Thanks Danelle, I'll send them to Paul. Also - I think I mentioned I'll be on vacation after today (7/29/13 -8/6/13 is current plan).

I had a chat with Carole Braverman here yesterday about the recent E. Liverpool public meetings, how they went etc. All the disconnects we observed makes me think that the most fruitful part of the project will probably be the papers now being written. And given the cast of characters, the path to those may be a little crooked too.

Hi George,

It should not be a problem. Attached are the two files I used to create the PDF.

Hi Danelle – I'm guessing it's okay to send Paul the files he asks for (we can talk about the irony of that sometime), but wanted to check with you to be sure. I think these files are attached to your Mon 7/1/2013 1:54 PM email. Let me know what you think. thanks

George, had fun on call today. Is it possible to send me original powerpoint slide of the East Liverpool presentation please? We do not have ability to change Adobe files here. I may be presenting a short presentation here on the results and I would take about ½ of the slides out (plus need shorter presentation for October if we have to do that). Thanks in advance…PK

Thank you to Kristie and George for sharing these websites!

From Kristie Ellickson:

These two website have shown up in public comments and in data gathering efforts in general. They provide data from (we think) the NEI (areavibes) and the EPA air quality system data. You may search by zipcode, or town and the results are nice looking graphs and tables that imply there are very local data to that area. The websites aren't cited well, and pull lots of government data that are not as spatial resolved as is implied. In USA.com there must be some mechanism to eliminate

monitors very far from a monitoring site because there are data presented for Mankato, MN (a smaller urban MN city), but not for Benedict, MN (a 1 small store town). Neither have specific monitors however. So, just be aware of these sites.
www.Areavibes.com
www.Usa.com

The webinars that we have had the opportunity to watch recently are by Dr. Helsel from Practical Stats. They are very useful and highly recommended from our group. The website is www.praticalstats.com. He will provide face to face training at specified locations (see website), and I have heard that he will come to your organization to provide onsite training for a fee (obviously on site fee is much larger). At the very least, sign up for the newsletters.
