Subject: While I am out 7/17-26/2017.....

Hi Mark/(Kilty, Acting)

I plan to return to the office (i.e., NO FLEX) on Thur., 7/27/17 ….(assuming no complications).

Everything I had in progress for issuance to LDEQ, was issued today, Fri., 7/14/17…barely!

No NEW PDPs have been received from LDEQ as of this moment…so I should be able to handle whatever comes in while I am gone when I return.

Here is a link to the LA "Final Letters" which have been saved to the **Branch Reading File in H**: H:\6wq\6WQ-P\Reading Files\Louisiana

Some of the letters that were reassigned to other folks are in H:, but a few have not been added yet.

Attached is a copy of the current status of LA facilities in the **Permit Tracking Database**. Same thing – several facilities still need to be updated if they are past the "due date."

I will tackle getting the needed info if necessary when I return.

If LOOP "flares up" here is a link to the electronic info that I have compiled over ~3 years

H:\6wq\6WQ-PO\Louisiana DRAFT Permit Reviews\LA0049492 LOOP Deepwater Port Complex_LDEQ and EPA copermittees

Also, hard-copy materials are located outside of Isaac's cube/across from Maria.

(Isaac is the EPA "permit writer" in this joint EPA/LDEQ permit and Silvia is the contact for

everything related to biomonitoring/WET at the Brine Outfall 004.

Also, Rich/Taim have pitched in for “modeling/critical dilution” in the past.)

Thanks

K
