Jack Fitz PowerPoint Bullets for 6/17/2010
Operational Period: 6/16/2010 Sampling Period

- This sampling report presents data collected from the Jack Fitz for the period of 6/14/2010. The sampling strategy for the day was to investigate waters 2km north of the well head. They took samples at Station 4 (28 45.4376N, 88 21.9150W) at depths of 250 ft, 3175 ft, and 3472 ft.

- All depths were sampled by NOAA and ENTRIX (ENTRIX took samples for TSS, HC, and dispersant at each depth; NOAA took samples for dissolved, particulate, and VOA). ENTRIX collected one 40 L sample at surface depth for toxicity analysis.
