Re: Arkwood

The on site water well did not show PCB at detection limit of .01. See Arkwood Sample # 4 on attached sheet.

The sawdust at Arkwood is contaminated - two samples were taken - 30,000 ppm + 23,000 ppm. See Arkwood sample # 1 & 2 on attached sheets. The sawdust pile is approximately 275' x 150' x 4' (feet) i.e. 6,111 cu. yds.
