Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236 **SDG No.: B5DS1**
LABORATORY: DataChem **SITE: Newtown Creek**
SAMPLER: W-SAT **ANALYSIS: VOA**

DATA ASSESSMENT

The current SOP HW-33A/OA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi-Automated Screening Results Report.

All data are valid ahd acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu **Date:** March/16/2009

Peer Reviewer's Signature: C. Hanno **Date:** 3/16/2009

Verified By: M. Handschuh **Date:** 3/17/2009

SDG# B5DS1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report

2. DMC's

All samples are spiked with surrogate comppunds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and ahalytes as shown below.

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

Benzene-d6 B5DS5RE, B5DS9RE, B5DT3RE, B5DT7, B5DW1, B5DW3, B5DW5, B5DW5RE, B5DW7, B5DW9, B5DW9RE, B5DX1, B5DX1RE, B5DX3, B5DX5, B5DX9RE

Benzene

1,4-Dioxane-d8 B5DS1, B5DS3, B5DS7, B5DT9, B5DW7RE, B5DX1RE, B5DX3RE

1,4-Dioxane

Toluene-d8 B5DW5, B5DW9, B5DW9RE

Ethylbenzene, Isopropylbenzene, Styrene, Tetrachloroethene, Toluene, Trichloroethene, m,p-Xylene, o-Xylene

1,2-Dichlorobenzene-d4 B5DW5, B5DW5RE, B5DW9, B5DW9RE, B5DX3

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Chlorobenzene

1,1,2,2-Tetrachloroethane-d2 B5DW5, B5DW9, B5DW9RE

1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-chloropropane

trans-1,3-Dichloropropene-d4 B5DW9

1,1,2-Trichloroethane, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene

1,2-Dichloropropane-d6 B5DS5RE, B5DS9RE, B5DT3RE, B5DW1, B5DW3, B5DW5, B5DW5RE, B5DW9, B5DW9RE, B5DX1

1,2-Dichloropropane, Bromodichloromethane, Cyclohexane, Methylcyclohexane

The following volatile samples have one or more DMC/SMC recovery values is less than the primary lower limit but greater than or equal to the expanded lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

1,4-Dioxane-d8 B5DW3, B5DW7

1,4-Dioxane

trans-1,3-Dichloropropene-d4 B5DS9RE, B5DT3RE, B5DX5, B5DX5RE

1,1,2-Trichloroethane, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene

The following volatile samples have DMC/SMC recoveries below the expanded lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane-d8 B5DW9

1,4-Dioxane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical

method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks nieasure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

Ttie following volatile samples have commpn contaminant concentrations reported less than 2x the CRQL. The associated rinse blank concentration is less than 2x the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DS1, B5DS3, B5DS5, B5DS7, B5DS9, B5DS9RE, B5DT1, B5DT1RE, B5DT3, B5DT3RE, B5DT5, B5DT7, B5DT9, B5DW1, B5DW1RE, B5DW3, B5DW3RE, B5DW5, B5DW5RE, B5DW7, B5DW7RE, B5DW9, B5DW9RE, B5DX1, B5DX1RE, B5DX3, B5DX3RE, B5DX5, B5DX5RE, B5DX9, B5DX9RE.

Acetone B5DT7, B5DW1

C) Trip blank contamination for VOA aqueous samples:

Not Applicable.

D) Storage Blank associated with VOA samples only:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Trichlorofluoromethane B5DS3, B5DT1, B5DT3RE, B5DT5, B5DT9, B5DW1RE, B5DW3, B5DW3RE, B5DW5, B5DW5RE, B5DW9RE, B5DX1, B5DX1RE, B5DX3RE, B5DX5, B5DX9, B5DX9RE

E) **Tics "R" rejected:**

Cyclohexene was found & was rejected in the following samples B5DX3, B5DX5RE

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified "R"

1, 4-Dioxane and 1, 4-Dioxane-d8 B5DS1, B5DS3, B5DS5, B5DS5RE, B5DS7, B5DS9, B5DS9RE, B5DT1, B5DT1RE, B5DT3, B5DT3RE, B5DT5, B5DT7, B5DT9, B5DW1, B5DW1RE, B5DW3, B5DW3RE, B5DW5, B5DW5RE, B5DW7, B5DW7RE, B5DW9, B5DW9RE, B5DX1, B5DX1RE, B5DX3, B5DX3RE, B5DX5, B5DX5RE, B5DX9, B5DX9RE, B5E91, VBLKS1, VBLKS2, VBLKS3, VBLKW1, VHBLKS1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the Initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxahe. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. Fpr these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the Internal standard must not vary more thaq 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dichlorobenzene-d4 B5DS5, B5DS5RE, B5DS9, B5DS9RE, B5DT1, B5DT1RE, B5DT3, B5DT3RE, B5DT7, B5DW1, B5DW1RE, B5DW3, B5DW3RE, B5DW5, B5DW5RE, B5DW7, B5DW7RE, B5DW9, B5DW9RE, B5DX1, B5DX1RE, B5DX3, B5DX3RE, B5DX5, B5DX5RE, B5DX9, B5DX9RE

Bromoform, 1,2,3-Trichlorobenzene, 1,2-Dichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichloroberizene, 1,4-Dichlorobenzene, 1,3-Dichlorobenzene

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. Fpr the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive Identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

Percent moisture content of the following volatile soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DS3, B5DS7, B5DT1, B5DT1RE, B5DT5, B5DW5, B5DW5RE, B5DW7, B5DW7RE, B5DW9, B5DW9RE, B5DX1, B5DX1RE, B5DX3, B5DX3RE, B5DX5, B5DX5RE, B5DX9, B5DX9RE

13. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT tp be used.

B5DS5RE, B5DS9, B5DT1RE, B5DT3RE, B5DW1RE, B5DW3RE, B5DW5RE, B5DW7RE, B5DW9RE, B5DX1RE, B5DX3RE, B5DX5RE, B5DX9RE.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DS1
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: R. J. Shelley Raxa J Shellev Date: March/16/2009

Peer Reviewer's Signature: Date: 03 / 17 /2009

Verified By: Date: 3 / 17 /2009

SDG# B5DS1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. if the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified.

Bis (2-Ethylhexyl) phthalate B5DS1, B5DS3, B5DS5, B5DS7, B5DS9, B5DT1, B5DT3, B5DT5, B5DT7, B5DT9, B5DW1, B5DW3, B5DW7, B5DX9

B) Field or rinse blank contamination:
No additional qualification due to rinse blank contamination.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
Concentration of TIC is less than 5X the associated Rinse Blank Contamination in the following samples:
B5DT9, B5DW3, B5DW9DL, B5DX1, B5DX3, B5DX5

The TIC compound as suspected solvent preservative, substituted cyclohexene and related by-products as cyclohexanone and cyclohexanol, are detected in the following samples. However, it is not found in any blank. These TICs results are qualified rejected R.
B5DS3, B5DT3, B5DW1, B5DW5, B5DX5

1,1'-Biphenyles are qualified rejected R in the following samples.
B5DW5DL, B5DW9

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorptriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Pentachlorophenol

B5E91, SBLK06

The following semivolatile samples are assbciated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Pyrene

B5DW5DL, B5DW9DL

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal staridard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

if an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

Nd problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
Pentachlorophenol
Percent relative standard deviation (%RSD) fell outside Contractual Criteria in the initial Calibration.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:
Percent moisture content of the following semivolatile soil samples are greater than or equal to 70% but less than or equal to 90% . Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DS3, B5DS7, B5DT1, B5DT5, B5DW5, B5DW5DL, B5DW7, B5DW9, B5DW9DL, B5DX1, B5DX3, B5DX5, B5DX9

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DW5DL, B5DW9DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DS1
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: R. J. Shelley Raxa J Shellev — Date: March/16/2009

Peer Reviewer's Signature: _____ — Date: 03 /17/2009

Verified By: _____ — Date: ____/____/2009

SDG# B5DS1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. if the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded wiil be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The foliowing action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the ahaiytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

No problems found for this qualification as per NFG/CCS report.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown beiow.

No problems found for this qualification as per NFG/CCS report.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse bianks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentrafion of the analyte in the blank, the analytes are qualified as non-detects U.

The following analytes ih the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for ail analytes and the two surrogates, qualify aii associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/CCS report.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fail within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/mi in the final sample extract.

The percent difference between analyte results for the following Aroclor samples is greater than 25%. The following action is taken based on percent difference. Percent difference ranging from 26% - 50%, hits are qualified J, 51%-100%, hits are qualified JN, >100%, hits are qualified R. Aroclor value < CRQL and % D > 50%, hits are raised to the CRQL and qualified U.

