As required in 40 CFR 262.56(a)(5) and 40 CFR 262.87(a)(5), Except for hazardous waste produced by exporters of greater than 100 kg but less than 1000 kg in a calendar month, unless provided pursuant to §262.41 [biennial report], when submitting in even numbered years:

(i) A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated:	recycling, we are constantly working to improve the capacity and useful life of these products. We offer free recycling for these products and recover for reuse more than 95% of the materials contained. We use the recovered cadmium for making new batteries. The recovered nickel-ferro material is used for making stainless steel.
(ii) A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984:	As a manufacturer of Nickel-Cadmium batteries for commerce and the U.S. Department of Defense, it is difficult to achieve reductions in toxicity. We do strive, however, tp reduce the quantity of hazardous waste generated and to recycle, as much as possible, that quantity that is generated. See below data on the quantities of HW generated and the quantities recycle for the past five years.
