John Notar - NPS modeler 7/17/13

Call w/ Parks Service re: Rosemont

- Park Service has been working closely w/ FS
- DEIS indicated N deposition > 6 times above threshold for Saguaro NP

[redacted]

- MMe would contribute to N deposition in a significant way
- MMe will cause visibility impairment in Class I areas Arizona

- [redacted]
- [redacted]

- Mitigation
  - offsets for deposition
    - [redacted]
  - [redacted]

- [redacted]
- [redacted]
  ↳ results for Saguaro E were modeled with Aermod (which is not a good model for the distance and type), Calpuff results may exist but weren't analyzed
- PSD increment values are non-regulatory for minor emitters therefore the PSD increment exceedance cannot be <u>required</u> to be avoided
- look into dry stack tails dust emissions
- Visibility offsets? [redacted]
- TEP and Cal Portland Cement most likely for offsets

- Roxanne [redacted]
  ↳ more stringe
- Penny McDaniel for more details on hybrid haul trucks