QUALIFIED J:
Aroclor-1242 B5DW9

QUALIFIED JN:
Aroclor-1254 B5DX3

QUALIFIED U:
Aroclor-1254 B5DS1, B5DS3, B5DS5, B5DS7, B5DS9, B5DT1, B5DT3, B5DT5, B5DT7, B5DT9, B5DW1, B5DW3, B5DW7, B5DX1, B5DX5

QUALIFIED R:
Aroclor-1254 B5DW5, B5DW9, B5DX9

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**
Percent moisture content of the following aroclor soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
B5DS3, B5DS7, B5DT1, B5DT5, B5DW5, B5DW7, B5DW9, B5DX1, B5DX3, B5DX5, B5DX9

11. **This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.**
None.

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no modifications except as listed below.

Instrumentation: Hewlett Packard 5972-S GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: Tekmar LSC 2000 Concentrator (Vocarb trap) with Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Hewlett Packard 5975-B GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: Restek VMS (30 m, 0.25 mm id, 1.4 µun film). Purge & Trap: Ol Analytical 4660 Concentrator (#10 trap) and Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (5.0 min.) 15°/min. to 200° (0.0 min.) 30°/min. to 230°(2.67 min.).

Sample Preparation: This method has no extraction procedure for the low level soil or water matrices. Soil samples were received in sample cartridges and were extruded and frozen until analysis. Prior to analysis a total of 10 mL of reagent water containing internal standard/ DMC solution was added and the sample was purged. A 5.0 mL aliquot of water sample was spiked with internal standard/ DMC solution and purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-bromofluorobenzene as specified in the SOW. This tune is valid for 12 hours.

Initial Calibration and Calibration Verification: The five point initial calibration curve met the specified criteria in the SOW with the exception of the dioxane compounds. All calibration verification standards met method specified criteria (again excepting dioxanes). Due to interfering ions, the secondary 55 ion was used in quantifying methylcyclohexane for some analyses. Any manual integration is noted by an "m" footnote on the quantitation report and a graphics page was included to show peak integration. Analytes which required a manual integration are summarized:

Sample	Initial Scan	Final Scan	Analyte
VSTD200BW	133	174	trichlorofluoromethane
B5DW5	579	595	cyclohexane
B5DW5RE	580	593	cyclohexane
B5DW9	579	596	cyclohexane
B5DW9RE	579	595	cyclohexane

Blank Analysis: Method blanks were prepared using reagent water and or Ottawa Sand spiked with internal standard/DMC solution. All blanks were free of volatile organic contaminants within the specifications of the method.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria unless otherwise noted on forms II and VIIi. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: MS/MSD analyses were not required for this SDG.

Sample Calculations: All symbols are defined in section 8.3 of DCL SOP OV-EP-SOM and section 11.2 of SOM01.2. RRF = $(A_xC_{is})/(A_{is}C_x)$; Water Concentration = $(A_xI_sDF)/(V_oA_{is}\underline{RRF})$; Soil Conc.= $(A_xI_sDF)/(DW_sA_{is}\underline{RRF})$; Medium Level Conc. = $(A_xI_sAV_tDF)/(A_{is}\underline{RRF}V_aW_sD)$.

Miscellaneous Comments: As per the SOW, alkanes were not reported separately but rather were reported as "total alkanes." With regard to the naming of tentatively identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has reason to assign a different name. Reasons include but are not limited to previous experience with the compound or an instance where the retention time clearly indicates that a computer generated match is in fact not the compound in question. A specific compound name may be assigned to more than one peak. In any case,

TIC naming is tentative and it cannot be assumed that reported compounds and specific isomers are correct.

Multiple samples contained percent moisture results greater than 50%. Results are reported on form I.

Sample 9058028011 (B5DT7) was purging when the instrument filament bumed out. There is no usable data for that aliquot. The second volatile aliquot was analyzed but the internal standard recovery for 1,4-dichlorobenzene-d4 failed. As the third volatile aliquot had been extracted and used for screening/medium level purposes there was no further volatile sample remaining tb perform a re-analysis.

I certify that this sample data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy sample data package and in the electronic data deliverable has been authorized by the laboratory manager or the manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-05-026
Case: 38236
SDG: B5DS1
Laboratory Name: DataChem Laboratories
DCL Set ID.: 9058028
Sample No.: B5DS1, B5DS3, B5DS5, B5DS7, B5DS9, B5DT1, B5DT3, B5DT5, B5DT7, B5DT9, B5DW1, B5DW3, B5DW5, B5DW5DL, B5DW7, B5DW9, B5DW9DL, B5DX1, B5DX3, B5DX5, B5DX9, B5E91.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There are no deviations from the SOW. All samples listed above are billable.

Instmmentation: Agilent GC/MS system (ID 5972-N and 5973-Y)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 µm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tunes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blanks met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Analysis: None.

Dilutions: The following dilution factors were employed: B5DW5DL (3), B5DW9DL (2).

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety of miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in Its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the 276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and

near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to each other without baseline resolution between the two peaks. The automated peak finding routine quite often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chioroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often tmncated, leaving the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alklyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experience with respect to a specific compound. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. There may be instances ih which a specific compound name is assigned to more than one peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_s)\ (I_s)\ (V_t)\ (DF)\ (GPC)}{(A_{is})\ (\overline{RRF})\ (V_o)\ (V_i)}$$

The ALS Laboratory Group

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\ (I_s)\ (V_t)\ (DF)\ (GPC)}{(A_{is})\ (\overline{RRF})\ (V_i)\ (W_s)\ (D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

I certify that this Sample Data Package is in compliance with the tenns and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Sample Data Package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

SDG Narrative
Aroclors

Laboratory Name: ALS DataChem
Case: 38236
SDG: B5DS1
EPA Sample Numbers: B5DS1, B5DS3, B5DS5, B5DS5MS, B5DS5MSD, B5DS7, B5DS9, B5DT1, B5DT3, B5DT5, B5DT7, B5DT9, B5DW1, B5DW3, B5DW5, B5DW7, B5DW9, B5DX1, B5DX3, B5DX5, B5DX9, and B5E9L
Contract Number: EP-W-05-026

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. All samples listed above are billable.

Instrumentation: Hewlett Packard 5890 GC/ECD
Column: Restek 0.32m ID X 30M RTX-CLP 0.50 micron film (primary).
Restek 0.32m ID X 30M RTX-CLP2 0.25 micron fibn (confirmation).

Sample Preparation: All samples were extracted within hold times.

Initial Calibration: All requirements for initial calibration were met.

Continuing Calibration: All continuing calibration requirements were met.

Sample Analysis: The samples were all analyzed within SOW specified hold times.

Dilutions: None.

Blank Analysis: No analytes were detected in the method blank above the CRQL.

LCS Analysis: All recoveries were within established lihits.

MS/MSD Analysis: All MS and MSD results were within the established limits.

Surrogates: All samples met surrogate recovery criteria.

Miscellaneous Comments: All soil samples were less than 50% solids.

This chart summarizes the amount (ng) of each compound in each type of standard:

Equation for Aroclors in water samples (EQ. 7):

EQ. 7 Concentration Calculation for Water Samples

$$\text{Concentration } \mu g/L = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_o)\ (V_i)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_o = Volume of water extracted in mL (Note: for instrument and sulfur blanks assume a volume of 1000 mL).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

DF = Dilution Factor. The DF for analysis of water samples by this method is defined as follows:

$$\frac{\text{uL most concentrated extract used to make dilution + uL clean solvent}}{\text{pL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

$GPC = \frac{V_{in}}{V_{out}}$ = GPC factor. (If no GPC is performed, GPC = 1.0).

V_{in} = Volume of extract loaded onto GPC column.

V_{out} = Volume of extracted collected after GPC cleanup.

Equation for Aroclors in soil samples (EQ. 9):

EQ. 9 Concentration Calculation for Soil Samples

$$\text{Concentration pg/Kg (Dry weight basis)} = \frac{(A_x)\,(V_t)\,(DF)\,(GPC)}{(\overline{CF})\,(V_i)\,(W_x)\,(D)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column.)

$$D = \frac{100 - \%Moisture}{100}$$

W_s = Weight of sample extracted in g.

DF = Dilution Factor. The DF for analysis of soil/sediment samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DX7, B5DY9 (22 soil samples and 1 water sample for VOA, BNA, PCB) are attached in the Excel format, PDF of all Form Is, as well as the data assessment. The hard copy (Form Is) will be sent to the RPM/OSC for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (Weston Solutions).

