Subject: RE: LOOP - Hot issues for RA??

Hi LaGayla,

I have not been involved in the most recent issues/actions regarding LOOP over the last few months. (This one has been in-house since Feb 2014.)

Communications re: this permittee/joint permit issuance between EPA R6 and LDEQ was elevated to the Stacey/Scott Guilliams (LDEQ) level many months ago & attorneys are involved also. Isaac is the EPA permit writer and also was in charge of the oversight review in which he identified the lack of whole effluent toxicity (WET) requirements for the brine discharge (Outfall 004, defined as in State waters) and others have been involved on various issues as they arise (some copied here).

As Louisiana coordinator, I provided backup whenever possible. Most recently I put together a rough chronology of past LOOP permits. Also, most of the records that I have (except very recent ones) are loaded in H:\6wq\6WQ-P\Administrative Record (AR) LOOP .

Thanks for the heads up.

K

Subject: LOOP

Morning Kay,

If you have any "Hot Issues" on LOOP for the administrator they are due Thursday. I believe you would give them to Brent.
