LABORATORY REPORT

Prepared For: APS-Corporate
P.O. Box 53999, M/S 9307
Phoenix, AZ 85072-3999
Attention: Judy Heywood

Project: APS 501,502, & 505

Sampled: 09/12/12
Received: 09/12/12
Issued: 09/24/12 16:48

NELAP #01109CA / AZ100001 Arizona DHS#AZ0728

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CASE NARRATIVE

LABORATORY ID	CLIENT ID	MATRIX

PVI0717-09	MW7S-091212	Water
PVI0717-10	MW6S-091212-B	Water

SAMPLE RECEIPT: Samples were received intact, at 2°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: Results that fall between the MDL and RL are 'E4' flagged.

SUBCONTRACTED: No analyses were subcontracted to an outside laboratory.

DATA QUALIFIERS AND DEFINITIONS

E4	Concentration estimated. Analyte was detected below laboratory minimum reporting limit (MRL).
E8	Analyte reported to the MDL per project specification. Target analyte was not detected in the sample.
R6	LFB/LFBD RPD exceeded the method acceptance limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

LABORATORY REPORT

Prepared For: APS-Corporate
P.O. Box 53999, M/S 9307
Phoenix, AZ 85072-3999
Attention: Judy Heywood

Project: APS 501,502, & 505

Sampled: 09/13/12
Received: 09/13/12
Issued: 09/21/12 10:16

NELAP #01109CA / AZ100001 Arizona DHS#AZ0728

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CASE NARRATIVE

LABORATORY ID	CLIENT ID	MATRIX
PVI0867-01	Trip Blank	Water
PVI0867-02	MW5M2-091312	Water
PVI0867-03	MW5S-091312	Water
PVI0867-04	MW5M-091312	Water

SAMPLE RECEIPT: Samples were received intact, at 2°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: Results that fall between the MDL and RL are 'E4' flagged.

SUBCONTRACTED: No analyses were subcontracted to an outside laboratory.

Report Number: PVI0867

Sampled: 09/13/12
Received: 09/13/12

DATA QUALIFIERS AND DEFINITIONS

E4	Concentration estimated. Analyte was detected below laboratory minimum reporting limit (MRL).
E8	Analyte reported to the MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high; the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low; the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike recovery was acceptable.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Catalog No. 093 Custom Standard **Sample ID # 0221-12-03**

Volatiles by 8260B

Parameter	Certified Value (µg/L)	Performance Acceptance Limits™ (µg/L)
Carbon tetrachloride	6.43	4.13 - 8.01
Tetrachloroethylene	6.17	3.88 - 7.38
Trichloroethylene	6.23	4.57 - 7.48

Standard Preparation Instructions: None required. This sample is ready for preparation and analysis as received.

Preservative: HCl.

The **Certified Values** are equal to 100% of the "made to" values as determined by volumetric and/or gravimetric measurements used during the manufacture of this product.

The ***Performance Acceptance Limits (PALs™)*** are listed as guidelines for acceptable analytical results given the limitations of the USEPA methodologies commonly used to determine these parameters and closely approximate the 95% confidence interval. The ***PALs™*** are based on analytical verification data generated by ERA, independent referee laboratory results and data from USEPA methods, WP, WS and CLP interlaboratory studies. Recovery and advisory range data for these studies are based on ERA's normal manufacturing ranges. The ***PALs™*** listed for this project may not be applicable since the analyte concentrations are outside of ERA's normal manufacturing ranges and a linear relationship to the concentration listed has not been established. If your result falls outside of the ***PALs™***, ERA recommends that you investigate potential sources of error in your preparation and/or analytical procedures. For further technical assistance, call ERA at 1-800-372-0122.

1.0 INTRODUCTION

This report provides an assessment of data quality for the analyses of groundwater samples collected during March 2012 as part of the Focused Remedial Investigation (FRI) and Feasibility Study (FS) being conducted at the Arizona Public Service Company (APS) property located at 501, 502, and 505 South 2nd Avenue, Phoenix, Arizona. The site is located within the boundaries of Operable Unit 3 of the Motorola 52nd Street Superfund Project. The FRI and FS are being completed by APS pursuant to the Administrative Order on Consent (AOC), effective date July 29, 2004 (USEPA Docket No. 2004-25).

The results of the data review and final validated data, as included in Appendix A, are presented in this report. During the period of March 6-7, 2012 AMEC collected nine groundwater samples from monitoring wells, including 2 sets of field duplicate samples. In addition, 2 trip blanks, one field blank and one performance evaluation sample were submitted with the samples. Samples were submitted to TestAmerica Laboratories in Phoenix, AZ for analyses for volatile organic compounds (VOC) by Method 8260B.

The constituents of concern (COCs) defined in the Quality Assurance Project Plan (QAPP) (AMEC, 2005 Part 2) for this site are:

Chloroethane	Tetrachloroethene (PCE)
1,1-Dichloroethane	1,1,1-Trichloroethane
1,2-Dichloroethane	1,1,2-Trichloroethane
1,1-Dichloroethene	Trichloroethene (TCE)
cis-1,2-Dichloroethene	Vinyl chloride
trans-1,2-Dichloroethene	1,4-Dioxane

The analyte 1,4-dioxane has subsequently been dropped from the COC list in concurrence with the U.S. Environmental Protection Agency (USEPA). Laboratory analyses for VOCs were conducted in accordance with USEPA Test Method 8260B and results were reported by TestAmerica for a full 8260B target analyte list. The control limits for surrogate and spike recoveries as presented in the QAPP have been applied for evaluation of data quality.

TestAmerica reported results under two project numbers. Samples are listed in Table 1:

Table 1: Sample List: APS Groundwater Samples – March 2012

Trip Blank 030612	MW-7S-
	Trip Blank
	PE030702
	FB-030712

2.0 SUMMARY OF FINDINGS

Analyses were conducted in compliance with the cited methods and with QAPP requirements. Laboratory quality assurance measures were implemented; accuracy and precision objectives were achieved with minor exceptions that do not affect data usability. Results for the performance evaluation sample obtained from an independent vendor and submitted blind to the laboratory were acceptable.

Data were reported by TestAmerica with appropriate Arizona Department of Environmental Quality (ADEQ) qualifiers. Data below the calibration range are qualified as estimated (J).

3.0 DATA VALIDATION METHODOLOGY

This data validation has been performed as specified in the QAPP (AMEC, 2005 Part 2), in accordance with Tier III requirements of the Region 9 Superfund Data Evaluation/Validation Guidance, R9QA/006.1 (USEPA, 2001) and in accordance with USEPA Region 9 Standard Operating Procedure 901 R2 for data review of volatile data packages (03/30/06). These USEPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data validation where they differ from USEPA Method SW-846 quality control requirements.

The data review and validation process included 100% full validation of the raw analytical data for all groundwater samples. The laboratory's Level IV analytical data packages were reviewed to determine whether the measurement quality objectives for the program as presented in Section 2.4 of the QAPP and the data evaluation criteria presented in Table 11 of the QAPP were satisfied. The following elements were included in the review:

- chain of custody and sample receipt records
- compliance with specified holding time requirements;
- calibration and instrument performance, including instrument stability as monitored by internal standards
- presence or absence of laboratory contamination as demonstrated by method, trip and field blanks;
- accuracy and bias as demonstrated by results for performance evaluation samples, recovery of surrogate spikes, internal standards, blank spikes (BS), matrix spikes (MS);
- analytical precision as relative percent difference (RPD) of analyte concentration between replicate samples such as field duplicates and laboratory duplicates such as matrix spike (MS) and matrix spike duplicate (MSD) samples and Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) samples;
- target compound identifications
- system performance

Data qualifiers were applied consistent with EPA guidance and the ADEQ requirements.