Contact me (Russ) if you have any questions or require information.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DX7
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33A/OA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presehce of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J Shellev Date: March/17/2009

Peer Reviewer's Signature: _____ Date: ___/___/2009

Verified By: _____ Date: ___/___/2009

SDG# B5DX7

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Thpse analytes detected In the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

1,4-Dioxane-d8 B5DZ7, B5E01, B5E03, B5E49, B5E51
1,4-Dioxane

1,1,2,2-Tetrachloroethane-d2 B5DY7
1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-chloropropane

2-Hexanone-d5 B5E51
2-Hexanone, 4-Methyl-2-pentanone

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2

times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Methylene chloride B5DY5, B5DZ7, B5E01, B5E03

B) Field or rinse blank contamination:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DX7, B5DY3, B5DZ9, B5E01, B5E03, B5E51

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated rinse blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Acetone B5DZ9

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated rinse blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified.

Acetone B5DY1, B5DY3, B5DY5, B5DZ7

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
No additional qualification due to storage blank contamination.

E) Tics "R" rejected:
The TIC compound as suspected solvent preservative, related by-products of cyclohexene as cyclohexanone, is detected in the following samples. However, it is not found in any blank. These TICs results are qualified rejected R.
B5DZ7

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitatibn problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane B5DX7, B5DY1, B5DY3, B5DY5, B5DY7, B5DZ7, B5DZ9, B5E01, B5E03, B5E05, B5E49, B5E51, VBLKW1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% tb +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:
Percent moisture content of the following volatile soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
B5DX7, B5DY1, B5DY3, B5DY5, B5E01, B5E49, B5E51

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are Identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DX7
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J Shellev Date: March/18/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DX7

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Pyrene-d10 B5E01
Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, I.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte Is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified.
Bis (2-Ethylhexyl) phthalate B5DX7, B5DY1, B5DY3, B5DY5, B5E01, B5E49

B) **Field or rinse blank contamination:**
The following semivolatile samples have analyte concentrations reported less than CRQL. The associated rinse blank concentration is less than CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified.. Reported sample concentrations have been elevated to the CRQL.
Di-n-butyphthalate B5DY1, B5DY3, B5DZ7, B5E01, B5E05, B5E51

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
Not applicable.

E) **Tics "R" rejected:**
Concentration of TIC is less than 5X the associated Rinse Blank Contamination in the following samples:
B5DX7, B5DY3, B5DZ7, B5E01, B5E05, B5E49, B5E51

1,1'-Biphenyles are qualified rejected R in the following samples.
B5DY3, B5DY7, B5DZ7, B5DZ9, B5E01, B5E03, B5E05, B5E51

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient Instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory Instrument calibration is established to ensure that the Instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and Is used to indicate the stability of the specific compound response factor over Increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D Is a measure of the instrument's dally performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.
Pentachlorophenol
B5DX7, B5DY1, B5DY3, B5DY5, B5DY7, B5DZ7, B5DZ9, B5E01, B5E03, B5E05, B5E49, B5E51, SBLK07

The following semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
2,4-Dimethylphenol
B5DY7, B5DZ7, B5DZ9, B5E01, B5E03, B5E05, B5E49, B5E51

4-Methylphenol
B5DY7, B5DZ7, B5E03, B5E05, B5E49, B5E51

2,3,4,6-Tetrachlorophenol
B5DZ9, B5E01

2,4,5-Trichlorophenol
B5DZ9, B5E01

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable

during every experimental run. The Internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification as per NFG/CCS report.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the Ion spectra must match accurately. In the cases where there Is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
Pentachlorophenol
Percent relative standard deviation (%RSD) fell outside Contractual Criteria in the initial Calibration.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:
Percent moisture content of the following semivolatile soil samples are greater than or equal to 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
B5DX7, B5DY1, B5DY3, B5DY5, B5E01, B5E49, B5E51

Field Duplicate: Sample B5E51 was collected as a field duplicate of sample B5E01. The relative percent difference (%RPD) is greater than 50% for several compounds. Additionally, sample B5E51 was analyzed undiluted and sample B5E01 was analyzed at a 1:3 dilution.

Samples B5DY7, B5DZ7, B5DZ9, B5E01 and B5E03 are analyzed diluted.

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are Identified NOT to be used.

None.

Functional Guidelines fbr Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DX7
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J Shellev Date: March/19/2009

Peer Reviewer's Signature: _____ Date: ____/___/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DX7

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification as per NFG/CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with pther QC criteria for additional qualification of data.

No problems found for this qualification as per NFG/CCS report.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification as per NFG/CCS report.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) **Method blank contamination:**
No problems found for this qualification.

B) **Field or rinse blank contamination:**
No problems found for this qualification.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that Is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification as per NFG/CCS report.

7. **COMPOUND IDENTIFICATION:**

A) **PCB Fraction:**

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation Is required if the concentration exceeds 10ng/ml In the final sample extract.

The percent difference between analyte results for the following Aroclor samples is greater than 25%. The following action is taken based on percent difference. Percent difference ranging from 26% - 50%, hits are qualified J, 51%-100%, hits are qualified JN, >100%, hits are qualified R. Aroclor value < CRQL and % D > 50%, hits are raised to the CRQL and qualified U.

QUALIFIED J:
Aroclor-1260 ALCSS1
Aroclor-1254 B5DX7, B5DY1, B5DY3, B5DY7, B5DY7DL, B5DZ7, B5E05, B5E05DL
Aroclor-1016 ALCSS1
Aroclor-1242 B5DX7, B5DY3, B5DY7, B5DY7DL, B5DZ9, B5E03, B5E05, B5E49, B5E51

QUALIFIED JN:

Aroclor-1254 B5DZ9, B5E01, B5E03
Aroclor-1242 B5DZ7, B5E01

QUALIFIED U:
Aroclor-1254 B5DY5, B5E49

QUALIFIED R:
Aroclor-1254 B5E51

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**
Percent moisture content of the following aroclor soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.
B5DX7, B5DY1, B5DY5, B5DY5, B5DY5MS, B5DY5MSD, B5E01, B5E49, B5E51

Field Duplicate: Sample B5E51 was collected as a field duplicate of sample B5E01. The relative percent difference (%RPD) is greater than 50% for Aroclor-1242.

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DY7DL, B5E05DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DY9
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration Is unreliable.

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

1,4-Dioxane-d8 B5DZ1, B5DZ5, B5E79, B5E83, B5E85

1,4-Dioxane

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination

of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualitication

B) Field or rinse blank contamination:

The following volatile samples have common contaminant concentrations reported less than 2x the CRQL. The associated rinse blank concentration is less than 2x the concentration criteria. Detected compounds are qualitied U. Non-detected compounds are not qualitied. Reported sample concentrations have been elevated to the CRQL.

Acetone B5DY9, B5DZ1, B5DZ5, B5E77, B5E79, B5E81, B5E83, B5E85

The following volatile samples have analyte concentrations reported less thah the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualitied U. Non-detected compounds are not qualitied. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DZ1

C) Trip blank contamination for VOA aqueous samples:

Not Applicable.

D) Storage Blank associated with VOA samples only:

No problems found for this qualitication

E) Tics "R" rejected:

Cyclohexanone was found & was rejected "R" ih the following samples B5DZ3

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified "R"

1, 4-Dioxane and 1, 4-Dioxane-d8 B5DY9, B5DZ1, B5DZ3, B5DZ5, B5E77, B5E79, B5E81, B5E83, B5E85, B5E87, B5E93, VBLKS1, VBLKW1, VHBLKS1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dipxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there Is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

Percent moisture content of the following volafile soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DY9, B5DZ3, B5DZ5, B5E77

13. **This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the follbwing Form 1(s) are identified NOT to be used.**

None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DY9
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: March/19/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DY9

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken In the samples and analytes shown due to excessive holding time.

No problems found for this qualification as per NFG/CCS report

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following semi-volatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Pyrene-d10 B5E83

Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

Phenol-d5 B5E93

Benzaldehyde, Phenol

2-Chlorophenol-d4 B5E93

2-Chlorophenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical

method In various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

The following semi-volatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the concentration criteria. Detected compounds are qualitied U. Non-detected compounds are not qualitied. Reported sample concentrations have been elevated to the CRQL.

Bis (2-Ethylhexyl) phthalate B5DY9, B5E77, B5E79, B5E81, B5E83, B5E85, B5E87

B) Field or rinse blank contamination:

The following semi-volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualitied U. Non-detected compounds are not qualitied. Reported sample concentrations have been elevated to the CRQL.

Di-n-butylphthalate B5DY9, B5DZ3, B5DZ5, B5E77, B5E79, B5E81, B5E83, B5E85.

C) Trip blank contamination for VOA aqueous samples:

Not Applicable

D) **Storage Blank associated with VOA samples only:**

Not Applicable

E) **Tics "R" rejected:**

1,1-Biphenyl was found & was rejected "R" in the following samples B5DY9, B5DZ1.

