SAMPLING DATA

ALBAR Lapeer Co.

SRS: Rubber, plastics, auto
point of release - Barrel
resource affected - soil, Potentially - Surface + Ground waters, air, fauna, flora
Xylene, toluene, methyl, ethyl, Ketone
Aquifer Vulnerability
Direct contact Hazard / Fire Explosion Hazard
Liquids
Priority Pollutant - ~~tuolene~~ toluene

PA: * paint thinner blend of methyl Ethyl Ketone and toluene - is ignitible
* thinners recycled and ~~*~~ still bottoms are waste / D001.
* waste leaked from drums and contaminated 4'x5' area in soils. adjacent to asphalt pad upon which barrels are stored. Vegetation Kill
* Wastes also toxic and persistent
* site less than 1/2 mile from south Branch flint River.
* workers directly exposed to chemicals as they fill drums
* 1 mile = 4431, 2 mile = 8992, 3 mile = 12,281, 4 mile = 46,468

DRAFT: —

FILES: * 30 drums of thinner spent every month
* U159 - 2-Butanone (I,T)
Xylene (I) / Toluene
* Company non-regulated small quantity generator
* in container storage area wastes have leaked from drums + have tainted soils immediately adjacent to your asphalt pad.
* facility managed improperly with regard to human + environmental health safety
* paint thinner used is a blend of M.E.K. + Toluol and is ignitable once spent. Thinner recycled and still bottoms manifested as D001 waste (ignitable)
* holding pad not properly diked
* lab samples by albar indicated non-detectable levels of M.E.K. (Not satisfied with these results DNR conduct own tests)
* population 1 mile = 4431
2 = 8992
3 = 12,281
4 = 46,468

Maps: * S. Branch Flint River Runs about 2/10 of a mile to the east
* 2 schools within 1 mile radius of site
* 3/10 of mile to the east is a small marshy area and ≈ 1/2 mile to the South.
* site located in town
* Elevation ≈ 810

Remarks: ALBAR PAINTS AUTOMOTIVE PLASTIC PARTS FOR THE AUTOMOTIVE INDUSTRY. PAINT THINNER USED IS A BLEND OF MEK and TOLUOL AND IS IGNITABLE. SPENT THINNERS ARE TAKEN TO A FACILITY OWNED BY THE SAME PEOPLE CALLED CAPEER PAINT MANUFACTURING WHICH IS LOCATED ADJACENT TO THIS FACILITY. THE THINNERS ARE RECYCLE THROUGH A STILL, THINNERS ARE REUSED AND STILL BOTTOMS ARE MANIFESTED AS A D001 WASTE.

APPROXIMATELY 30 DRUMS OF THINNER ARE SPENT EVERY MONTH. THE THINNER IS USED IN CLEANING THE MASKS IN THEIR PAINTING OPERATIONS.

INSPECTION FORM B

Section A: Scope of inspection

Standards for generators of HAZARDOUS WASTE subject to 40 CFR 262.10

Section B: MANIFEST REQUIREMENTS (Part 262, Subpart B)

	Yes	No	NI*	Remarks
(1) Does the generator have copies of the manifest available for review? 262.40	✓			
(2) Examine manifests for shipments in past 6 months. Indicate approximate number of manifested shipments during that period. 5				
(3) Do the manifest forms examined contain the following information? (If possible, make copies of, or record information from, manifests that do not contain the critical elements) 262.21				
a. Manifest document number?	✓			
b. Name, mailing address, telephone number, and EPA ID number of generator?	✓			
c. Name and EPA ID number of transporter(s)?	✓			
d. Name, Address, and EPA ID Number of designated permitted facility and alternate facility?	✓			
e. The description of the waste(s) (DOT shipping name, DOT hazard class, DOT identification number)?	✓			
f. The total quantity of waste(s) and the type and number of containers loaded?	✓			
g. Required certification?	✓			
h. Required signatures?	✓			

(4) Reportable exceptions 262.42

a. For manifests examined in (2) (except for shipments within the last 35 days), enter the number of manifests for which the generator has NOT received a signed copy from the designated facility within 35 days of the date of shipment. N/A

b. For manifests indicated in (4a), enter the number for which the generator has submitted exception reports (40 CFR 262.42) to the Regional Administrator. 0

MAJOR SOURCE: ☒ A-1 VOC ☐ A-2 ☐ NESHAP ☐ NSPS ☐ CEM ☐ PSD

LEVEL OF INSPECTION: N/A ☐ LEVEL I ☐ LEVEL II ☐ LEVEL III

INSPECTION RESULTS / REMARKS:

SOURCE / CONTROL	PERMIT / RULE / ORDER	STATUS
#3 Paint Line Coating of Plastic Parts	PE #321-84 / Rule 201 Rule 220	NC - Installed new Paint Booth 10-85 w/out permit and w/out 6 TPY offset

I discussed status of permit application # 906-85, received 11-12-85, for the new paint booth with P. Schleusener, AQD Permits. Paul gave me proposed emission limits for ~~new~~ Line 3 with new booth for PE 906-85; Paul recommends approval subject to offset coming from AQD inventory and voiding 321-84.