4.0 DATA VALIDATION FINDINGS

4.1 Chain of Custody and Sample Receipt

All samples were delivered directly by AMEC to the laboratory under Chain of Custody. Samples were received in good condition at TestAmerica. One cooler temperature was slightly above the 4°C limit as required by the QAPP, but below the 6°C limit specified by EPA method. This likely reflects insufficient time between the field and delivery to the laboratory for temperature in the cooler to equilibrate. No data have been qualified. Samples for VOC analysis were collected with hydrochloric acid preservative and submitted with zero headspace.

4.2 Holding Times

All VOC sample analyses were completed within the method-specified holding time of 14 days for preserved samples.

4.3 Instrument Performance, Calibration and Stability

The ability of the instrument to correctly identify volatile organic target analytes was demonstrated through the analysis of bromofluorobenzene within 12 hours of all volatile organics sample analyses.

The mass spectrometer used for analyses of samples was calibrated over the range of 0.5 µg/l to 200 µg/l on March 12, 2012. Calibrations met QAPP and method requirements with relative response factors (RRF) greater than 0.05 and % relative standard deviations (%RSD) of less than 15% for all COCs. Linear calibration was used for acetone and 1,3-transdichloropropene. Neither of the analytes with linear calibrations are COCs for the program and none were detected in samples. The correlation coefficients were greater than 0.99 for all linear calibrations.

Raw data for the initial calibration verification (ICV) with a second-source standard was included in the data packages. All analytes in the ICV analysis were within the laboratory's accuracy limits.

Continuing calibration verification (CCV) analyses of standards at 25 µg/L met the QAPP requirement of $\leq$ 15% difference for the COCs and Method 8260 requirements for the full target analyte list for all sample analyses. The instrument response to internal standards is monitored as a measure of the analytical performance. All internal standards for the VOC analyses met the method criteria with responses within the specified range of 50-150% of their response in the continuing calibration standard analyzed prior to the samples.

4.4 Blanks

Blank samples are aliquots of analyte free water that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive

results. The types of blanks employed for this sampling event included laboratory method blanks, field blanks and trip blanks for volatile organics.

Hexachlorobutadiene was detected in both method blanks for PVC0524 and PVC0465 at 1.1 µg/l, which is slightly above the reporting limit. This is attributable to carryover in the system. Hexachlorobutadiene was detected in most samples at lower concentrations, below the method reporting limit. All detections for this compound have been qualified to be non-detected at the reporting limit.

Chloroform was detected at a trace level in the Field Blank for the samples collected on March 7, 2012 (PVC0254). Levels of chloroform in samples MW-7-S, MW-5S-A-030712 and MW-4S-A-030712 fell below 5 times the Field Blank concentration. In accordance with EPA Guidelines, these results have been qualified to be non-detected at the level detected, but it should be noted that chloroform has been detected historically in these wells without blank detections.

ADEQ qualifiers for blank contamination are defined for instances where the blank is above the method reporting limit. For the purposes of this project, the B1 flag has been applied to those results where the reported detection has been qualified to be non-detected based on a blank detection between the MDL and RL.

4.5 Performance Evaluation Samples

One performance evaluation (PE) sample was submitted to TestAmerica with program samples. This was a water sample with certified concentrations of target analytes prepared by ERA The Water Company of Golden, CO that was submitted to the laboratory with the March 7, 2012 samples. The PE sample contained tetrachloroethene, carbon tetrachloride, and trichloroethene. Results fell within performance limits for these analytes.

Table 2: Performance Evaluation Sample Analyses, March 2012

Analyte	Result	Certified Value	ERA Performance
	µg/l	µg/l	Limits
TestAmerica, March 2012			
Carbon Tetrachloride	6.5	6.43	4.13-8.01
Tetrachloroethylene	5.8	6.17	3.88-7.38
Trichloroethylene	6.3	6.23	4.57-7.48

4.6 Laboratory Control Sample (LCS) and Duplicates (LCSD) Recoveries and Precision

LCSs are blank spikes prepared by adding known quantities of the target analytes or a representative subset of those analytes to laboratory deionized water. The LCS is passed through the same concentration and analytical procedures as the samples they accompany. LCS recoveries and precision are an indication of the ability of a laboratory to successfully perform an analytical method in an interference-free matrix.

Naphthalene recovered marginally above the control limit in one LCS accompanying the March 7, 2012 samples. Naphthalene was not detected in any program sample and no data have been qualified.

4.7 Surrogate Spike Recoveries

Surrogate spikes are used to evaluate accuracy, method performance, and extraction efficiency in each individual sample. Surrogate compounds are compounds not normally found in environmental samples, but which are similar to target analytes in chemical composition and behavior in the analytical process. TestAmerica utilized toluene-d_8, bromofluorobenzene (BFB) and dibromofluoromethane as surrogates for VOC analyses. All VOC surrogate recoveries were acceptable.

4.8 Matrix Spike and Matrix Spike Duplicate Analyses

MS and MSD samples are prepared by adding known amounts of the analytes to an aliquot of sample. The spiked sample is then processed through the same procedures as the unspiked samples in an analytical batch. MS recovery and precision indicate the laboratory's ability to successfully recover an analyte in the matrix of a specific sample or related sample matrices.
MS/MSD samples accompanying APS samples were prepared from MW-4S-A-030712. Recoveries and precision were acceptable.

4.9 Field Duplicate Results

Field duplicates are replicate samples collected at the same location. Field duplicates provide an indication of the reproducibility of the sampling and analysis procedures for a given sample matrix.

All detections in the duplicate samples fell below 5 times the reporting limit, where precision criteria are not generally applicable. Even at the trace levels present, however, results for all detections in the sets of field duplicates collected did demonstrate precision within QAPP and EPA criteria.

Table 4: Field Duplicate Precision

Well/Sampling Date	MW-6-S 03/07/12			MW-1-S 03/06/12		
	µg/l A	µg/l B	RPD	µg/l A	µg/l B	RPD
Bromodichloromethane	0.68	0.64	3%	<0.5	<0.5	NA
Chloroform	1.7	1.7	0%	1.0	0.98	2%
Dibromochloromethane	0.24J	0.26J	8%	<0.5	<0.5	NA
Tetrachloroethene	1.7	1.7	0%	0.81	0.67	19
Trichloroethene	0.97	1.0	3%	<0.5	<0.5	NA

J = Estimated value, below reporting limit
NA = Not applicable.

4.10 Target Compound Identifications

The raw data for all reported analytes were reviewed to confirm that they met method criteria for positive identification and that there was no evidence of potential interference or carryover from previous samples.

4.11 Reporting Limits

Reporting limits for the COCs satisfy the QAPP requirement of 1 μg/l. Laboratory detection limits were reviewed to verify that reporting limits were established appropriately. Analytes detected below the reporting limit but above the method detection limit were reported and have been qualified as estimated.

4.12 Compound Quantitation

Calculations were verified on a random basis for reported analytes. No errors were detected for analytes quantified on the basis of average response factors.

5.0 SUMMARY AND CONCLUSIONS

Based on the review conducted, the data are usable and of acceptable quality. Measurement quality objectives for accuracy, precision and sensitivity as defined by the QAPP for the COCs have been achieved.