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

if the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory dally performance.

A) **Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report

B) **Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration.

Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification as per NFG/CCS report

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated contihuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe lbss bf sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are Identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that In the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification

10. CONTRACT PROBLEMS NON-COMPLIANCE:

No problems

11. FIELD DOCUMENTATION:

No problems

12. **OTHER PROBLEMS:**

Percent moisture content of the following semi-volatile soil samples are greater than or equal to 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DY9, B5DZ3, B5DZ5, B5E77

13. **This package contains re-extractions, re-analyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.**

None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DY9
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF Specifications, the National Function Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: March/18/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DY9

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualificafion as per NFG/ CCS report.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualificafion as per NFG/ CCS report.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

The following Aroclor matrix/matrix spike duplicate samples have percent recoveries that are greater than the upper acceptance limit Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1260 B5DY9MSD, B5DY9MS, B5DY9

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualificafion as per NFG/ CCS report.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and noh-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

The following aroclor samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualitied J. Non-detected compounds are qualitied UJ.

Aroclor-1016 ABLKS1, ABLKW1, B5DY9, B5DY9MS, B5DY9MSD, B5DZ1, B5DZ3, B5DZ5, B5E77, B5E79, B5E81, B5E83, B5E85, B5E87, B5E93

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

Aroclor-1260 B5DY9MS, B5DY9MSD
Aroclor-1016 B5DY9MS, B5DY9MSD

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified JN.

Aroclor-1254 B5DZ1

The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Aroclor-1254 B5DY9, B5DZ5, B5E79

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified R.

Aroclor-1254 B5DZ3

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**

Percent moisture content of the following aroclor soil samples are greater than 70% but less than or equal to 90%. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B5DY9, B5DY9MS, B5DY9MSD, B5DZ3, B5DZ5, B5E77

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

None.

Subject: Inorganic Data Validation Completion - Newtown Creek Site - Case # 38236

Attachments: 38236--MB5E78.doc; 38236---MB5E78.xls; 38236---MB5E78.pdf

38236--MB5E78.doc (60 KB) 38236---MB5E78.xls (103 KB) 38236---MB5E78.pdf (74 KB)

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek Case # 38236 SDG # MB5E78
Samples- 6 Soil & 1 Aqueous Field Blank Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 03/23/09

Data Validation Summary

No result was rejected. Few analyte results were flagged (J) as estimated due to the ICP serial dilution analysis being outside the control limits. In addition, all soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5E78D) and Matrix Spiked Sample (MB5E78S). Please do not use these QC samples to make environmental decisions.

If you have any questions, please call me (Hanif) at (732)906-6169.

(See attached file: 38236--MB5E78.doc)(See attached file: 38236---MB5E78.xls)(See attached file: 38236---MB5E78.pdf)

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 6
SDG# MB5E78	Lab: CHEMTECH	Water: 1
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I=S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I=S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL).. A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with AU@.

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of one (1) aqueous and six (6) soil samples collected at the Newtown Creek site on 3/10/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5E78. The aqueous sample in this case was identified as field blank. Consequently, no matrix spike, laboratory duplicate or ICP serial dilution analyses were performed for the aqueous matrix.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5E78

ICB/CCB

The Calibration Blanks values were ≥MDL but ≤CRQL for Al, Cd, Ca, Cu, Fe, Tl, and Zn. (Only analytes that required qualifications were mentioned.) The following associated positive results ≤CRQL were raised to the CRQL and qualified AU@.

"U" -> Cd -> **MB5E78, MB5E80, MB5E82, MB5E84, MB5E88**

Al, Ca, Cu, Fe, Tl, Zn -> **MB5E92**

PREPARATION BLANK (WATER)

The Preparation Blank values were ≥MDL but ≤CRQL for Ca, Fe and Mg. (Only analytes that required qualifications were mentioned.) The associated positive results ≤CRQL were raised to the CRQL and qualified AU@.

"U" -> Ca*, Fe*, Mg -> MB5E92

ICP SERIAL DILUTION (SOIL)

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50X MDL for Cu (%D = 12), Pb (%D = 16), and Zn (%D = 13). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Cu, Pb, Zn -> MB5E78, MB5E80, MB5E82, MB5E84, MB5E86, MB5E88

PERCENT SOLIDS

The percent solids was less than 50 for all six soil samples in this SDG. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified _-> MB5E78, MB5E80, MB5E82, MB5E84, MB5E86, MB5E88

* already qualified

A.2.3.4 Contract-Problem/Non-Compliance: None.

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek Case # 38236 SDG # MB5DL8
Samples- 6 Soil
Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 03/26/09

Data Validation Summary

No result was rejected. Few analyte results were flagged (J) as estimated due to the ICP serial dilution analysis being outside the control limits. In addition, all soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5DL8D), Matrix Spiked Sample (MB5DL8S) and Post Digestion Spiked sample (MB5DL8A) . Please do not use these QC samples to make environmental decisions.

If you have any questions, please call me (Hanif) at (732)906-6169.

(See attached file: 38236--MB5DL8--DA.doc)(See attached file: 38236--MB5DL8.pdf)(See attached file: 38236---MB5DL8.xls)

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 6
SDG# MB5DL8	Lab: CHEMTECH	Water: 0
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I'S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I'S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that Iaboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with "U".

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of six (6) soil samples collected at the Newtown Creek site on 3/13/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5DL8.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DL8

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 58). All other associated results have been considered estimated and qualified "J".

"J" -> Sb -> **MB5DL8, MB5DM2, MB5DM6, MB5DM8, MB5DN0, MB5DN2**

ICP SERIAL DILUTION

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Cr (%D = 12), Cu (%D = 14), Pb (%D = 15), Ni (%D = 12),and Zn (%D = 14). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Cr, Cu, Pb, Ni, Zn -> **MB5DL8, MB5DM2, MB5DM6, MB5DM8, MB5DN0, MB5DN2**

PERCENT SOLIDS

The percent solids was less than 50 for all six soil samples in this SDG. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified _-> **MB5DL8, MB5DM2, MB5DM6, MB5DM8, MB5DN0, MB5DN2**

A.2.3.4 Contract-Problem/Non-Compliance: None.

Subject: Inorganic data Validation Completion - Newtown Creek Site - Case # 38236

Attachments: 38236--MB5DM4.pdf; 38236---MB5DM4.xls; 38236--MB5DM4--DA.doc

38236--MB5DM4.pdf (82 KB) 38236---MB5DM4.xls (147 KB) 38236--MB5DM4--DA.doc (58 KB)

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek
Case # 38236 SDG # MB5DM4
Samples- 10 Soil
Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 04/02/09

Data Validation Summary

No result was rejected. Few analyte results were flagged (J) as estimated due to the Matrix Spike and ICP serial dilution analyses being outside the control limits. In addition, all soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5DQ6D), Matrix Spiked Sample (MB5DQ6S) and Post Digestion Spiked Sample (MB5DQ6A). Please do not use these QC samples to make environmental decisions.

If you have any questions, please call me (Hanif) at (732)906-6169.

(See attached file: 38236--MB5DM4.pdf)(See attached file: 38236---MB5DM4.xls)(See attached file: 38236--MB5DM4--DA.doc)

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 10
SDG# MB5DM4	Lab: CHEMTECH	Water: 0
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable valee. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I•S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I•S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with dJ•.

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of ten (10) soil samples collected at the Newtown Creek site between 3/18/09 and 3/20/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5DQ6.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DM4

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 65), Cd (%R = 134), Ag (%R = 71), and Tl (%R = 50). All associated Sb, Ag, and Tl results and all associated positive Cd results have been considered estimated and qualified "J".

"J" -> Sb, Cd, Ag, Tl -> **MB5DM4, MB5DP5, MB5DQ0, MB5DQ2, MB5DQ4, MB5DQ6, MB5DQ5, MB5DR0, MB5DR2, MB5DR6**

ICP SERIAL DILUTION

The TCP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Al (%D = 13) and Ag (%D = 14). All associated sample results greater than MDL have been considered estimated and flagged "J". The Ag results have been previously qualified.

"J" -> Al -> **MB5DM4, MB5DP5, MB5DQ0, MB5DQ2, MB5DQ4, MB5DQ5, MB5DQ5, MB5DR0, MB5DR2, MB5DR5**

PERCENT SOLIDS

The percent solids was less than 50 for nine samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DM4, MB5DQ0, MB5DQ2, MB5DQ4, MB5DQ5, MB5DQ5, MB5DR0, MB5DR2, MB5DR5**

A.2.3.4 Contract-Problem/Non-Compliance: None.

