Subject: Update on TO 35, Field Support List B, TD #4, Electrolux

Kristy,

Just a quick update on TD #4 field work. Our team began field activities yesterday. The plan was to collect groundwater samples from 30, 50, 120, and 150 foot depths at three geoprobe boring locations. However, due to the tightness of the clays present, the Geoprobe hit refusal at around 75-80 feet. The team was only able to get shallow samples (at 30 and 50 feet) at two of the three sample locations yesterday. The third sample location did not yield any groundwater from 55' up. The team returned to the second boring this morning to see if they could advance beyond 80 feet, and were unsuccessful again due to the geology. Kirk Mammoliti let Brian Mitchell know as soon as the issues became apparent yesterday, and has also communicated with him again today.

Thanks,
Kathy