APPENDIX B

VALIDATION QUALIFIERS

USEPA VALIDATION DATA QUALIFIER DEFINITIONS

U The U qualifier indicates that the analyte must be considered to be nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in field, trip, or laboratory blanks.

J The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation indicate a data limitation related to a QC element that exceeds required acceptance limits.

UJ The UJ qualifier indicates that the associated analyte was not detected at or above the method detection limit (MDL). However, the reported MDL is approximate and may be inaccurate or imprecise.

N The N qualifier indicates an analyte has been presumptively identified. Presumptive detection means that a chromatographic peak was detected at the correct retention time for an analyte, but that not all required identification criteria were met. The associated result is both qualitatively and quantitatively uncertain.

R The R qualifier indicates that a result has been rejected due to serious QC problems. It is not possible to definitively determine whether the analyte is present or absent in the sample.

Arizona Data Qualifiers Established By
The Arizona Department of Health Services

Revision 3.0

Qualifier	Meaning
Microbiology	
A1	Too numerous to count
A2	Sample incubation period exceeded method requirement
A3	Sample incubation period was shorter than method requirement
A4	Target organism detected in associated method blank
A5	Incubator/water bath temperature was outside method requirements
A6	Target organism not detected in associated positive control
A7	Micro sample received without adequate headspace
A8	Plate count was outside the method's reporting range. Reported value is estimated.
Method/Calibration Blank	
B1	Target analyte detected in method blank at or above the method reporting limit
B2	Non-target analyte detected in method blank and sample, producing interference
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	Target analyte detected in blank at/above method acceptance criteria
B5	Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL
B6	Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank
Qualifier	Matrix spike recovery was high, the method control sample recovery was acceptable
Microbiology	Matrix spike recovery was low, the method control sample recovery was acceptable

Qualifier	Meaning
Microbiology	
A1	Too numerous to count
A2	Sample incubation period exceeded method requirement
A3	Sample incubation period was shorter than method requirement
A4	Target organism detected in associated method blank
A5	Incubator/water bath temperature was outside method requirements
A6	Target organism not detected in associated positive control
A7	Micro sample received without adequate headspace
Method/Calibration Blank	
B1	Target analyte detected in method blank at or above the method reporting limit
B2	Non-target analyte detected in method blank and sample, producing interference
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	Target analyte detected in blank at/above method acceptance criteria
B5	Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL
B6	Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank
Confirmation	
C1	Confirmatory analysis not performed as required by the method
C3	Qualitative confirmation performed
C4	Confirmatory analysis was past holding time
C5	Confirmatory analysis was past holding time
C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was not obvious

	chromatographic interference
C7	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference
Dilution	
D1	Sample required dilution due to matrix
D2	Sample required dilution due to high concentration of target analyte
D3	Sample dilution required due to insufficient sample
D4	Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed
Estimated Concentration	
E1	Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL)
E5	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but not confirmed by alternate analysis
E6	Concentration estimated. Internal standard recoveries did not meet method acceptance criteria
E7	Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample
Hold Time	
H1	Sample analysis performed past holding time.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past holding time

H3	Sample was received and analyzed past holding time
H4	Sample was extracted past required extraction holding time, but analyzed within analysis holding time
BOD	
K1	The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value
K2	The sample dilutions set-up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value
K4	The seed depletion was outside the method acceptance limits. The reported result is an estimated value
K5	The dilution water D.O. depletion was > 0.2 mg/L
K6	Glucose/glutamic acid BOD was below method acceptance criteria
K7	A discrepancy between the BOD and COD results has been verified by reanalysis of the sample of COD
K8	Glucose/glutamic acid BOD was above method acceptance levels
Laboratory Fortified Blank/Blank Spike	
L1	The associated blank spike recovery was above laboratory acceptance limits
L2	The associated blank spike recovery was below laboratory acceptance limits
L3	The associated blank spike recovery was above method acceptance limits
L4	The associated blank spike recovery was below method acceptance limits
Matrix Spike	
M1	Matrix spike recovery was high, the method control sample recovery was acceptable
M2	Matrix spike recovery was low, the method control sample recovery was acceptable
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable
M4	The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable

M5	Analyte concentration was determined by the method of standard addition (MSA)
M6	Matrix spike recovery was high. Data reported per ADEQ policy 0154.000
M7	Matrix spike recovery was low. Data reported per ADEQ policy 0154.000
General	
N1	See case narrative
N2	See corrective action report
N3	The analysis meets all method requirements. See case narrative
Sample Quality	
Q1	Sample integrity was not maintained. See case narrative
Q2	Sample received with head space
Q3	Sample received with improper chemical preservation
Q4	Sample received and analyzed without chemical preservation
Q5	Sample received with inadequate chemical preservation, but preserved by the laboratory
Q6	Sample was received above recommended temperature
Q7	Sample inadequately dechlorinated
Q8	Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155
Q9	Insufficient sample received to meet method QC requirements
Q10	Sample received in inappropriate sample container
Q11	Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices
Duplicates	
R1	RPD exceeded the method control limit. See case narrative
R2	RPD exceeded the laboratory control limit. See case narrative
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria
R5	MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria

R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria
R7	LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria
R8	Sample RPD exceeded the method control limit
R9	Sample RPD exceeded the laboratory control limit
R10	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems
R11	The RFD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used
Surrogates	
S1	Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits
S3	Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample
S4	Surrogate recovery was above laboratory method acceptance limits. No target analytes were detected in the sample
S5	Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits
S6	Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect
S7	Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect
S8	The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable
S10	Surrogate recovery was above laboratory and method acceptance limits. See case narrative
S11	Surrogate recovery was high. Data reported per ADEQ policy 154.000
S12	Surrogate recovery was low. Data reported per ADEQ policy 154.000

Method/Analyte Discrepancies	
T1	Method approved by EPA, but not yet licensed by ADHS.
T2	Cited ADHS licensed method does not contain this analyte as part of method compound list
T3	Method not promulgated either by EPA or ADHS
T4	Tentatively identified compound. Concentration is estimated and based on the closest internal standard
Calibration Verification	
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample
V2	CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample
V3	CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative
V4	CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample
V5	CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B
V6	Data reported from one-point calibration criteria per ADEQ policy 155.000
V7	Calibration verification recovery was above the method control limit for this analyte, however, the average % difference or % drift for al the analytes met method criteria
V8	Calibration verification recovery was below the method control limit for this analyte, however the aver % difference or the % drift for all the analytes met method criteria
Calibration	
W1	The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA Method 8000B
W2	The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C

Laura Menken
AMEC Environmental & Infrastructure
4600 E. Washington St, ste 600
Phoenix, AZ 85034

Dear Laura:

Enclosed please find the certification documentation for the whole volume performance evaluation samples that you recently ordered. The samples were shipped on March 6, 2012 via FedEx Priority Overnight service to your attention. The ERA project number corresponding to these samples is 0221-12-03.

Thank you for choosing ERA for this project. If you have any questions or if we can be of any further assistance please do not hesitate to call.

Sincerely,

Chad Lane

Account No. A796023

Catalog No. 093 Custom Standard **Sample ID # 0221-12-03**

Volatiles by 8260B

Parameter	Certified Value (µg/L)	Performance Acceptance Limits™ (µg/L)
Carbon tetrachloride	6.43	4.13 - 8.01
Tetrachloroethylene	6.17	3.88 - 7.38
Trichloroethylene	6.23	4.57 - 7.48

Standard Preparation Instructions: None required. This sample is ready for preparation and analysis as received.

Preservative: HCl.

The **Certified Values** are equal to 100% of the "made to" values as determined by volumetric and/or gravimetric measurements used during the manufacture of this product.