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DP8 are attached in the Excel format, a PDF of form Is, as well as the data assessment. The hard copy (Form Is) will be sent to the RPM/OSC for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (Weston).

Contact me (Russ) if you have any questions or require information.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG #: BSDPS
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: April / 02 /2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DPS

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to Identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

VLB11-The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **Acetone** B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **Methylene chloride** B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ8

VLB12-The following volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **1,4-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **1,2,4-Trichlorobenzene** B5DP8, B5DQ4, B5DQ6
- **1,3-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **1,2,3-Trichlorobenzene** B5DP8, B5DQ4, B5DQ6
- **1,2-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8

B) **Field or rinse blank contamination:**

VLB47-The following volatile samples have analyte concentrations reported less than the CRQL. The associated Field blank concentration is less than the concentration criteria. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **Toluene**

B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
No additional qualification due to Storage blank contamination.

E) **Tics "R" rejected:**
Substituted Cyclohexene in the following samples: B5DP8, B5DQ0
Substituted Cyclohexanone in the following samples: B5DQ4

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The

continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane, 1,4-Dioxane-d8

-B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8, VBLKM1, VHBLKM1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 60% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must hot vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane, 1, 4-Dioxane-dS:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B5DPS
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: April / 06 / 2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DPS

1. **HOLDING TIME:**

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. **SURROGATES**

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

BDSS14-The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

- 4-Chloroaniline-d4 B5DQ4

-3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

BDSS1420-The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit df the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

- 4-Chloroaniline-d4 B5DQ4DL

-3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

BDSS15-The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- Pyrene-d10 B5DM4, B5DQ6

-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

BDSS1520-The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected

compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DQ2DL, B5DQ4DL, B5DQ8DL

- Pyrene-d10 B5DQ4DL, B5DQ8DL

-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

- 4-Nitrophenol-d4 B5DQ2DL

-2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

BLB14-The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- Bis (2-Ethylhexyl) phthalate B5DP8, B5DQ0

B) Field or rinse blank contamination:

The following semivolatile samples have common contaminant concentrations reported less than the CRQL. The associated Field blank concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-Benzaldehyde B5DM4

-Phenol B5DP8, BDQ0

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
1,1-Bipheny's in the following samples: B5DM4, B5DQ0, B5DQ4,B5DQ6DL

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of

these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

BC10-The following semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ2DL, B5DQ4, B5DQ4DL, B5DQ6, B5DQ6DL, B5DQ8, B5DQ8DL, SBLK22, SBLK45

- Pentachlorophenol SSTD020NK

-B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ2DL, B5DQ4, B5DQ4DL, B5DQ6, B5DQ6DL, B5DQ8, B5DQ8DL, SBLK22, SBLK45

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial br total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified comppunds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE: No problems.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG #: B8DPS
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) br "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: April / 02 /2009

Peer Reviewer's Signature: _____ Date: ____ / ____ / 2009

Verified By: _____ Date: ____ / ____ / 2009

SDG# B8DP8

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

VLB11-The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **Acetone** B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **Methylene chloride** B5DM4, B5DP8, B5DQ0, B5DQ2, B5DQ8

VLB12-The following volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **1,4-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **1,2,4-Trichlorobehzene** B5DP8, B5DQ4, B5DQ6
- **1,3-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8
- **1,2,3-Trichlorobenzene** B5DP8, B5DQ4, B5DQ6
- **1,2-Dichlorobenzene** B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8

B) **Field or rinse blank contamination:**

VLB47-The following volatile samples have analyte concentrations reported less than the CRQL. The associated Field blank concentration is less than the concentration criteria. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- **Toluene**

B5DP8, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
No additional qualification due to Storage blank contamination.

E) **Tics "R" rejected:**
Substituted Cyclohexene in the following samples: B5DP8, B5DQ0
Substituted Cyclohexanone in the following samples: B5DQ4

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The

continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane, 1,4-Dioxane-dS

-B5DM4, B5DP5, B5DQ0, B5DQ2, B5DQ4, B5DQ6, B5DQ8, VBLKMI, VHBLKMI

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor perfbrmers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% tp +200%) range of the asspciated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane, 1, 4-Dioxane-dS:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS:

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines fbr Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

BDSS14-The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

- 4-Chloroaniline-d4 B5DQ4

-3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

BDSS1420-The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are not qualified.

- 4-Chloroaniline-d4 B5DQ4DL

-3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

BDSS15-The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

- Pyrene-d10 B5DM4, B5DQ6

-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

BDSS1520-The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected

compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DQ2DL, B5DQ4DL, B5DQ8DL

- Pyrene-d10 B5DQ4DL, B5DQ8DL

-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

- 4-Nitrophenol-d4 B5DQ2DL

-2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

BLB14-The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

- Bis (2-Ethylhexyl) phthalate B5DP5, B5DQ0

B) Field or rinse blank contamination:

The following semivolatile samples have common contaminant concentrations reported less than the CRQL. The associated Field blank concentration is less than the CRQL. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

-Benzaldehyde B5DM4

-Phenol B5DP5, BDQ0

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
1,1-Bipheny's in the following samples: B5DM4, B5DQ0, B5DQ4,B5DQ6DL

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Respohse Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of

these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

BC10-The following semivolatile samples are assbciated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Nondetected compounds are qualified UJ.

-B5DM4, B5DP5, B5DQ0, B5DQ2, B5DQ2DL, B5DQ4, B5DQ4DL, B5DQ6, B5DQ6DL, B5DQ8, B5DQ8DL, SBLK22, SBLK45

- Pentachlorophenol SSTD020NK

-B5DM4, B5DP5, B5DQ0, B5DQ2, B5DQ2DL, B5DQ4, B5DQ4DL, B5DQ6, B5DQ6DL, B5DQ8, B5DQ8DL, SBLK22, SBLK45

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial br total rejection of the data for that sample fraction.

No problems found for this qualification.

S. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard cbmpound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE: No problems.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

    B5DQ2DL, B5DQ4DL, B5DQ6DL, B5DQ5DL

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

    B5DQ2DL, B5DQ4DL, B5DQ5DL, B5DQ5DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DATACHEM
SAMPLER: W-SAT

SDG No.: B8DP8
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Amin Date: April / 06 / 2009

Peer Reviewer's Signature: _____ Date: ____/___/2009

Verified By: _____ Date: ____/____/2009

SDG# B8DP8

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken In the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. **SURROGATES**

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

ADSS3-The following undiluted aroclor samples have surrogate percent recoveries less than 10%. Detected compounds are qualified J. Nondetected compounds are qualified R.

- **Tetrachloro-m-xylene** B5DQ4, B5DQ6

-Aroclor-1016, Aroclor-1221, Aroclor-1232, Aroclor-1242, Aroclor-1245, Aroclor-1254, Aroclor-1260, Aroclor-1262, Aroclor-1265

3. **MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:**

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

AMS1-The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds are qualified J. Nondetected compounds are not qualified.

- **Aroclor**-1016 B5DQ0, B5DQ0**MS**, B5DQ0**MSD**

AMS4-The following Aroclor matrix/matrix spike duplicate samples have percent recoveries that are greater than the upper acceptance limit Detected compounds are qualified J. Nondetected compounds are not qualified.

- **Aroclor**-1016 B5DQ0, B5DQ0**MS**, B5DQ0**MSD**

4. **Laboratory Control Samples (LCS):**

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been Introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument Is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

QUALIFIED J:

ADL312-The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

- Aroclor-1016 B5DQ0MSD

QUALIFIED JN:

ADL322-The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified NJ.

- Aroclor-1254 B5DQ0, B5DQ0DL, B5DQ2, B5DQ2DL, B5DQ4, B5DQ4DL, B5DQ6, B5DQ5DL, B5DQ5.
- Aroclor-1242 B5DQ5

QUALIFIED R:

ADL342-The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified R.

- Aroclor-1254 B5DM4,

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**
Sample # B5DQ4: Using professional judgement, Aroclor -1254 has been qualified JN instead of R for the Aroclor Identification criteria.

11. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DQ4, B5DQ5, B5DQ0DL, B5DQ2DL

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DR0 (3 soil samples for VOA, BNA, PCB) are attached in the Excel format, PDF of all Form 1s, as well as the data assessment.

The attached electronic files are being forward to the site contractor (Weston Solutions).

Contact me (Hanif) if you have any questions or require information.

