L = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_o)\ (V_i)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_o = Volume of water extracted in mL (Note: for instrument and sulfur blanks assume a volume of 1000 mL).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

DF = Dilution Factor. The DF for analysis of water samples by this method is defined as follows:

$$\frac{\text{uL most concentrated extract used to make dilution + uL clean solvent}}{\text{pL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

$GPC = \frac{V_{in}}{V_{out}}$ = GPC factor. (If no GPC is performed, GPC = 1.0).

V_{in} = Volume of extract loaded onto GPC column.

V_{out} = Volume of extracted collected after GPC cleanup.

Equation for Aroclors in soil samples (EQ. 9):

EQ. 9 Concentration Calculation for Soil Samples

$$\text{Concentration pg/Kg (Dry weight basis)} = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_i)\ (W_s)\ (D)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{eat}$).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column.)

$$D = \frac{100 - \%Moisture}{100}$$

W_x = Weight of sanple extracted in g.

DF = Dilution Factor. The DF for analysis of soil/sediment samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + uL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no modifications except as listed below.

Instrumentation: Hewlett Packard 5972-S GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) with Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Hewlett Packard 5971-L GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm fihn). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) with Tekmar ALS 2016 Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Hewlett Packard 5971-M GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) and Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 10°C (2.0 min.) 8°/min. to 180° (0.1 min.) 30°/min. to 220°.

Sample Preparation: This method has no extraction procedure for the low level soil or water matrices. Soil samples were received in sample cartridges and were extruded and frozen until analysis. Prior to analysis a total of 10 mL of reagent water containing internal standard/ DMC solution was added and the sample was purged. Medium level soil samples were extracted in methanol and a 100 µL aliquot was added to 5.0 mL of reagent water containing internal standard/ DMC mix. A 5.0 mL aliquot of water sample was spiked with internal standard/ DMC solution and purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-bromofluorobenzene as specified in the SOW. This tune is valid for 12 hours.

Initial Calibration and Calibration Verification: The five point initial calibration curve met the specified criteria in the SOW with the exception of the dioxane compounds. All calibration verification standards met method specified criteria (again excepting dioxanes). Due to interfering ions, the secondary 55 ion was used in quantifying methylcyclohexane for some analyses. Any manual integration is noted by an "m" footnote on the quantitation report and a graphics page was included to show peak integration. Analytes which required a manual integration are summarized:

Sample	Initial Scan	Final Scan	Analyte
B5DL6	1083	1113	m,p-xylene

Blank Analysis: Method blanks were prepared using Ottawa Sand and or reagent water spiked with internal standard/DMC solution. All blanks were free of volatile organic contaminants within the specifications of the method.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria unless otherwise noted on forms II and VIII. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: MS/MSD analyses were not required for this SDG.

Sample Calculations: All symbols are defined in section 8.3 of DCL SOP OV-EP-SOM and section 11.2 of SOM01.2. RRF = $(A_xC_{is})/(A_{is}C_x)$; Water Concentration = $(A_xI_sDF)/(V_oA_{is}\underline{RRF})$; Soil Conc.= $(A_xI_sDF)/(DW_sA_{is}\underline{RRF})$; Medium Level Conc. = $(A_xI_sAV_tDF)/(A_{is}\underline{RRF}V_aW_sD)$.

Miscellaneous Comments: As per the SOW, alkanes were not reported separately but rather were reported as "total alkanes." With regard to the naming of tentatively identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has reason to assign a different name. Reasons include but are not limited to previous experience with the compound or an instance where the retention time clearly indicates that a computer generated match is in fact not the compound in question. A specific compound name may be assigned to more than one peak. In any case, TIC naming is tentative and it cannot be assumed that reported compounds and specific isomers are correct.

I certify that this sample data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy sample data package and in the electronic data deliverable has been authorized by the laboratory manager or the manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-05-026
Case: 38236
SDG: B5DL5
Laboratory Name: DataChem Laboratories
DCL Set ID.: 9050005
Sample No.: B5DL5, B5DL6, B5DL7, B5DL9, B5DM0, B5DM0DL, B5E89.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There are no deviations from the SOW. All samples listed above are billable.

Instrumentation: Agilent GC/MS system (ID 5972-N)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 pm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tuhes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blanks met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Analysis: None.

Dilutions: An initial dilution of 1:5 and additional dilution of 1:30 were required for Sample B5DM0.