The ***Performance Acceptance Limits (PALs™)*** are listed as guidelines for acceptable analytical results given the limitations of the USEPA methodologies commonly used to determine these parameters and closely approximate the 95% confidence interval. The ***PALs™*** are based on analytical verification data generated by ERA, independent referee laboratory results and data from USEPA methods, WP, WS and CLP interlaboratory studies. Recovery and advisory range data for these studies are based on ERA's normal manufacturing ranges. The ***PALs™*** listed for this project may not be applicable since the analyte concentrations are outside of ERA's normal manufacturing ranges and a linear relationship to the concentration listed has not been established. If your result falls outside of the ***PALs™***, ERA recommends that you investigate potential sources of error in your preparation and/or analytical procedures. For further technical assistance, call ERA at 1-800-372-0122.

1.0 INTRODUCTION

This report provides an assessment of data quality for the analyses of groundwater samples collected during September 2012 as part of the Focused Remedial Investigation (FRI) and Feasibility Study (FS) being conducted at the Arizona Public Service Company (APS) property located at 501, 502, and 505 South 2nd Avenue, Phoenix, Arizona. The site is located within the boundaries of Operable Unit 3 of the Motorola 52nd Street Superfund Project. The FRI and FS are being completed by APS pursuant to the Administrative Order on Consent (AOC), effective date July 29, 2004 (USEPA Docket No. 2004-25).

During the period of September 10-13, 2012 AMEC collected twenty (20) groundwater samples from monitoring wells, including 2 sets of field duplicate samples. In addition, 4 trip blanks, one field blank and one performance evaluation (PE) sample were submitted with the samples to TestAmerica Laboratories in Phoenix, AZ for analyses for volatile organic compounds (VOC) by Method 8260B.

The results of the data review and final validated data, as included in Appendix A, are presented in this report. United States Environmental Protection Agency (USEPA) and Arizona data qualifiers as listed in Appendix B have been applied as appropriate.

The constituents of concern (COCs) defined in the Quality Assurance Project Plan (QAPP) (AMEC, 2005 Part 2) for this site are:

Chloroethane	cis-1,2-Dichloroethene	1,1,2-Trichloroethane
1,1-Dichloroethane	trans-1,2-Dichloroethene	Trichloroethene (TCE)
1,2-Dichloroethane	Tetrachloroethene (PCE)	Vinyl chloride
1,1-Dichloroethene	1,1,1-Trichloroethane	1,4-Dioxane

The analyte 1,4-dioxane has subsequently been dropped from the COC list. Results have been reported by TestAmerica for a standard USEPA Method 8260B target analyte list. The control limits for surrogate and spike recoveries as presented in the QAPP have been applied for evaluation of data quality.

TestAmerica reported results under four project numbers. Samples are listed in Table 1:

2.0 SUMMARY OF FINDINGS

Analyses were conducted in compliance with the cited methods and with QAPP requirements. Laboratory quality assurance measures were implemented; accuracy and precision objectives were achieved for method-required quality control measurements and samples. Results for the performance evaluation sample obtained from an independent vendor, as documented in Appendix C, were acceptable for two of the tested analytes; results for trichloroethylene were slightly below the acceptance limit. This outlier and subsequent investigative efforts are discussed in Section 4.5. All results and detection limits for trichloroethylene are qualified as estimated with potential low bias.

Documentation lapses in the laboratory were noted during the review. Upon notification by AMEC, the laboratory reviewed records, confirmed that data as reported were correct and initiated Corrective Actions. Documentation on the laboratory's responses and copies of the Corrective Action Reports are provided in Appendix D.

Data were reported by TestAmerica with appropriate Arizona Department of Environmental Quality (ADEQ) qualifiers. Data below the calibration range are qualified as estimated (J).

3.0 DATA VALIDATION METHODOLOGY

This data validation has been performed as specified in the QAPP (AMEC, 2005 Part 2), in accordance with Tier III requirements of the Region 9 Superfund Data Evaluation/Validation Guidance, R9QA/006.1 (EPA, 2001) and in accordance with USEPA Region 9 Standard Operating Procedure 901 R2 for data review of volatile data packages (03/30/06). These USEPA guidelines were written specifically for the Contract Laboratory Program (CLP), and have been modified for the purposes of this data validation where they differ from USEPA Method SW-846 quality control requirements.

The data review and validation process included 100% full validation of the raw analytical data for all groundwater samples. The laboratory's Level IV analytical data packages were reviewed to determine whether the measurement quality objectives for the program as presented in Section 2.4 of the QAPP and the data evaluation criteria presented in Table 11 of the QAPP were satisfied. Laboratory Control Limits as provided to EPA in December 2008 were applied for the review. The following elements were included in the review:

- chain of custody and sample receipt records
- compliance with specified holding time requirements;
- calibration and instrument performance, including instrument stability as monitored by internal standards
- presence or absence of laboratory contamination as demonstrated by method, trip and field blanks;
- accuracy and bias as demonstrated by results for performance evaluation samples, recovery of surrogate spikes, internal standards, blank spikes (BS), matrix spikes (MS);
- analytical precision as relative percent difference (RPD) of analyte concentration between replicate samples such as field duplicates and laboratory duplicates such as matrix spike (MS) and matrix spike duplicate (MSD) samples and Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD)samples;
- target compound identifications
- system performance

Data qualifiers were applied consistent with EPA guidance and the ADEQ requirements.

4.0 DATA VALIDATION FINDINGS

4.1 Chain of Custody and Sample Receipt

All samples were delivered directly by AMEC on the day of sampling to the laboratory under Chain of Custody. Samples were received in good condition at TestAmerica with cooler temperatures ranging from 1.4^{o}C to 2.1^{o}C. Samples for VOC analysis were collected with hydrochloric acid preservative and submitted with zero headspace.

The COC for the September 11, 2012 samples reflects confusion during sample log-in at the laboratory, with ID's initially assigned then changed by laboratory personnel. Field duplicate samples MW6S-091212A and MW6S-091212B were ultimately logged into the laboratory system on September 12 as one sample, 0717-03. The sample duplicate was then analyzed one week after the others in the sample delivery group (SDG) and reported under the ID 0717-10, but no documentation for this later ID assignment or corrective action report for the log-in error was included in the data package. The laboratory was contacted during the validation review, and subsequently provided an explanation for the error, confirmation of the sample identification and reported data and their Corrective Action Report. This documentation is included in Appendix D. Reported data for the field duplicates are considered valid.

4.1.1 Laboratory Internal Custody Records

An additional discrepancy in laboratory records was noted during the data documentation review for the September 12, 2012 samples. The hand-written instrument run-log listed samples from TA project 0714, while the typed instrument log for the analysis sequence listed samples from the APS Project 0717. Data were reported from the sequence for the APS samples and appeared consistent with historical results for the groundwater wells, but documentation was considered compromised. The laboratory was notified and confirmed that no samples from their project 0714 were in the laboratory for VOC analysis and that this reflected an analyst hand-written entry error that had been corrected in the instrument entry, but the documentation trail not been corrected. Their response and Corrective Action Report are included in Appendix D. Reported data are considered valid for project use.

4.2 Holding Times.

All VOC sample analyses were completed within the method-specified holding time of 14 days for preserved samples.

4.3 Instrument Performance, Calibration and Stability

The ability of the instrument to correctly identify volatile organic target analytes was demonstrated through the analysis of bromofluorobenzene within 12 hours of all volatile organics sample analyses.

