Thanks for the kind wishes, Hanh. After our call yesterday, I went back into my hard drive and found what Tim had written up. It is as you note below. Question: since the ELG right now has discharge standards for drilling fluids and cuttings, do you have any characterization data for the Furie exploration wells? I assume that they demonstrated compliance with the ELG somehow. I'm interested in trying to get a sense of what pollutant loadings to the Inlet were like.

Ahmar

Subject: Cook Inlet discharge data

Hi Ahmar,

Thank you for your continuing efforts to work with the region on the Coastal ELG exemption issues. Looking at the information Tim developed in response to your questions 1-4 from earlier this year, it appears that the volumes of drilling fluids and drill cuttings from the four exploration wells recently drilled are summarized in the last table. I am resending you the info in the attached.

I will compile the traditional knowledge, contaminant/discharge studies, fish consumption data, etc. I hope to send it to you before the end of the year.

I hope you and your family have a wonderful holiday season.

Hanh