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety of miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the 276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to each other without baseline resolution between the two peaks. The automated peak finding routine quite

often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chloroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often truncated, leaving the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alklyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

Sample	Analyte	RT (min)	Scan start-stop	
B5DL6	Benzo(b)fluoranthene	17.68	1340	1348
B5DL6	Benzo(k)fluoranthene	17.72	1348	1357
B5DL6	Dibenzo(a,h)anthracene	21.75	1736	1749
B5DL7	Benzo(b)fluoranthene	17.67	1341	1348
B5DL9	Benzo(b)fluoranthene	17.67	1338	1348
B5DL9	Benzo(k)fluoranthene	17.72	1348	1357
B5DL9	Dibenzo(a,h)anthracene	21.73	1736	1750
B5DM0DL	Benzo(b)fluoranthene	17.68	1339	1348
B5DM0DL	Benzo(k)fluoranthene	17.73	1348	1357
B5DM0	Benzo(b)fluoranthene	17.70	1340	1350
B5DM0	Benzo(k)fluoranthene	17.75	1350	1360
SSTD020NM	Caprolactam	6.85	280	297
SSTD080NM	Caprolactam	6.89	281	303
SSTD040NM	Caprolactam	6.86	280	300
SSTD010NM	Indeno(1,2,3-c,d)pyrene	21.73	1731	1748
SSTD005NM	Indeno(1,2,3-c,d)pyrene	21.70	1731	1747
SSTD020NQ	Indeno(1,2,3-c,d)pyrene	21.72	1727	1746

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experiencs with respect to a specific compound. This was the case for Benzo[e]pyrene in Sample B5DM0DL. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. This was the case for 1-Methylnaphthalene in both Sample B5DM0 and Sample B5DM0DL. There may be instances in which a specific compound name is assigned to more than one peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_o)\,(V_i)}$$

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_i)\,(W_s)\,(D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Sample Data Package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DM1, B5DM5 (39 soil samples for VOA, BNA,
PCB) are attached in the Excel format, PDF of all Form Is, as well as the data assessment. The hard copy (Form Is) will be sent to the RPM/OSC
for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (Weston Solutions).

Contact me (Russ) if you have any questions or require information.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG #: B5DM1
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: March /11 /2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DM1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

VDSS3-The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

-B5DM1, B5DR5

- 1,4-Dioxane-d8 B5DM1

-1,4-Dioxane

- 1,2-Dichlorobenzene-d4 B5DR5

-1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorbbenzene, 1,4-Dichlorobenzene, Chlorobenzene

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

VLB11-The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- Acetone B5DM1, B5DM3
- Methylene chloride B5DM1, B5DM3

B) Field or rinse blank contamination:
Not applicable.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:

VLB47-The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- Toluene B5DM3, B5DP9, B5DQ1, B5DQ3, B5DQ5, B5DQ7, B5DQ9, B5DR1, B5DR5

E) Tics "R" rejected:
Substituted Cyclohexene in the following samples: B5DM3, B5DQ3, B5DR5

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane, 1,4-Dioxane-d8

-B5DM1, B5DM3, B5DP9, B5DQ1, B5DQ3, B5DQ5, B5DQ7, B5DQ9, B5DR1, B5DR5, VBLKS1, VBLKS2, VHBLKS1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxahe. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive

identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane, 1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:

VPM1-Percent moisture content of the following volatile soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- B5DM3, B5DQ3, B5DR1

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DM1
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: March / 11 / 2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DM1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

BDSS15-The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- Pyrene-d10 B5DM1, B5DQ5

-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

- Benzo (a) pyrene-d12 B5DM1

-Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during

field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
Not applicable.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
Concentration of TIC is less than 5X the associated Storage Blank Contamination in the following samples:
-B5DP9, B5DQ1, B5DQ3, B5DQ5, B5DQ7, B5DQ9, B5DR1, B5DR5

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be

rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factbr of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

BC5-The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Nondetected compounds are not qualified.

- Pentachlorophenol SSTD080YU

-B5DP9, B5DQ1, B5DQ3, B5DQ5, B5DQ7, B5DQ9, B5DR1, B5DR5, SBLK56

BC 10-The following semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- Pentachlorophenol SSTD020NZ

-B5DP9, B5DQ1, B5DQ3, B5DQ5, B5DQ7, B5DQ9, B5DR1, B5DR5, SBLK56

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE: No problems.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:

Percent Moisture:

Percent moisture content of the following semivolatile soil samples are greater than or equal to 70% but less than or equal to 90%. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- B5DM3, B5DQ3, B5DR1

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DM1
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according tp TDF Specifications, the National Function Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: March / 11 / 2009

Peer Reviewer's Signature: _____ Date: ____/___/ 2009

Verified By: _____ Date: ____/____/ 2009

SDG# B5DM1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/ CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/ CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

No problems found for this qualification as per NFG/ CCS report.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification as per NFG/ CCS report.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) **Method blank contamination:**

No problems found for this qualification.

B) **Field or rinse blank contamination:**

Not applicable.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/ CCS report.