The mass spectrometers used for analyses of samples were calibrated with nine standards over the range of 0.5 µg/l to 200 µg/l on July 9 and August 10, 2012. The calibrations met QAPP and method requirements with relative response factors (RRF) greater than 0.05 and % relative standard deviations (%RSD) of less than 15% for all COCs. Quadratic calibration was used on the August 10 calibration for hexachlorobutadiene 1,2,3-trichlorobenzene, and 1,2-dibromo-3-chloropropane. None of these analytes were detected in program samples. Correlation coefficients were greater than 0.99 for all quadratic calibrations.

For the July 9, 2012 instrument calibration, a linear curve was used for cis-1,2-dichloroethene, trans-1.2-dichloroethene, 1,1,1-trichloroethane 2,2-dichloropropane while 1,2-dibromo-3-chloropropane and hexachlorobutadiene were based on quadratic equations. This calibration was applicable to only the field duplicate sample MW6S-091112B.

Raw data for the initial calibration verifications (ICV) with a second-source standard wereincluded in the data packages. All analytes in the ICV analyses were within the laboratory's accuracy limits for both calibrations.

Continuing calibration verification (CCV) analyses of standards at 25 µg/L met the QAPP requirement of $\leq$ 15% difference for the COCs and Method 8260 requirements for the full target analyte list for all sample analyses. Recoveries of hexachlorobutadiene and 1,2-dibromo-3-

chloropropane were above the laboratory's performance-based limits for the CCVs associated with the September 11, 12 and 13, 2012 samples. Neither analyte was detected in any program sample and no data have been qualified.

The instrument response to internal standards is monitored as a measure of the analytical performance. All internal standards for the VOC analyses met the method criteria with responses within the specified range of 50-150% of their response in the continuing calibration standard analyzed prior to the samples.

4.4 Blanks

Blank samples are aliquots of analyte free water that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results. The types of blanks employed for this sampling event included laboratory method blanks, field blanks and trip blanks for volatile organics.

With one exception, no analytes were detected in the laboratory or field blanks. A trace level of naphthalene was detected in the laboratory method blank associated with MW6S-091112B. Naphthalene was not detected in the sample and no data were qualified.

Acetone was detected in the trip blank for the September 10 samples. No acetone was detected in program samples and no data have been qualified.

4.5 Performance Evaluation Samples

One performance evaluation (PE) sample was submitted to TestAmerica with program samples. This was a water sample with certified concentrations of target analytes prepared by ERA of Golden, CO that was submitted to the laboratory with the September 12, 2012 samples. The PE sample contained tetrachloroethene, carbon tetrachloride, and trichloroethene. Results fell within performance limits for carbon tetrachloride and tetrachloroethylene, but the laboratory result for trichloroethylene was slightly below the lower performance limit. The apparent recovery was 71.5%.

Table 2: Performance Evaluation Sample Analyses, September 2012

Analyte	Result µg/l	Certified Value µg/l	ERA Performance Limits
TestAmerica, September 2012			
Carbon Tetrachloride	7.2	7.51	4.87 – 9.40
Tetrachloroethylene	5.1	7.20	4.54 - 8.62
Trichloroethylene	5.2	7.27	5.38 - 8.72

ERA notes on their documentation, included in Appendix C, that the performance limits may not be applicable since the analyte concentrations are lower than their normal manufacturing range. No apparent reason for the discrepancy could be identified. Accuracy for all analytes was

acceptable in the calibration check standard, blank spikes and matrix spikes accompanying these samples. The calibration curve did not show any trends in response factors at lower concentrations that would explain the low result. Peak integrations appeared correct and calculations were verified.

After TA was notified by AMEC that the reported trichloroethylene result fell outside the acceptance limits, the laboratory initiated a full investigation, including analyses of retained samples of the ERA PE sample. Results for the re-analyses of the PE sample in December 2012 by both the Phoenix and Denver TA labs were within acceptance limits. Results for an additional QC sample procured from another vendor were also acceptable. TA concluded that the result was an “anomaly”. Documentation is included in Appendix D for the laboratory investigation.
Historical data were reviewed to determine if the PE result likely indicated significant low bias to sample results. During the monitoring period of 2009 to present, levels of TCE above the method reporting limit of 0.5 µg/l have been detected only in MW-2S, MW-3S, MW-6S and MW-7S. As presented below, results for these wells from the September sampling fall within the range of recent data.

Monitoring Well	2009		2010		2011		2012	
	March	Sept.	March	Sept.	March	Sept.	March	Sept.
MW-2S	0.45 J	0.72	0.42 J	0.57	0.99	0.56	0.24 J	0.39 J
MW-3S	2.1	1.4	1.4	0.63	0.6	0.71	0.99	1.5
MW-6S	0.67	1.6	2.5	1.1	0.99	<0.5	0.97	0.32J 0.48J
MW-7S	0.57	<0.5	0.51	0.79	0.42 J	0.26 J	0.42 J	<0.5

The apparent recovery of 71% does not warrant rejection of sample results, but all results and detection limits for trichloroethylene are qualified as estimated (J) with a potential low bias.

4.6 Laboratory Control Sample (LCS) and Duplicates (LCSD) Recoveries and Precision

LCSs are blank spikes prepared by adding known quantities of the target analytes or a representative subset of those analytes to laboratory deionized water. The LCS is passed through the same preparation and analytical procedures as the samples they accompany. LCS recoveries and precision are an indication of the ability of a laboratory to successfully perform an analytical method in an interference-free matrix.

Recoveries of dibromochloromethane demonstrated variability above the control limit (24% RPD vs. limit of 22%RPD) for the LCS/LCSD set associated with the analysis of three September 12, 2012 samples. Variability for recoveries of acetone (52%RPD vs. limit of 35% RPD and 1,2,3-trichloropropane (25% RPD vs. limit ot 20% RPD) were also above variability control limits for the LSD/LSD set associated with September 10 samples. None of these analytes were detected in any program sample and no data have been qualified.

4.7 Surrogate Spike Recoveries

Surrogate spikes are used to evaluate accuracy, method performance, and extraction efficiency in each individual sample. Surrogate compounds are compounds not normally found in environmental samples, but which are similar to target analytes in chemical composition and behavior in the analytical process. TestAmerica utilized toluene-d_8, bromofluorobenzene (BFB) and dibromofluoromethane as surrogates for VOC analyses. All VOC surrogate recoveries were acceptable.

4.8 Matrix Spike and Matrix Spike Duplicate Analyses

MS and MSD samples are prepared by adding known amounts of the analytes to an aliquot of sample. The spiked sample is then processed through the same procedures as the unspiked samples in an analytical batch. MS recovery and precision indicate the laboratory's ability to successfully recover an analyte in the matrix of a specific sample or related sample matrices.

MS/MSD samples accompanying APS samples were prepared from MW3M2-091112, and MW3S-091112. Hexachlorobutadiene recovered above the laboratory limit in the spikes from MW3M2-091112 (156%, 157% vs. limit of 150%). This analyte was not detected in any program sample and no data have been qualified. Recoveries and precision for all COCs were acceptable.

Additional MS/MSD sets accompanying the September 10 and 13, 2012 APS samples were prepared from other program submittals. Recovery of bromodichloromethane was low (57%, 59%) and that for hexachlorobutadiene was high in the MS/MSD accompanying the September 13 samples. Since the sample matrix was not necessarily representative of APS samples and these analytes were not detected in APS samples, no data have been qualified.

4.9 Field Duplicate Results

Field duplicates are replicate samples collected at the same location. Field duplicates provide an indication of the reproducibility of the sampling and analysis procedures for a given sample matrix.

