Dear Mr. Reilly

It has come to my attention that there is a product, Hi tec 3000, made by Ethyl Corp. which can produce more gallons of fuel per barrell of oil and cut down on HC, CO and NOx. It is compatible with our modern cars with ox sensors and catalyst systems and has been used in Canada for aprox 10 years.

There appears to be no negetives to this product. However, if you know of any adverse effects, I would be pleased to know what they are.

If not, why isn't the product being tested in at least one section of this great nation to determine its true value?

An answer to the above question will be greatly appreciated.

Very truly yours

Robert W Evaul
