For the story map, Eric suggested we update and use the same language we used for ITC Story Map. I have pasted the text *below*. Eric asked for the EU to work on updating this so we can get the Water section of the story map finished.

"The ITC, TCEQ and EPA continue to conduct surface water sampling during the ITC response. The EPA surface water samples are collected from multiple locations in Buffalo Bayou and the San Jacinto River. The TCEQ water samples are from Channelview and east to the border of Galveston Bay and south of Kemah. After analyses of water sampling, the data will be shared with response partners to determine effective strategies for safe operations at the Port of Houston."

"These surface water samples are analyzed for VOCs, semi-volatile organic compounds (SVOCs), chemical oxygen demand (COD), and oil and grease (O&G). The results from the sampling event were compared to the TCEQ Surface Water Quality Standards (WQS), or to TCEQ Texas Risk Reduction Program surface water protective concentration levels (PCLs), if a WQS was not available for a chemical."

**** External Email ****
TCEQ provided a new table for this incident which was similar but not identical.

Is this the same table that we were comparing to for ITC?

Hi Jon,

Can you provide me a list of the comparison tables that we are using for the water analysis?

Thanks,

David Cook
