Efforts to Reduce the Volume and Toxicity of the Waste Generated:

This waste is hazardous by application of 40 CFR 261.3(c)(2)(i). The sludge generated from our facility contains 40% – 65% silica and calcium, which are necessary raw materials for cement manufacturing. The St. Mary's facility uses this material as a raw material in their cement manufacturing process. Therefore, the material has a beneficial use as opposed to land filling.

Efforts to reduce the volume of the originally generated wastes prior to incineration are reported in the facility Hazardous Waste Reduction Plan that will be updated by July 1, 2015 in accordance with New York regulations and the facility Hazardous Waste Management Permit. Data is not available prior to 1984 for comparison.

Certification:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

Please feel free to contact me at 518-233-5204 if you have any questions.

Sincerely,

Brian C. Hupe
