Kwame

Can you please help me the following items related to the Remedial Investigation at the Falcon Refinery Site.

EPA's contractor would like to schedule access to schedule access to portions of the Falcon Refinery. The contractor noted that during previous visits show that the barge dock (AOC 4) is fenced and locked even during the workday and that some areas of AOC 1N and AOC 1S that are fenced. Who does EPA's contractor need to communicate with to obtain access to these portions of the facility?

EPA's contractor will have someone going to the site this Wednesday to work on sampling logistics. Is there someone he could speak with the person who will be providing the access. The contractor needs to understand if there are any restrictions on the time of day for work in these areas.

Thanks