I have used Paul's emission estimate to calculate the "emission reduction" which will occur when offsets are provided.

VOC Limits			
pph	TPY		permit #
5.1	15.8	proposed	906-85
3.3	10.3	current	321-84
	5.5	Difference or ~~Net~~ VOC increase	

5.69 to 6.37 #VOC/gal Range
6.27 #/gal most common

1.1 (Rule 220) x 5.5 = 6.0 TPY offset needed.

6.0 - 5.5 = 0.5 TPY Net Allowed Emission Reduction once Rule 220 is complied with.

STATUS CODE: C = COMPLIANCE; NC = NONCOMPLIANCE; NO = NOT OPERATING; U = UNKNOWN

Basis for Recommendation; Comments ① Paints are very similar to paints currently being used; additional control equipment not feasible. (LAER) ② Non-criteria pollutant emissions will comply w/ Rule 901. ③ Statewide sources in compliance. ④ Applicant has requested offsets from inventory. Larry Weemaes agrees w/ conditions (3/19/86). I recommend approval.

Stack, Building & Dispersion Paramaters

Bldg 20' tall. Stack @ 29', & 24" diameter, 5600 cfm. Property line 80' west.
Rain sleeve to 29', 28" diameter.

Dispersion (Yes) No Comments:

Dilutions from modeling: $\left[\frac{(0.042 \times 10^6 \mu g/s)}{2.6 m^3/s}\right] \div 32 \mu g/m^3 = 497$

Emission Calculations (All paints are the same as 321-84, except the gray vinyl primer)

$\left(0.28 \frac{gal}{hr}\right)\left(6.37 \frac{\# VOC}{gal}\right) = 1.78 \# VOC/hr$ (hourly peak VOC rate)

Annual VOC rate =

$\left(0.28 \frac{gal}{hr}\right)\left(6.28 \frac{\# VOC}{gal}\right)\left(24 \times 5 \times 52 \frac{hr}{yr}\right)\left(\frac{1 ton}{2000 \#}\right) = 5.49$ tpy

Expected VOC = $\left(0.28 \frac{gal}{hr}\right)\left(6.27 \#/gal\right) = 1.76 \#/hr$ [spraying only the Bee Chemical since installation. Others "just in case".]

Bee Chemical ~~(Butylcellosolve~~) (RT232)

$$\frac{(1)\left(7.37 \frac{\#}{gal}\right)\left(0.63 \frac{\# VOC}{\# paint}\right) + (1.5)\left(7.36 \frac{\#}{gal}\right)(100\%)}{2.5} = 6.27 \# VOC/gal$$

~~Butylcellosolve~~

$$\cancel{\frac{(1)(7.37)(0.16)}{2.5} = 0.47 \frac{\# Bu Cell}{gal paint}}$$

MDNR-HWD are not satisfied with results of the soil samples. They will conduct their own qualitative analysis. ~~They cannot perform a quantitative analysis because they do not have the necessary equipment.~~

4) Company is cooperative

5) Inspector (Jim Sygo) believes that their (Albar Ind) detection may not be low enough to detect the hazardous chemicals — HWD will perform their own analysis of the soil.

SITE DESCRIPTION/EXECUTIVE SUMMARY

Site Name and Location

Albar Industries
780 Whitney Dr.
Lapeer, Michigan 48446

County: Lapeer
Michigan Code Number: 44-07N-10E-05CB
DNR District: Saginaw
EPA ID Number:

SAS Score/Screen No.: 07

Albar Industries, located in an industrial park on the eastern edge of Lapeer, decorates plastic components for the automotive industry. The paint thinner used at this facility is a blend of methylethyl ketone (MEK) and toluol. The thinner is used in cleaning the masks in the painting operations. Spent thinners are recycled by Lapeer Paint Manufacturing, an adjacent business also owned by Albar. The thinners are recovered by distillation and reused while the still bottoms are manifested as a D001 waste.

On May 6, 1986, a RCRA inspection revealed that waste materials had leaked from drums to an asphalt pad in the container storage area. Because the pad was not properly diked, a 4 foot by 5 foot area of soils immediately adjacent to the pad were stained. A soil sample revealed low levels of MEK.

