Laboratory Report

Resource Laboratories, LLC
124 Heritage Avenue #10 Portsmouth, NH 03801

John Cressey
Summit Environmental Consultants
434 Cony Rd
Augusta, ME 04330

PO Number: 16861
Job ID: 19894
Date Received: 9/1/10

Project: American Tissue 16861

Attached please find results for the analysis of the samples received on the date referenced above.

Unless otherwise noted in the attached report, the analyses performed met the requirements of Resource Laboratories, LLC Quality Assurance Plan. The Standard Operating Procedures (SOP) are based upon USEPA SW-846, USEPA Methods for Chemical Analysis of Water and Wastewater, Standard Methods for the Examination of Water and Wastewater and other recognized methodologies. The results contained in this report pertain only to the samples as indicated on the chain of custody.

Resource Laboratories, LLC maintains certification with the agencies listed below.

We appreciate the opportunity to provide laboratory services. If you have any questions regarding the enclosed report, please contact the laboratory and we will be glad to assist you.

Sincerely,
Resource Laboratories, LLC

(for)

Sue Sylvester
Principal, General Manager

RESOURCE LABORATORIES, LLC

Case Narrative
Lab # 19894

Sample Receiving and Chain of Custody Discrepancies

Samples were received in acceptable condition, at 3 degrees C, on ice, and in accordance with sample handling, preservation and integrity guidelines.

Calibration

No exceptions noted.

Method Blank

No exceptions noted.

Surrogate Recoveries

VOC: The sample 19894-008 showed low recovery for the surrogate dibromofluoromethane. The sample was re-analyzed and the results were similar. Matrix interference suspected.
EPH: Surrogates in the samples 19894-001 and -003 showed recovery outside the acceptance limits as a result of co-eluting hydrocarbons. The chromatograms are included in the report.

Laboratory Control Sample Results

VOC: The MLCS/D3562 did not meet the acceptance criteria for trichloroethene. This compound showed high recovery. There is no impact to the data as this analyte was not detected in the associated samples. The MLCS/D3562 did not meet the acceptance criteria for chloromethane, bromomethane, 2,2-dichloropropane and 1,1,2,2-tetrachloroethane. These compounds are known to be problematic in the method. Since <10% of the compounds were outside of the acceptance criteria, reanalysis is not required.

Matrix Spike/Matrix Spike Duplicate/Duplicate Results

PAH: The matrix spike for 19894-034 did not meet the acceptance criteria for benzo(g,h,i)perylene. The recovery for this compound was acceptable in the laboratory control sample. Matrix interference suspected.

Other

EPH: The fractionation check sample (LCS) for the batch of silica gel in use for these samples met the method acceptance criteria.
PAH: Due to internal standard suppression caused by matrix interference, the target analysis required a dilution for the analysis of 19894-008, -016, -026.
Reporting Limits: Dilutions performed during the analysis are noted on the result pages.

No other exceptions noted.