All detections in the duplicate samples fell below 5 times the reporting limit, where precision criteria are not generally applicable. Even at the trace levels present, however, results for detections in the sets of field duplicates collected did demonstrate acceptable precision within QAPP and EPA criteria.

Table 4: Field Duplicate Precision

Well/Sampling Date	MW-6-S 09/12/12			MW-1-S 09/11/12		
	µg/l A	µg/l B	RPD	µg/l A	µg/l B	RPD
Chloroform	0.82	0.65	23%	0.55	0.58	5%
Tetrachloroethene	0.59	0.57	3%	0.54	0.44J	20%
Trichloroethene	0.32J	0.48J	NA	<0.5	<0.5	NA

J = Estimated value, below reporting limit
NA = Not applicable.. RPD not calculated for non-detected results or pairs of estimated results.

4.10 Target Compound Identifications

The raw data for all reported analytes were reviewed to confirm that they met method criteria for positive identification and that there was no evidence of potential interference or carryover from previous samples.

4.11 Reporting Limits

Reporting limits for the COCs satisfy the QAPP requirement of 1 µg/l. Laboratory detection limits were reviewed to verify that reporting limits were established appropriately. Analytes detected below the reporting limit but above the method detection limit were reported and have been qualified as estimated.

4.12 Compound Quantitation

Calculations were verified on a random basis for reported analytes. No errors were detected for analytes quantified on the basis of average response factors.

5.0 SUMMARY AND CONCLUSIONS

Based on the review conducted, the data are usable with some qualifications. The PE result for trichloroethylene requires qualification for results of this analyte as estimated; all other measurements for accuracy, precision and sensitivity met project objectives as defined by the QAPP for the COCs.

APPENDIX B

VALIDATION QUALIFIERS

USEPA VALIDATION DATA QUALIFIER DEFINITIONS

U The U qualifier indicates that the analyte must be considered to be nondetected at the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in field, trip, or laboratory blanks.

J The J qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation indicate a data limitation related to a QC element that exceeds required acceptance limits.

UJ The UJ qualifier indicates that the associated analyte was not detected at or above the method detection limit (MDL). However, the reported MDL is approximate and may be inaccurate or imprecise.

N The N qualifier indicates an analyte has been presumptively identified. Presumptive detection means that a chromatographic peak was detected at the correct retention time for an analyte, but that not all required identification criteria were met. The associated result is both qualitatively and quantitatively uncertain.

R The R qualifier indicates that a result has been rejected due to serious QC problems. It is not possible to definitively determine whether the analyte is present or absent in the sample.

Arizona Data Qualifiers Established By
The Arizona Department of Health Services

Revision 3.0

Qualifier	Meaning
Microbiology	
A1	Too numerous to count
A2	Sample incubation period exceeded method requirement
A3	Sample incubation period was shorter than method requirement
A4	Target organism detected in associated method blank
A5	Incubator/water bath temperature was outside method requirements
A6	Target organism not detected in associated positive control
A7	Micro sample received without adequate headspace
A8	Plate count was outside the method's reporting range. Reported value is estimated.
Method/Calibration Blank	
B1	Target analyte detected in method blank at or above the method reporting limit
B2	Non-target analyte detected in method blank and sample, producing interference
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	Target analyte detected in blank at/above method acceptance criteria
B5	Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL
B6	Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank

Qualifier	Meaning
Microbiology	
A1	Too numerous to count
A2	Sample incubation period exceeded method requirement
A3	Sample incubation period was shorter than method requirement
A4	Target organism detected in associated method blank
A5	Incubator/water bath temperature was outside method requirements
A6	Target organism not detected in associated positive control
A7	Micro sample received without adequate headspace
Method/Calibration Blank	
B1	Target analyte detected in method blank at or above the method reporting limit
B2	Non-target analyte detected in method blank and sample, producing interference
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	Target analyte detected in blank at/above method acceptance criteria
B5	Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL
B6	Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank
Confirmation	
C1	Confirmatory analysis not performed as required by the method
C3	Qualitative confirmation performed
C4	Confirmatory analysis was past holding time
C5	Confirmatory analysis was past holding time
C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per

	EPA Method 8000B, the higher value was reported as there was not obvious chromatographic interference
C7	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference
Dilution	
D1	Sample required dilution due to matrix
D2	Sample required dilution due to high concentration of target analyte
D3	Sample dilution required due to insufficient sample
D4	Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed
Estimated Concentration	
E1	Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL)
E5	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but not confirmed by alternate analysis
E6	Concentration estimated. Internal standard recoveries did not meet method acceptance criteria
E7	Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample
Hold Time	
H1	Sample analysis performed past holding time.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past

	holding time
H3	Sample was received and analyzed past holding time
H4	Sample was extracted past required extraction holding time, but analyzed within analysis holding time
BOD	
K1	The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value
K2	The sample dilutions set-up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value
K4	The seed depletion was outside the method acceptance limits. The reported result is an estimated value
K5	The dilution water D.O. depletion was > 0.2 mg/L
K6	Glucose/glutamic acid BOD was below method acceptance criteria
K7	A discrepancy between the BOD and COD results has been verified by reanalysis of the sample of COD
K8	Glucose/glutamic acid BOD was above method acceptance levels
Laboratory Fortified Blank/Blank Spike	
L1	The associated blank spike recovery was above laboratory acceptance limits
L2	The associated blank spike recovery was below laboratory acceptance limits
L3	The associated blank spike recovery was above method acceptance limits
L4	The associated blank spike recovery was below method acceptance limits
Matrix Spike	
M1	Matrix spike recovery was high, the method control sample recovery was acceptable
M2	Matrix spike recovery was low, the method control sample recovery was acceptable
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable
M4	The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample

	recovery was acceptable
M5	Analyte concentration was determined by the method of standard addition (MSA)
M6	Matrix spike recovery was high. Data reported per ADEQ policy 0154.000
M7	Matrix spike recovery was low. Data reported per ADEQ policy 0154.000
General	
N1	See case narrative
N2	See corrective action report
N3	The analysis meets all method requirements. See case narrative
Sample Quality	
Q1	Sample integrity was not maintained. See case narrative
Q2	Sample received with head space
Q3	Sample received with improper chemical preservation
Q4	Sample received and analyzed without chemical preservation
Q5	Sample received with inadequate chemical preservation, but preserved by the laboratory
Q6	Sample was received above recommended temperature
Q7	Sample inadequately dechlorinated
Q8	Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155
Q9	Insufficient sample received to meet method QC requirements
Q10	Sample received in inappropriate sample container
Q11	Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices
Duplicates	
R1	RPD exceeded the method control limit. See case narrative
R2	RPD exceeded the laboratory control limit. See case narrative
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria
R5	MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance

	criteria
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria
R7	LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria
R8	Sample RPD exceeded the method control limit
R9	Sample RPD exceeded the laboratory control limit
R10	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems
R11	The RFD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used
Surrogates	
S1	Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits
S3	Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample
S4	Surrogate recovery was above laboratory method acceptance limits. No target analytes were detected in the sample
S5	Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits
S6	Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect
S7	Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect
S8	The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable
S10	Surrogate recovery was above laboratory and method acceptance limits. See case narrative
S11	Surrogate recovery was high. Data reported per ADEQ policy 154.000
S12	Surrogate recovery was low. Data reported per ADEQ policy 154.000

