Sounds good. Sorry for any significant delay we caused and thank you for the opportunity for letting us review the SAP.

Have a good weekend.

That helps. I'll talk to the contractor to see if we can do something. We don't have an access agreement for the residential area. That might be an issue.

Kenneth,

See attachment map. Does that work? Yes, I will look at those revised figures.

Jessica,

Could you mark the locations you are describing on a figure and send it to me? I will see if we can add two samples to the SAP. Please do this as soon as possible because we are about to finalize the SAP. Be aware that some of the figures in the CSMTM and SAP are being revised because the contractor marked historic data as exceeds benchmarks when detection limits were higher than benchmark values. This could make you think non-detect values are above benchmark values. We are going to revise this before finalizing these documents.

Kenneth,

We have reviewed the available data collected at the Lane Plating Works, Inc. Superfund site and have concluded that additional sampling is needed to understand the extent of contamination.

Specifically, we recommend that EPA collect a soil sample directly south of the site between the site boundary and Five Mile Creek. We also recommend that EPA collect a soil sample west or northwest of the main building of the site, across Bonnie View Road. We recommend that these soil samples be analyzed for all potential site-related contaminants.

Without this information we cannot evaluate all potential public health risks associated with the site.

Thank you,

Jessica

Lane Plating Team,

We just received the Draft Final version of the SAP and the Final CSMTM for lane Plating. I am hoping to finalize the SAP as soon as possible. Please look at the Track Changes version and me know if you have any significant comments. Doing another revision of the SAP would take at least a week and I am trying to stay on schedule to do field work in May.

Please limit your comments to significant issues that must be addressed in phase one sampling. We will do additional sampling in phase 2 and we can probably fix any data gaps at that time.

I will send the CSMTM in a separate email.

Mr. Shewmake:

Please find attached a copy of the Draft Final Sampling and Analysis Plan. As we discussed, I have also attached a copy of the text in MS Word, which is in track changes format. For ease of finding the Response to Comments included in the SAP, I also included a copy as an attachment.

Please let me know if you have questions and/or comments.

Thank You,
Mark Paddack
