Cheryl,

I think I figured out the mystery error (error opening again). No .shx file among the files you sent, either yesterday or just now. Files that are absolutely essential include .dbf, .shp, and .shx. Also important is .prj as that contains the projection information, but shapefile will still open without it. You don't have to resend everything again, if you could send just the file with the .shx extension, I believe that will work.

Disregard what I sent about file being opened in ArcMap, that was not the issue. No .shx definitely the problem.

Thanks, Milo

Hi Cheryl,

Didn't work. I'm guessing it's because you had the data open in ArcMap when you sent me the data. I'm thinking that if you were to close ArcMap (saving your work first) and then send me all of the files associated with the shapefile, it would work out fine.

Milo

Hopefully, this worked.

Sincerely,

Cheryl Burdett

Cheryl,

If it's alright, I'd like to have that map I'm doing for you highlight which fields are having manure applied this fall. Can you select them out and send them to me as a separate shapefile?

Milo
