NEIGHBORHOOD NOTICE

Intersection of Lowerline Street and Coolidge Court
Friday, December 14, 2018

In December 2018, the City of New Orleans, in conjunction with the Louisiana Department of Environmental Quality (LDEQ) and its maintenance contractor engaged Baton Rouge-based ARS Aleut Remediation (AAR) to safely remove and dispose of a small amount of hazardous material located beneath the surface of the Lowerline Street and Coolidge Court intersection. While the origin of the material is unknown, it is most likely from some sort of device that would have been used during prior construction activities for inspection purposes.

The removal and disposal plan ensures the safety of residents, workers and the environment during and following the removal. All excavated material and soil will be placed in drums for safe removal from the area. Representatives from LDEQ will be on hand to make sure that any possible exposure is below the established limits.

Traffic flow will be restricted by barricades and plastic sheeting may be used to protect the ground around the excavation. Crew members may wear Personal Protective Equipment (PPE) including disposable coveralls and gloves.

Weather permitting, work will begin on Monday, December 17 and the entire process including excavation removal and repaving, will take approximately three to five days to complete.

Questions may be directed to 504.658.ROAD (7623) or roadwork@nola.gov.

Thank you for your patience.
