Subject: RE: Still Collecting Anacostia Trash Data?
Attachments: Montgomery Parks Anacostia Watershed Volunteer Cleanup Data.xlsx

Hi Jillian,

It's slow around here this week so I added approximate lat/lon for these sites – I basically tried to pick more or less the center of the area that was being covered. It's attached as an excel file. I gave you the data as we record it – reported number of trash bags / recyclables bags, bulk trash in pounds, and number of tires. We use the area standard of 25 pounds per bag when we convert the bags to weight and 22 pounds per tire.

Let me know if you have questions etc.

h

Hi Henry,

Thanks so much for reaching out. We are definitely still interested in seeing any and all trash data for the Anacostia. Breaking it down by subwatershed and per clean-up event would be helpful. Could you also provide the lat/lon or the spatial extent of the clean-up (if available, of course)? The other clean-up data we received also tends to separate trash and recyclables, and in some cases, is further broken out into material categories (i.e. bulk trash, plastic, paper, etc.). Whatever you have would be much appreciated!

Thank you,

Jillian Adair

Subject: Still Collecting Anacostia Trash Data?

Hi Jillian,

Contacting you got buried on my to do list this fall and I'm just now getting back to it and see that you had an Oct 23 deadline so I wanted to ask if you are still interested in getting more Anacostia watershed trash data.

If you are we have pretty good data for our park cleanups starting in Jan 2011. I can break it down by sub-watershed (NW Branch, Sligo Creek, Paint Branch) and we have trash and recyclables (bottles and cans) by weight. I can pull it by cleanup event or in other chunks if that's more useful; and export it to excel or csv to send to you.

Let me know if that would be useful and we'll make it happen.

Thanks!
henry