(See attached file: 38236--B5DR0--VOA--DA.doc)(See attached file: 38236--B5DR0.pdf)(See attached file: 38236--B5DR0---BNA--DA.doc)(See attached file: 38236--B5DR0---PCB--DA.doc)(See attached file: 38236---B5DR0--VOA--BNA---ARO.xls)

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DR0
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOR for Statement of Work SOM01.2 for evaluating organic data has been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J Shellev Date: April/02/2009

Peer Reviewer's Signature: _____ Date: ____/ /2009

Verified By: _____ Date: ____/ /2009

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Acetone B5DR0, B5DR2, B5DR6
Methylene chloride B5DR0, B5DR2, B5DR6
The following volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to

the CRQL.
1,4-Dichlorobenzene B5DR0, B5DR2, B5DR6
1,2,4-Trichlorobenzene B5DR0, B5DR2, B5DR6
1,3-Dichlorobenzene B5DR0, B5DR2, B5DR6
1,2,3-Trichlorobenzene B5DR2, B5DR6
1,2-Dichlorobenzene B5DR0, B5DR2, B5DR6

B) **Field or rinse blank contamination:**

The following volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DR0, B5DR2, B5DR6

C) **Trip blank contamination for VOA aqueous samples:**
Not applicable.

D) **Storage Blank associated with VOA samples only:**
No additional qualification due to storage blank contamination.

E) **Tics "R" rejected:**
None.

5. **MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. **CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) **Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected

compounds are qualified R.

1,4-Dioxane B5DR0, B5DR2, B5DR6, VBLKM1, VHBLKM1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification.

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing

response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

10. **FIELD DOCUMENTATION:** No problems.

11. **OTHER PROBLEMS:** None.

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: ALS DataChem Laboratories
SAMPLER: W-SAT

SDG No.: B5DR0
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J Shelley Date: April/02/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DR0

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analyticai technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified.
Bis (2-Ethylhexyl) phthalate B5DR2

B) Field or rinse blank contamination:
The following semivolatile samples have analyte concentrations reported less than CRQL. The associated rinse blank concentration is less than CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.
Benzaldehyde B5DR2, B5DR6
Phenol B5DR0, B5DR0DL, B5DR2, B5DR6

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
1,1'-Biphenyles are qualified rejected R in the following samples.
B5DR0DL, B5DR6

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Bis (2-Chloroethyl) ether
B5DR0, B5DR0DL, B5DR2, B5DR6, SBLK00

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

9. CONTRACT PROBLEMS NON-COMPLIANCE:
Bis (2-Chloroethyl) ether
Percent relative standard deviation (%RSD) fell outside Contractual Criteria in the initial Calibration.

10. FIELD DOCUMENTATION: No problems.

11. OTHER PROBLEMS: None.

12. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DR0DL

SDG# B5DR0

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1260 B5DR6MS, B5DR6MSD, B5DR6, B5DR6DL
Aroclor-1016 B5DR6MS, B5DR6MSD, B5DR6, B5DR6DL

The following Aroclor matrix/matrix spike duplicate samples have percent recoveries that are greater than the upper acceptance limit Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1260 B5DR6MS, B5DR6MSD, B5DR6, B5DR6DL
Aroclor-1016 B5DR6MS, B5DR6MSD, B5DR6, B5DR6DL

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification.

B) Field or rinse blank contamination:
No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

The percent difference between analyte results for the following Aroclor samples is greater than 25%. The following action is taken based on percent difference. Percent difference ranging from 26% - 50%, hits are qualified J, 51%-100%, hits are qualified JN, >100%, hits are qualified R. Aroclor value

< CRQL and % D > 50%, hits are raised to the CRQL and qualified U.

QUALIFIED J:
Aroclor-1254 B5DR2
Aroclor-1016 B5DR6MS
Aroclor-1242 B5DR2

QUALIFIED JN:
Aroclor-1254 B5DR0, B5DR6, B5DR6DL

8. CONTRACT PROBLEMS NON-COMPLIANCE: None.

9. FIELD DOCUMENTATION: No problems.

10. OTHER PROBLEMS:
Sample B5DR6 was used as a MS/MSD samples. Aroclor-1242 and Aroclor-1254 were reported non-detected for B5DR6MS and B5DR6MSD. However, Aroclor-1242 and Aroclor-1254 were reported greater than CRQL, 800 ug/kg and 950 ug/kg, respectively for original sample B5DR6. Additionally, sample B5DR6 was analyzed at a 1:5 dilution for Aroclor-1254.

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
B5DR6DL

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek
Case # 38236 SDG # MB5DS0
Samples- 11 Soil & 1 Aqueous Field Blank Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 04/08/09

Data Validation Summary

No result was rejected. All antimony and silver results were flagged (J) as estimated due to the Matrix Spike analysis being outside the control limits. In addition, ten soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5DT4D), Matrix Spiked Sample (MB5DT4S) and Post Digestion Spiked Sample (MB5DT4A). Please do not use these QC samples to make environmental decisions.

If you have any questions, please call me (Hanif) at (732)906-6169.

(See attached file: 38236--MB5DS0--DA.doc)(See attached file: 38236--MB5DS0.pdf)(See attached file: 38236--MB5DS0.xls)

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 11
SDG# MB5DS0	Lab: CHEMTECH	Water: 1
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I*S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I*S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with "U".

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of one (1) aqueous and eleven (11) soil samples collected at the Newtown Creek site between 3/25/09 and 3/26/009 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Sample MB5E50 was the filed duplicate of sample MB5DS2. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5DT4. The only aqueous sample in this case was identified as field blank. Consequently, no matrix spike, laboratory duplicate or ICP serial dilution analyses were performed for the aqueous matrix.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DS0

ICB/CCB

The Calibration Blanks values were ≥MDL but ≤CRQL for Al, Ca, Fe, Mg, Mn and Se. (Only analytes that required qualifications were mentioned.) The associated positive results ≤CRQL were raised to the CRQL and qualified "U".

"U" -> Al, Ca, Fe, Mg, Mn -> MB5E96

Se -> MB5DS0, MB5DS2, MB5E50

PREPARATION BLANK

The Preparation Blank values were ≥MDL but ≤CRQL for Al. (Only analytes that required qualifications were mentioned.) The associated positive results ≤CRQL were raised to the CRQL and qualified "U".

"U" -> Al* -> MB5E96

MATRIX SPIKE

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 69), and Ag (%R = 54). All associated results have been considered estimated and qualified "J".

"J" -> Sb, Ag -> MB5DS0, MB5DS2, MB8DS8, MB5DT4, MB5DT6, MB5DT8, MB5DW0,

MB5DW4, MB5DW8, MB5DX2, MB5E50

PERCENT SOLIDS

The percent solids was less than 50 for 10 soil samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified _-> MB5DS0, MB5DS2, MBSDSS, MB5DT4, MB5DT6, MB5DT8, MB5DW0, MB5DW4, MBSDWS, MBSDX2, MBSES0

* already qualified

A.2.3.4 Contract-Problem/Non-Compliance: None.

Subject: Inorganic Data Validation Completion - Newtown Greek Site - Case # 38236

Attachments: 38236--MB5DN4--DA.doc; 38236--MB5DN4.pdf; 38236--MB5DN4.xls

38236--MB5DN4--DA.doc (60 KB) 38236--MB5DN4.pdf (86 KB) 38236--MB5DN4.xls (170 KB)

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek
Case # 38236 SDG # MB5DN4
Samples- 11 Soil & 1 Aqueous Field Blank Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 03/30/09

Data Validation Summary

No result was rejected. Few analyte results were flagged (J) as estimated due to the Matrix Spike and ICP serial dilution analyses being outside the control limits. In addition, all soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5DN4D), Matrix Spiked Sample (MB5DN4S) and Post Digestion Spiked Sample (MB5DN$A). Please do not use these QC samples to make environmental decisions. The field blank is marked as such on the XLS spreadsheet.

If you have any questions, please call me (Hanif) at (732)906-6169.

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 11	
SDG# MB5DN4	Lab: CHEMTECH	Water: 1	
Sampling Team: W-SAT	Reviewer: C. STANCA	Other: 0	

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I•S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I•S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with •U•.

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of one (1) aqueous and eleven (11) soil samples collected at the Newtown Creek site between 3/16/09 and 3/17/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5DN4. The only aqueous sample in this case was identified as field blank. Consequently, no matrix spike, laboratory duplicate or ICP serial dilution analyses were performed for the aqueous matrix.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 CSF Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DN4

ICB/CCB

The Calibration Blanks values were ≥MDL but ≤CRQL for Al and Tl. (Only analytes that required qualifications were mentioned.) The following associated positive results ≤CRQL were raised to the CRQL and qualified "U".

"U" -> Al, Tl -> MB5E94

PREPARATION BLANK (WATER)

The Preparation Blank values were ≥MDL but ≤CRQL for Al and Pb. (Only analytes that required qualifications were mentioned.) The associated positive results ≤CRQL were raised to the CRQL and qualified "U".

