Erica,

Thank you for the great photos – they will come in handy.

I see the company sign in one of the photos and it reminds me of the results I saw this morning from some of the samples we have from the Fayetteville area.

The high resolution MS doing nontargeted analysis is showing dozens and dozens of new previously unknown PFAS from the fluorochemical plant and in delivered drinking water from this part of North Carolina. It is truly scary to see so many weird chemicals in municipal drinking water.

I suspect that we'll see something similar with the NJ samples. Many previously unreported PFAS. The new generation of analytical instrumentation is as impressive as the results are disquieting.

You all have been working very hard to pull this off. Field work is tough.

Thanks very much for all your efforts!

Andy

Some sampling photos taken on Oct 23 by DRBC – tidal creek sampling. Looks like these were taken in Carney's Point Twp, near DuPont (now Chemours). There's a lot of wetland areas along the Delaware River in that part of southern NJ, from Solvay all the way down to DuPont.
