Water and Oil Mix Recovered from Six Separator

The volumes shown below were not released into the lake

Amended March 30, 2014

Please note correction to typographical error below in bold

- In the 24 hour period ending midnight March 28, a total of 524 barrels of water and oil mix were recovered from six separator. Current content is almost entirely water by volume.
- A total of **3,376** barrels of water and oil mix have been recovered since the onset of the incident 24 March 2014.

Reissued 30 March 2014 13:00

Material Collected from the Lake and Beach

Liquid Collected

- In the 24-hour period ending midnight March 28, zero barrels of water-oil mix were recovered from the lake.
- It is estimated that a total of 12 – 33 barrels of oil have been recovered mixed with an estimated 862 – 883 barrels of water since the onset of the incident 24 March 2014.

One barrel = 42 gallons

Solids Recovered

- In the 24-hour period ending midnight March 28, 0.1 cubic yards of solids were collected at the lakefront.
- It is estimated that a total of 112 cubic yards of solids have been recovered since the onset of the incident 24 March 2014.
- Detailed analytics continue on all solid waste collected at the request of EPA.

Material Recovered from Six Separator

The volumes shown below were not released into the lake

- In the 24 hour period ending midnight March 29, a total of 271 barrels of water and oil mix were recovered from Six Separator. Current content is almost entirely water by volume.
- A total of 3,647 barrels of water and oil mix have been recovered since the onset of the incident 24 March 2014.
- As of 29 March 2014 2200, all water being skimmed from #6 Separator is being collected and stored in three 21,000 gallon Rain-for-Rent frac tanks. This allows for a more direct measurement of the very slight amount of oil being recovered as part of the skimming operations.