"U" -> Al*, Pb -> MB5E94

MATRIX SPIKE (SOIL)

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Sb (%R = 66) and Tl (%R = 53). All associated results have been considered estimated and qualified "J".

"J" -> Sb, Tl -> MB5DN4, MB5DN6, MB5DN8, MB5DP0, MB5DP2, MB5DP4, MB5DP6,

MB5E12, MB5E14, MB5E16, MB5E48

ICP SERIAL DILUTION (SOIL)

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for Cd (%D = 11) and Ag (%D = 14). All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> Cd, Ag -> **MB5DN4, MB5DN6, MB5DN5, MB5DP0, MB5DP2, MB5DP4, MB5DP6, MB5E12, MB5E14, MB5E16, MB5E48**

PERCENT SOLIDS

The percent solids was less than 50 for ten samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DN4, MB5DN6, MB5DN5, MB5DP0, MB5DP4, MB5DP6, MB5E12, MB5E14, MB5E16, MB5E48**

* already qualified

A.2.3.4 Contract-Problem/Non-Compliance: None.

Subject: Inorganic Data Validation Completion - Newtown Creek Site - Case # 38236

Attachments: 38236---MB5DW2.xls; 38236--MB5DW2--DA.doc; 38236--MB5DW2.pdf

38236---MB5DW2.xls (217 KB) 38236--MB5DW2--DA.doc (60 KB) 38236--MB5DW2.pdf (96 KB)

Please be advised that the Hazardous Waste Support Branch has completed its review of the following inorganic data case for the site indicated.

Site- Newtown Creek
Case # 38236 SDG # MB5DW2
Samples- 16 Soil & 1 Aqueous Field Blank Analysis- TAL Metals + Hg Lab Code- CHEM

Sampling Team- W-SAT
Completion Date- 04/08/09

Data Validation Summary

No result was rejected. All antimony and silver results were flagged (J) as estimated due to the Matrix Spike analysis being outside the control limits. In addition, ten soil samples were flagged as estimated due to the percent solids being less than 50%. The flagged results are usable to make environmental decisions.

Attached are pdf of all Form I's, xls spreadsheet and data review narrative for the SDG in this case. Also included are the results for Lab Duplicate (MB5DW6D) and Matrix Spiked Sample (MB5DW2S). Please do not use these QC samples to make environmental decisions. The field blank is marked as such on the xls spreadsheet.

If you have any questions, please call me (Hanif) at (732)906-6169.

(See attached file: 38236---MB5DW2.xls)(See attached file: 38236--MB5DW2--DA.doc)(See attached file: 38236--MB5DW2.pdf)

Inorganic Data Review Narrative

Case# 38236	Site: NEWTOWN CREEK	Soil: 16
SDG# MB5DW2	Lab: CHEMTECH	Water: 1
Sampling Team: W-RST	Reviewer: C. STANCA	Other: 0

A.2.1 Data Validation Flags:

The following flags may have been applied in red by the data validator and must be considered by the data user.

J - This flag indicates the result qualified as estimated

R and Red-Line - A red-line drawn through a sample result indicates unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

U - This data validation qualifier is applied to sample results ≥ MDL when associated blank is contaminated

Fully Usable Data - The results that do not carry "J" or "red-line" are fully usable.

A.2.2 Laboratory Qualifiers:

The CLP laboratory applies a contractual qualifier on all Form I•S and the QC Form when a QC analysis is outside the control limits. These qualifiers are not applied on the Lotus or XLS spreadsheets. These qualifiers and their meanings are as follows:

N: This qualifier indicates the lack of accuracy in the reported result, and is applied when matrix spiked sample recovery is outside the control limits.

E: This qualifier indicates the presence of interference, and is applied when the ICP serial dilution is outside the control limits.

*: This qualifier indicates the lack of precision, and is applied on Form I•S and Form VI when the Lab Duplicate analysis is outside the control limits.

U: This is a concentration qualifier that laboratory applies to a non-detected result which is essentially less than the Method Detection Limit (MDL). A non-detected result of an analyte is indicated by the Contract Required Quantitation Limit (CRQL) of that analyte suffixed with "U".

J: This is also a concentration qualifier that laboratory applies to a positive result below the CRQL.

NOTE: The laboratory qualifiers are crossed out and replaced with the appropriate data validation qualifiers (J, R or U) by the data validator.

A.2.3.1 Data Case Description:

This case consists of one (1) aqueous and sixteen (16) soil samples collected at the Newtown Creek site between 3/31/09 and 4/01/09 for TAL Metals and Mercury analysis according to the USEPA CLP SOW No. ILM05.4. Matrix spike, laboratory duplicate and serial dilution analyses were performed on sample MB5DW6. The only aqueous samples in this case were identified as field blank. Consequently, no matrix spike, laboratory duplicate or ICP serial dilution analyses were performed for the aqueous matrix.

As per EPA Technical Direction Form (TDF) only the following criteria were reviewed by the data validator: Preservation, Holding Time, CRQL Standard, Matrix Spike (soil matrix), ICS, Laboratory Duplicate, Field Duplicate, ICP Serial Dilution (non-detects). The qualifiers applied on Form Is and CADRE EXCEL spreadsheets are based on ESAT data review of the above mentioned criteria. For all other criteria see the attached CADRE Reports.

A.2.3.2 C5F Audit: No problems.

A.2.3.3 Technical Review:

SDG MB5DW2

ICB/CCB

The Calibration Blanks values were ≥MDL but ≤CRQL for Al, Be, Ca, Mg, Mn, K and Tl. (Only analytes that required qualifications were mentioned.) The following associated positive results ≤CRQL were raised to the CRQL and qualified ■U•.

"U" -> Be -> MB5DW2, MB5DW5, MB5DX0, MB5DX4, MB5DX6, MB5DX5, MB5DY0, MB5DY2, MB5DY4, MB5DZ0, MB5DZ4, MB5DZ5, MB5E00, MB5E02, MB5E06, MB5E52

Tl -> MB5DZ5

Al, Ca, Mg, Mn, K -> MB5E95

PREPARATION BLANK (WATER)

The Preparation Blank values were ≥MDL but ≤CRQL for Al. (Only analytes that required qualifications were mentioned.) The associated positive results ≤CRQL were raised to the CRQL and qualified ■U•.

"U" -> Al* -> MB5E98

MATRIX SPIKE (SOIL)

The matrix spike recovery was outside the control limits of 75 - 125% when sample concentration was less than 4 X spike concentration for Ag (%R = 67).

All associated results have been considered estimated and qualified "J".

"J" -> Ag -> **MB5DW2, MB5DW5, MB5DX0, MB5DX4, MB5DX5, MB5DX5, MB5DY0, MB5DY2, MB5DY4, MB5DZ0, MB5DZ4, MB5DZ5, MB5E00, MB5E02, MB5E05, MB5E52**

ICP SERIAL DILUTION

The ICP serial dilution analysis yielded percent differences greater than 10 but less than 100 when the initial concentration was equal to or greater than 50 X MDL for eight analytes. All associated sample results greater than MDL have been considered estimated and flagged "J".

"J" -> As, Cd, Cr, Cu, Fe, Pb, Ni, Zn -> **MB5DW2, MB5DW5, MB5DX0, MB5DX4, MB5DX5, MB5DX5, MB5DY0, MB5DY2, MB5DY4, MB5DZ0, MB5DZ4, MB5DZ5, MB5E00, MB5E02, MB5E05, MB5E52**

PERCENT SOLIDS

The percent solids was less than 50 for all soil samples. All sample results not previously qualified have been considered estimated and flagged "J".

"J" -> All results not previously qualified -> **MB5DW2, MB5DW5, MB5DX0, MB5DX4, MB5DX5, MB5DX5, MB5DY0, MB5DY2, MB5DY4, MB5DZ0, MB5DZ4, MB5DZ5, MB5E00, MB5E02, MB5E05, MB5E52**

* already qualified

A.2.3.4 Contract-Problem/Non-Compliance: None.

Validated data for the Newtown Creek site under the CLP Case # 38236, SDG # B5DS0 are attached in the Excel format, a PDF of form Is, as well as the data assessment. The hard copy (Form Is) will be sent to the RPM/OSC for the site, and the RPM will forward the data as necessary.

The attached electronic files are being forward to the site contractor (Weston).

Contact me (Russ) if you have any questions or require information.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DS0
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33/VOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration Is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: April/9/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DS0

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

1,4-Dichlorobenzene B5DW4, B5DW8, B5DX2

1,2,4-Trichlorobenzene B5DS2, B5DT8, B5DW0, B5DW4, B5E50

1,3-Dichlorobenzene B5DW4, B5DW8, B5DX2

1,2,3-Trichlorobenzene B5DW4

1,2-Dichlorobenzene B5DW4, B5DW8, B5DX2

B) Field or rinse blank contamination:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DT8, B5DW0, B5DW4, B5DW8, B5DX2, B5E50

C) Trip blank contamination for VOA aqueous samples:

Not Applicable.

