Waste Reduction Page

As required in 40 CFR 262.56(a)(5) and 40 CFR 262.87(a)(5), Except for hazardous waste produced by exporters of greater than 100 kg but less than 1000 kg in a calendar month, unless provided pursuant to §262.41 [biennial report], when submitting in even numbered years:

(i) A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated:	Saint-Gobain has a corporate program known as Toriman, which dictates that each site reports all chemicals they use. The program rates each for their hazards, Toxicity, Flammability, Health etc. The site is then required to show what measures are being taken (whenever possible) to eliminate the higher hazard chemicals.

(ii) A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984:	Volume is typically driven by business growth or decline. Aside from those trends we have initiated an SOP that directs operators to only make the required amount of mix reducing left over that could become waste. We also have begun a new coating method in 2011 that only uses mix that is needed versus a reservoir, pump and pan system that requires more than needed.