Method/Analyte Discrepancies	
T1	Method approved by EPA, but not yet licensed by ADHS.
T2	Cited ADHS licensed method does not contain this analyte as part of method compound list
T3	Method not promulgated either by EPA or ADHS
T4	Tentatively identified compound. Concentration is estimated and based on the closest internal standard
Calibration Verification	
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample
V2	CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample
V3	CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative
V4	CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample
V5	CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B
V6	Data reported from one-point calibration criteria per ADEQ policy 155.000
V7	Calibration verification recovery was above the method control limit for this analyte, however, the average % difference or % drift for al the analytes met method criteria
V8	Calibration verification recovery was below the method control limit for this analyte, however the aver % difference or the % drift for all the analytes met method criteria
Calibration	
W1	The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA Method 8000B
W2	The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C

APPENDIX C

PERFORMANCE EVALUATION SAMPLE CERTIFIED RESULTS

ERA

A Waters Company

September 14, 2012

Laura Menken
AMEC Environmental & Infrastructure
4600 E. Washington St, ste 600
Phoenix, AZ 85034

Dear Laura:

Enclosed please find the certification documentation for the whole volume performance evaluation samples that you recently ordered. The samples were shipped on September 11, 2012 via FedEx Priority Overnight service to your attention. The ERA project number corresponding to these samples is 0810-12-03.

Thank you for choosing ERA for this project. If you have any questions or if we can be of any further assistance please do not hesitate to call.

Sincerely,

Chad Lane
Chemist

Account No. A796023

Catalog No. 093 Custom Standard **Sample ID # 0810-12-03**

Volatiles by 8260B

Parameter	Certified Value (µg/L)	Performance Acceptance Limits™ (µg/L)
Carbon tetrachloride	7.51	4.87 - 9.40
Tetrachloroethylene	7.20	4.54 - 8.62
Trichloroethylene	7.27	5.38 - 8.72

Standard Preparation Instructions: None required. This sample is ready for preparation and analysis as received.

Preservative: HCl.

The **Certified Values** are equal to 100% of the "made to" values as determined by volumetric and/or gravimetric measurements used during the manufacture of this product.

The ***Performance Acceptance Limits (PALs™)*** are listed as guidelines for acceptable analytical results given the limitations of the USEPA methodologies commonly used to determine these parameters and closely approximate the 95% confidence interval. The ***PALs™*** are based on analytical verification data generated by ERA, independent referee laboratory results and data from USEPA methods, WP, WS and CLP interlaboratory studies. Recovery and advisory range data for these studies are based on ERA's normal manufacturing ranges. **The *PALs™* listed for this project may not be applicable since the analyte concentrations are outside of ERA's normal manufacturing ranges and a linear relationship to the concentration listed has not been established.** If your result falls outside of the ***PALs™***, ERA recommends that you investigate potential sources of error in your preparation and/or analytical procedures. For further technical assistance, call ERA at 1-800-372-0122.

LABORATORY CORRECTIVE ACTION REPORTS AND PE SAMPLE RESULT INVESTIGATIONS

Hoyt, Marilyn P

From: Spencer, Melissa [Melissa.Spencer@testamericainc.com]
Sent: Thursday, December 13, 2012 6:20 PM
To: Hoyt, Marilyn P
Cc: Judith.Heywood@aps.com; Menken, Laura; Emily, Kylie; Kusma, Shawn; Penfold, Larry
Subject: TestAmerica response to data validation questions
Attachments: Corrective Action Report #18085.pdf; Corrective Action for logbook documentation error.pdf; Daily Log Summary - sample IDs corrected.pdf; Corrective Action Report #18083.pdf; Analyst documentation of ID confirmation.pdf; Revised COC PVI0717.pdf

Dear Marilyn,

During a conference call that you had with Kylie Emily on 12/11/12 you brought up some issues that you found with the data package for TestAmerica work order PVI0717. The issues and our responses to them are as follows:

- ***The daily log summary for GC/MS 2 from 09/14/12 listed samples PVI0714-04 through -09 for data files named 09141214 through 19 but the Instrument Injection Log listed samples PVI0717-04 through -09 for those data files.***

  This was an analyst transcription error and was an oversight by the second level reviewer. Samples PVI0714-04 through -09 do not exist in Element therefore we have concluded that the injection log was correct. As a corrective action for this issue an email was sent to all Volatiles analysts as a reminder to double-check that the injection log and daily run log match. See the attached documents "Corrective Action Report #18085", "Corrective Action for logbook documentation error" and "Daily Log Summary - sample IDs corrected" for more information.

- ***The Chain of Custody indicated that samples with client IDs MW6S-091212-A and MW6S-091212-B had the LIMS ID PVI0717-03. The Final Report indicated that MW6S-091212-A was PVI0717-03 and MW6S-091212-B was PVI0717-10. It was explained that the log-in error was caught and fixed in the LIMS but no documentation of this could be found.***

  This was due to Project Manager oversight. The appropriate steps were taken to fix the mistake but the documentation was not completed. After you notified us about the oversight the Chain of Custody was fixed and rescanned into the folder containing PDF COCs and the analyst that had originally verified the client IDs with the Project Manager after the error was discovered documented this in the daily log summary for the day sample PVI0717-03 was analyzed. Also, a corrective action report was written to document the discrepancy, the causes and corrective actions taken. See the attached documents "Corrective Action Report #18083", "Analyst documentation of ID confirmation" and "Revised COC PVI0717" for more information.

- ***The blind Proficiency sample (PVI0717-06) results were outside of the acceptance range for Trichlorethylene.***

  An investigation into the possible causes for the unacceptable Proficiency sample results was started on 12/12/12. The steps in the investigation are as follows:

  - All associated batch QC and the calibration were examined and no obvious problems were discovered.
  - A review of our proficiency testing results for 8260 analysis over the last two years showed that we had no unacceptable results for Trichlorethylene.
  - A few members of the TestAmerica Tech Contacts group communicated with me about possible sources of the issue. The possibilities were investigated and discarded as not applicable or very unlikely.
  - I spoke with Chad Lane from ERA on 12/12/12 about their Proficiency Sample preparation process as this can have impact on the validity of the proficiency sample.

- The two unopened vials of sample PVI0717-06 were found to still be under refrigerated storage conditions. One of the vials will be re-analyzed and the other vial is being shipped to the TestAmerica Denver laboratory for analysis there. A comparison of the results from the two labs will hopefully be completed by 12/21/12.
- A known Proficiency sample for 8260 will be ordered on 12/14/12 and will be analyzed by 12/28/12.

When the investigation of the unacceptable proficiency sample result is finished I will email you with a summary of our findings. I expect to have this completed by 01/04/12.

If you have any questions or would like to discuss any of these items further please feel free to contact me directly.

Thanks,
Melissa

INTERNAL CORRECTIVE ACTION REPORT #18,083

Date Entered: 12/13/2012 8:58:38 AM
Entered By: Kylie Emily
Employee:
Department: Project Management

Instrument: NONE

Status: PM Review
Client Complaint: [X] Follow Up: [ ]
Internal Audit: [ ] PT Sample: [ ]
CAR Type: Internal
Date of Occurrence: 12/13/2012

ISSUE

Level II - Client Complaint

Two different client samples were logged into the Laboratory Information Management System (LIMS) as one sample. The mistake was caught and fixed in the LIMS but there was no documentation of the process and the chain of custody was not corrected. The client questioned why the LIMS sample IDs listed on the chain of custody did not match the final report. When it was explained the client questioned why there was no documentation of the changes.

ISSUE CAUSE

Employee Oversight

See Employee oversight section for the cause of the sample receiving log-in error.