D) Storage Blank associated with VOA samples only:

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated storage blank common contaminant concentration is less than 2x the concentration criteria Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Acetone B5DS8, B5DT4, B5DT6, B5DT8, B5DW0, B5DW4, B5DW5, B5DX2, B5E50

The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the concentration criteria. Detected compounds are qualified U. Nondetected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Chloroform B5DS8, B5DT4, B5DT6, B5DT8, B5DW4

E) Tics "R" rejected:

Cyclohexanone was found & was rejected "R" in the following samples B5DS0, B5E50

Cyclohexene was found & was rejected "R" in the following samples B5DS8

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification

6. CALIBRATION:

Satisfactory Instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified "R"

1, 4-Dioxane and 1, 4-Dioxane-d8 B5DS0, B5DS2, B5DS8, B5DT4, B5DT6, B5DT8, B5DW0, B5DW4, B5DW8, B5DX2, B5E50, B5E96, VBLKM1, VBLKM2, VBLKW1, VHBLKM1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < S0% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

None

13. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DS0
SITE: Newtown Creek
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: April/10/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DS0

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following semi-volatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

2-Chlorophenol-d4 B5E95

2-Chlorophenol

Bis (2-Chloroethyl) ether-d8 B5E96

2,2'-Oxybis(1-Chloropropane), Bis(2-Chloroethoxy)methane, Bis(2-Chloroethyl)ether

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A)

Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

The following semi-volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Di-n-butylphthalate B5DS0, B5DW0, B5DW8

Phenol B5DS0, B5DT4, B5DT6, B5DW0, B5DW4

Indeno(1,2,3-cd) pyrene B5DS0, B5DS2, B5DT4, B5DT6, B5DT6DL, B5DT8, B5DW0, B5DW0DL, B5DW4, B5DW8, B5DX2, B5E50, B5E50DL.

Dibenzo(a, h) anthracene B5DS0, B5DS2, B5DT4, B5DT6, B5DT6DL, B5DT8, B5DW0, B5DW0DL, B5DW4, B5DW8, B5DX2, B5E50, B5E50DL, B5DS8

Benzo(g,h,i) perylene B5DS0, B5DS2, B5DT4, B5DT6, B5DT6DL, B5DT8, B5DW0, B5DW0DL, B5DW4, B5DW8, B5DX2, B5E50, B5E50DL.

The following semi-volatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Bis (2-Ethylhexyl) phthalate B5DS8, B5DW4

C) Trip blank contamination for VOA aqueous samples:

Not Applicable

D) Storage Blank associated with VOA samples only:

Not Applicable

E) Tics "R" rejected:

1,1-Biphenyl was found & was rejected "R" in the following samples B5DS8, B5DT8, B5DW0, B5DW5, B5DX2, B5E50DL.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are hot sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semi-volatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Bis (2-Chloroethyl) B5DS0, B5DS2, B5DS8, B5DT4, B5DT6, B5DT6DL, B5DT8, B5DW0, B5DW0DL, B5DW4, B5DW5, B5DX2, B5E50, B5E50DL, B5E96, SBLK05, SBLK37, SBLK42, SBLK56

The following semi-volatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Pyrene B5DS0, B5DS5, B5DT4, B5DT6, B5DT5, B5DW0, B5E50, SBLK56

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Detected compounds are qualified J. Non-detected compounds are not qualified.

Decachlorobiphenyl B5DS8

Aroclor-1016, Aroclor-1221, Aroclor-1232, Aroclor-1242, Aroclor-1248, Aroclor-1254, Aroclor-1260, Aroclor-1262, Aroclor-1268

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1016 B5DW4MS, B5DW4MSD, B5DW4

The following Aroclor matrix/matrix spike duplicate samples have percent recoveries that are greater than the upper acceptance limit. Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1016 B5DW4MS, B8DW4MSD, B5DW4

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, I.e., method, field, or rinse blanks are prepared to Identify any contamination, which may have been Introduced Into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the Instrument Is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument Is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that Is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml In the final sample extract.

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

Aroclor-1260 ALCSS9

Aroclor-12S4 B5DS0, B5DS2, B5DT4, B5E50, B5E50DL

Aroclor-1016 ALCSS9, B5DW4MS, B5DW4MSD

Aroclor-1242 B5DS2DL, B5DT8, B5DW5DL, B5E50DL

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified NJ.

Aroclor-1254 B5DS2DL, B5DT6, B5DT8, B5DW0, B5DW4, B5DW5, B5DX2

Aroclor-1242 B5DX2, B5DX2DL

The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Aroclor-1242 B5E96

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified R.

Aroclor-1254 B5DT8DL

8. CONTRACT PROBLEMS NON-COMPLIANCE: None.

9. FIELD DOCUMENTATION: No problems.

10. OTHER PROBLEMS:

None

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DW2
SITE: Newtown Creek
ANALYSIS: VOA

DATA ASSESSMENT

The current SOP HW-33A/OA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data has been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: April/19/2009

Peer Reviewer's Signature: _____ Date: ____/____/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DW2

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. DMC's

All samples are spiked with surrogate compounds (DMC's) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown beiow.

No problems found for this qualification

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated rinse blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Toluene B5DW2, B5DW6, B5DX0, B5DX4DL, B5DX6, B5DX8, B5DY0, B5DY2, B5DY4, B5DZ0, B5DZ4, B5E00, B5E02, B5E06, B5E52

C) Trip blank contamination for VOA aqueous samples:

Not Applicable.

D) Storage Blank associated with VOA samples only:

The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

m,p-Xylene B5DX5, B5E06

E) Tics "R" rejected:

Cyclohexanone was found & was rejected "R" in the following samples B5DX5

Cyclohexene was found & was rejected "R" in the following samples B5DX6, B5DZ0

Cyclohexanol was found & was rejected "R" in the following samples B5E00

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with an initial/ continuing/ closing calibration with relative response factors (RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified "R"

1, 4-Dioxane and 1, 4-Dioxane-d8 B5DW2, B5DW6, B5DX0, B5DX4, B5DX4DL, B5DX6, B5DX5, B5DY0, B5DY2, B5DY4, B5DZ0, B5DZ4, B5DZ5, B5E00, B5E02, B5E06, B5E52, B5E98, VBLKM1, VBLKW1, VHBLKM1, VHBLKW1

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

No problems found for this qualification

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

1, 4-Dioxane:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

1, 4-Dioxane-d8:
Average response factor (RRF) is below the Contractual Criteria in the initial Calibration. Continuing Response factor (RRF50.0) is below the contractual criteria in all the opening and closing CCV calibrations.

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

None

13. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results,

the following Form 1(s) are identified NOT to be used.

B5DX4DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 38236
LABORATORY: DataChem
SAMPLER: W-SAT

SDG No.: B5DW2
SITE: Newtown Creek
ANALYSIS: PCB

DATA ASSESSMENT

The current SOP HW-37 (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N"(presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu Date: April/19/2009

Peer Reviewer's Signature: _____ Date: ____/__/2009

Verified By: _____ Date: ____/____/2009

SDG# B5DW2

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

The following Aroclor matrix/matrix spike duplicate samples have percent recoveries that are greater than the upper acceptance limit Detected compounds are qualified J. Non-detected compounds are not qualified.

Aroclor-1260 B5DW6MS, B5DW6MSD, B5DW6

Aroclor-1016 B5DW6MS, B5DW6MSD, B5DW6

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure

cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% fpr all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problems found for this qualification.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified J.

Aroclor-1260 ALCSS1

Aroclor-1254 B5DY4

Aroclor-1016 B5DW6MSD

Aroclor-1242 B5DY0, B5DY0DL

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified NJ.

Aroclor-1254 B5DW2, B5DX0, B5DX4, B5DX6, B5DX5, B5DY0, B5DY0DL, B5DZ0, B5DZ0DL, B5DZ4, B5DZ4DL, B5DZ5DL, B5E02, B5E02DL, B5E06, B5E06DL

Aroclor-1242 B5DX4

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified R.

Aroclor-1254 B5DW6, B5DZ5, B5E00, B5E52DL, B5E52

Aroclor-1242 B5DX0, B5DX5

8. **CONTRACT PROBLEMS NON-COMPLIANCE:** None.

9. **FIELD DOCUMENTATION:** No problems.

10. **OTHER PROBLEMS:**

None

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