7. **COMPOUND IDENTIFICATION:**

A) **PCB Fraction:**

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

QUALIFIED U:

ADL332-The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-B5DQ1, B5DQ7

- Aroclor-1260 B5DQ1
- Aroclor-1242 B5DQ7

QUALIFIED J:

ADL312-The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

- Aroclor-1254 B5DP9, B5DQ1, B5DR1
- Aroclor-1242 B5DP9

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**

PERCENT MOISTURE:

APM1-Percent moisture content of the following aroclor soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- B5DM3, B5DM3MS, B5DM3MSD, B5DQ3, B5DR1

11. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DM5
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SQM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Peer Reviewer's Signature: _____ Date: ___/___/2009

Verified By: _____ Date: ___/___/2009

SDG# B5DM5

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

Benzene-d6 B5DR7RE

Benzene

1,4-Dioxane-d8 B5DM5

1,4-Dioxane

The following volatile samples have one or more DMC/SMC recovery values is less than the primary lower limit but greater than or equal to the expanded lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

1,2-Dichloroethane-d4 B5DP3, B5DR3

1,1,1-Trichloroethane, 1,1,2-Trichloro-1,2,2-trifluoroethane, 1,2-Dibromoethane, 1,2-Dichloroethane, Carbon tetrachloride, Methyl acetate, Methyl tert-butyl ether, Methylene chloride, Trichlorofluoromethane

1,1,2,2-Tetrachloroethane-d2 B5DM7

1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-chloropropane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may haye been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
Not applicable.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated storage blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Methylene chloride B5DM5, B5DM7, B5DM9, B5DN3, B5DN7, B5DP1, B5DP5, B5DP7, B5DR7, B5DR7RE, B5E11, B5E13, B5E15

The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DM5, B5DM7, B5DM9, B5DN1, B5DN3, B5DN5, B5DN7, B5DN9, B5DP1, B5DP5, B5DP7, B5DR7, B5DR7RE, B5DR9, B5E11, B5E13, B5E15, B5E47

Trichlorofluoromethane B5E13

E) Tics "R" rejected: None.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane B5DM5, B5DM7, B5DM9, B5DN1, B5DN3, B5DN5, B5DN7, B5DN9, B5DP1, B5DP3, B5DP5, B5DP7, B5DR3, B5DR7, B5DR7RE, B5DR9, B5E11, B5E13, B5E15, B5E47, VBLKM1, BLKS1, VBLKS2, VHBLKM1, VHBLKS1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss bf sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dichlorobenzene-d4 B5DR7, B5DR7RE

Bromoform,1,2,3-Trichlorobenzene,1,2-Dichlorobenzene,1,2-Dibromo-3-chloropropane,1,2,4-Trichlorobenzene,1,4-Dichlorobenzene,1,3-Dichlorpbenzene

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:
Percent moisture content of the following volatile soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DM7, B5DR7, B5DR7RE, B5E15

NOTE: There is a discrepancy between sampling trip report and Traffic Report/ data package for sample ID. Sample ID is reported as B5DM8 on the sampling trip report and same sample is reported as B5DM9 on the Traffic Report/ data package.

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DR7RE

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
Not applicable.

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
Not applicable.

E) **Tics "R" rejected:**
Concentration of TIC is less than 5X the associated Method Blank Contamination in the following samples:
B5DM5, B5DM7, B5DM9, B5DN1, B5DN3, B5DN5, B5DN9, B5DP1, B5DP5, B5DP7, B5DR7, B5DR9, B5E11, B5E13, B5E15, B5E47

The TIC compound as suspected artifact of a common laboratory contaminant, siloxanes (m/e 73), is detected in the following samples. However, it is not found in any blank. These TICs results are qualified rejected R.
B5DN7

The TIC compound as suspected solvent preservative, substituted cyclohexene, is detected in the following samples. However, it is not found in any blank. These TICs results are qualified rejected R.
B5DP3

1,1'-Biphenyles are qualified rejected R in the following samples.
B5DP3, B5DR3

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable qf giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The

response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All noh-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) **Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Hexachlorobenzene

B5DN7, B5DR3

Pentachlorophenol

B5DN1, B5DN5, B5DN5, B5DN9, B5DP1, B5DP3, B5DP5, B5DP7, B5DR7, B5DR9, B5E11, B5E13, B5E15, B5E47

7. **INTERNAL STANDARDS PERFORMANCE GC/MS:**

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. **COMPOUND IDENTIFICATION:**

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE: No problems.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:
Percent moisture content of the following semivolatile soil samples are greater than or equal to 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
B5DM7, B5DR7, B5E15

NOTE: There is a discrepancy between sampling trip report and Traffic Report/ data package for sample ID. Sample ID is reported as B5DM5 on the sampling trip report and same sample is reported as B5DM9 on the Traffic Report/ data package.

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Subject
Organic Data Validation Completion - Newtown Creek Site - Case # 38236

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DS1 (19 soil samples for VOA, BNA, PCB) are attached in the Excel format, PDF of all Form 1s, as well as the data assessment. The hard copy (Form Is) will be sent to the RPM/OSC for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (Weston Solutions).

Contact me (Hanif) if you have any questions or require information.

(See attached file: 38236--B5DS1--PCB--DA.doc)(See attached file: 38236--B5DS1.pdf)(See attached file: 38236--B5DS1--BNA.DA.doc)(See attached file: 38236----MB5DS1.xls)(See attached file: 38236--B5DS1--VOA.DA.doc)