The mistake was not noticed in the initial log-in review. The PM caught the error a few days later and verified with the lab which VOA vial had been analyzed. The VOA vial with enough sample volume removed for analysis of the sample and the MS/MSD was client ID MW6S-091212-A. The sample that had not been analyzed, client ID MW6S-091212-B was logged in as sample -10 and all VOA vials were labeled as PVI0717-10. The PM forgot to document the changes to the LIMS IDs and the reason why on the chain of custody.

EMPLOYEE OVERSIGHT

Basic oversight

The employee who logged the samples in the LIMS did not notice the letter at the end of the client ID was different and assumed the sample name had been written twice because there were extra VOA vials for analyzing the MS/MSD. The employee who performed the initial log-in review also overlooked the different IDs.

INTERNAL CORRECTIVE ACTION

Other (see description)

The QA manager and the analyst reconfirmed the labeling of the VOA vials on 12/13/12. The sample with the client ID MW6S-091212-A was labeled as PVI0717-03. The sample with client ID MW6S-091212-B was labeled as PVI0717-10.

In the future the PM will note all corrections to log-in errors related to the LIMS IDs on the chain of custody and scan the revised version of it into the system. Further explanation of the changes that are made will be documented in the folder for the Work Order or in the LIMS.

RESOLUTION

Date Resolved:

Data not flagged. For internal documentation. See Internal Corrective Action page for additional discussion.

INTERNAL CORRECTIVE ACTION REPORT #18,085

Date Entered: 12/13/2012 9:42:37 AM
Entered By: Shawn Kusma
Employee: Shawn Kusma
Department: GCMS Volatiles

Instrument: GCMS2

Status: PM Review
Client Complaint: ☐ Follow Up: ☐
Internal Audit: ☐ PT Sample: ☐
CAR Type: Internal
Date of Occurrence: 09/14/2012

ISSUE

Documentation missing or incorrect
The incorrect work order (PVI0714) is documented in the hand-written sequence log - the electronic version has the correct work order (PVI0717).

ISSUE CAUSE

Employee Oversight

EMPLOYEE OVERSIGHT

Basic oversight
The analyst and the data reviewer missed the incorrect work order number that was listed for PVI0717-04 to -09 in the Daily Log Summary. In the log it is listed as PVI0714-04 to -09. The correct work order (PVI0717) is provided in the electronic Injection Log.

INTERNAL CORRECTIVE ACTION

Other (see description)
The correct work order has been added in the Daily Log Summary with date and initial for the correction. In addition, an e-mail has been sent to the department as a reminder to follow proper procedures in reviewing log book entries.

PVI0714 has only two samples associated with the work order. PVI0714-01 submitted with a 500ml Poly w/HNO3 for ICPMS analysis and PVI0714-02 submitted with a Bacti Bottle for Total Coliform analysis. Therefore, it is not possible to analyze PVI0714-04 to -09 for 8260 analysis.

RESOLUTION

Date Resolved:

Data not flagged. For internal documentation. See Internal Corrective Action page for additional discussion.

Subject: RE: TestAmerica response to data validation questions
Attachments: Results comparison PVI0717-06.xls; QC sample PVL1328.xls

Hi Laura and Marilyn,

Attached are result summaries from the re-analysis of blind proficiency sample PVI0717-06 as well as the analysis of a QC sample we purchased from Phenova. The analyst was instructed to prepare and analyze the QC sample two times. The first preparation was done using 1/10th of the amount described in the instructions and the second preparation was done using half of the amount described in the instructions. The dilutions were performed so that the concentration levels of Trichloroethylene, Tetrachloroethylene and Carbon Tetrachloride would be similar to the levels found in sample PVI0717-06. The Trichloroethylene results in both the QC sample from Phenova as well as the re-analysis of PVI0717-06 were well within the acceptance ranges.

No evidence of systematic low bias was found during the investigation of the Trichloroethylene result that was outside the ERA performance limits range. As stated in my previous email there were no problems with the associated QC or calibration and no trends were found in our PT results over the last two years. Upon completion of this investigation the most likely explanation for the unacceptable Trichloroethylene result appears to be that it was an anomaly. In order to ensure that this is the case we will continue to monitor the situation.

Please let me know if you have any questions or would like any additional information.

Kind regards,
Melissa

Melissa Spencer

Hi Melissa and Kylie. I hope you had a great holiday.

I wanted to check in on the results and reporting of the proficiency sample results. Are we on track to receive results tomorrow as planned?

Subject: TestAmerica response to data validation questions

Dear Marilyn,

During a conference call that you had with Kylie Emily on 12/11/12 you brought up some issues that you found with the data package for TestAmerica work order PVI0717. The issues and our responses to them are as follows:

- ***The daily log summary for GC/MS 2 from 09/14/12 listed samples PVI0714-04 through -09 for data files named 09141214 through 19 but the Instrument Injection Log listed samples PVI0717-04 through -09 for those data files.***

  This was an analyst transcription error and was an oversight by the second level reviewer. Samples PVI0714-04 through -09 do not exist in Element therefore we have concluded that the injection log was correct. As a corrective action for this issue an email was sent to all Volatiles analysts as a reminder to double-check that the injection log and daily run log match. See the attached documents "Corrective Action Report #18085", "Corrective Action for logbook documentation error" and "Daily Log Summary - sample IDs corrected" for more information.

- ***The Chain of Custody indicated that samples with client IDs MW6S-091212-A and MW6S-091212-B had the LIMS ID PVI0717-03. The Final Report indicated that MW6S-091212-A was PVI0717-03 and MW6S-091212-B was PVI0717-10. It was explained that the log-in error was caught and fixed in the LIMS but no documentation of this could be found.***

  This was due to Project Manager oversight. The appropriate steps were taken to fix the mistake but the documentation was not completed. After you notified us about the oversight the Chain of Custody was fixed and rescanned into the folder containing PDF COCs and the analyst that had originally verified the client IDs with the Project Manager after the error was discovered documented this in the daily log summary for the day sample PVI0717-03 was analyzed. Also, a corrective action report was written to document the discrepancy, the causes and corrective actions taken. See the attached documents "Corrective Action Report #18083", "Analyst documentation of ID confirmation" and "Revised COC PVI0717" for more information.

- ***The blind Proficiency sample (PVI0717-06) results were outside of the acceptance range for Trichlorethylene.***

  An investigation into the possible causes for the unacceptable Proficiency sample results was started on 12/12/12. The steps in the investigation are as follows:

- All associated batch QC and the calibration were examined and no obvious problems were discovered.
- A review of our proficiency testing results for 8260 analysis over the last two years showed that we had no unacceptable results for Trichlorethylene.
- A few members of the TestAmerica Tech Contacts group communicated with me about possible sources of the issue. The possibilities were investigated and discarded as not applicable or very unlikely.
- I spoke with Chad Lane from ERA on 12/12/12 about their Proficiency Sample preparation process as this can have impact on the validity of the proficiency sample.
- The two unopened vials of sample PVI0717-06 were found to still be under refrigerated storage conditions. One of the vials will be re-analyzed and the other vial is being shipped to the TestAmerica Denver laboratory for analysis there. A comparison of the results from the two labs will hopefully be completed by 12/21/12.
- A known Proficiency sample for 8260 will be ordered on 12/14/12 and will be analyzed by 12/28/12.

When the investigation of the unacceptable proficiency sample result is finished I will email you with a summary of our findings. I expect to have this completed by 01/04/12.

If you have any questions or would like to discuss any of these items further please feel free to contact me directly.

Thanks,
Melissa