The drum container storage area has been diked and reconstructed to comply with RCRA. In February, 1987, the stained soils were removed to a depth of two feet. There was no visible contamination remaining in the bottom of the excavation and no contaminants were detected using an H-Nu (the pre-agreed evaluation method) calibrated against on-site solvent drums. The soil samples were tested after the capped sample was heated for 40 minutes. Because a clay layer, ranging from 4 to 100 feet in thickness (beginning at a depth of 2 to 7 feet below grade) underlies the area, groundwater contamination is not suspected. Due to the soil removal, reconstruction of the container area and future compliance review under RCRA, this site no longer meets the definition of an environmental contamination site under Act 307 and is delisted from the FY 1989 MERA Priority Lists.

MDNR-HWD are not satisfied with results of the soil samples. They will conduct their own qualitative analysis. ~~They cannot perform a quantitative analysis because they do not have the necessary equipment.~~

4) Company is cooperative

5) Inspector (Jim Sygo) believes that their (Albar Ind) detection may not be low enough to detect the hazardous chemicals — HWD will perform their own analysis of the soil.

Date: 2/4/88

To: Jim Sygo, Waste Management Division Supervisor, Saginaw District Office

From: George Carpenter, Site Assessment Unit, Environmental Response Division Carp

Albar Delisting From Act 307 Lists

As we discussed during my visit to the Saginaw District Office yesterday, I cannot delist the Albar Site until I have some documentation that they complied with your cleanup instructions. If you could write a letter to your file, with a copy to me, that Albar had submitted and you had approved a cleanup plan for the soils removal, that HNu readings were agreed upon as a sufficient monitor for level of cleanup, and that the soils removal had proceeded according to the plan so that the required level of response was met, I can probably get the site delisted. In my delisting Site Description, I will mention that the company replaced and improved the containment and that future control will be managed through applicable RCRA and Act 64 regulations. Let me know if this meets your approval. I will need to receive the copy by 2/10 in order to get the site delisted this year.

PARTICIPANTS: //

Larry Weinman - plant manager was not available - I contacted Maintenance Manager Gary Jock who directed me to the site of the clean up. Approximately 2 drums of soil had been removed. The drums were scanned with an H-Nu with no deflection indicated.

Snow was cleared from the 4x5x2 excavation site and a bore was used to penetrate the soil. Frozen soil were encountered so a hammer & a steel stake were used to penetrate the soil in 4 areas. The H-Nu showed no deflection. Soils were chipped from the site and collected in a glass jar and allowed to thaw under the car heater while capped. The H-Nu was inserted into the jar after heating for 40 minutes. No deflection was noted. The H-Nu was checked against existing solvent drums at the back of the plant and deflected off scale.

Conclusion: Site had been adequately cleaned up, spills were small losses coming from the asphalt pad area and more than likely evaporated rather than penetrating the soils beyond 2 feet. Adequate samples could not be obtained due to condition of soils.

PART 127 ACT 368, P.A. 1978

PERMIT NUMBER

1 LOCATION OF WELL

NON-RESPONSIVE

[redacted]

2 FORMATION DESCRIPTION	THICKNESS OF STRATUM	DEPTH TO BOTTOM OF STRATUM
Clay	30	30
Gravel	35	65
Clay	50	115
Water Bearing Water	12	127'

3" in. to 123 ft. depth
in. to ft. depth
Grouted Drill Hole Diameter
7/8 in. to 123' ft. depth
in. to ft. depth

Weight lbs./ft.
Drive Shoe ☐ Yes ☐ No

8 SCREEN ☐ Not Installed
Type Johnson Diameter 2"
Slot/Gauze 18 Length 4'
Set between 123' ft. and 127' ft.
FITTINGS ☒ K-Packer ☐ Lead Packer ☐ Bremer Check
☐ Blank above screen ft. Other

9 STATIC WATER LEVEL
100' ft. below land surface ☐ Flow

10 PUMPING LEVEL below land surface
120' ft. after 1 hrs. pumping at 20 G.P.M.
ft. after hrs. pumping at G.P.M.

11 WELL HEAD COMPLETION ☐ Pitless adapter ☒ 12" above grade ☐ Basement offset ☐ Approved pit

12 WELL GROUTED? ☐ No ☒ Yes From 0 to 123' ft.
☐ Neat cement ☒ Bentonite ☐ Other
No. of bags of cement Additives

13 Nearest source of possible contamination
Type Septic Distance 75' ft. Direction W.
Well disinfected upon completion? ☒ Yes ☐ No

14 PUMP ☒ Not Installed ☐ Pump Installation Only
Manufacturer's name
Model number HP Volts
Length of Drop Pipe ft. capacity G.P.M.
Type ☐ Submersible ☐ Set
PRESSURE TANK
Manufacturer's name
Model number
