7/10/13 Ben Levesque - CDM re Attleboro

As of July 3 Metalor is off-line. Thinks there is tentative agreement that will keep metalor

within local limits for rest of season
if so, guardedly optimistic extension will not be needed
(extension, if needed, to final compliance date. Existing is probably next May (I need to check))

* Ben Made case that though plant has performed well during brief periods w/o Metabor, they haven't had extended period to test how system operates w/ some tanks, eq. etc off-line, as is likely in real world operations.

Currently not requesting extension. Will check in w/ me in ~ 1 month.

(Metabor is only IU under local limit - only one w/ capacity to discharge this quantity of NH_3 to system)
