Re: PCB Remediation Completion Report
Grayson and Field Houses Window and Door Replacement Project
Orchard Hill Residential Area
University of Massachusetts – Amherst Campus

Dear Ms. Tisa:

On behalf of the University of Massachusetts (UMass), please find attached a Polychlorinated Biphenyl (PCB) Remediation Completion Report and a Monitoring and Maintenance Implementation Plan (MMIP) prepared in accordance with the U.S. Environmental Protection Agency's (EPA's) April 30, 2012 PCB Decontamination and Disposal Approval under 40 CFR 761.61(c), and 79(h) for the Grayson and Field Houses located within the Orchard Hill Complex located at 141 Orchard Hill Drive on the UMass Campus in Amherst, Massachusetts.

PCB Remediation activities associated with the building wide window and door replacement project were conducted during the summer break periods in 2012 and 2013 and post-abatement indoor air monitoring was conducted in October 2013 as per Condition 14 of the Approval.

This work involved the removal and off-site disposal of PCB caulk and glazing sealants along with associated window/door frames and other materials as ≥ 50 parts per million (ppm) PCB wastes; and the encapsulation/in-place management of residual levels of PCBs on the building substrates (masonry).

As specified in the Approval conditions, the Notification and Approval did not address the cleanup of any PCB-impacted soils as the nature and extent has not been defined. The proposed plan to address any PCB-impacted ground surfaces adjacent to the Grayson and Field Houses as well as the Webster House (window and door replacement project conducted in 2011) is to assess and remediate, if necessary, surfaces adjacent to the three buildings as a single event. This will allow the remediation contractor access to the three buildings during the same mobilization and completion of the ground surfaces work surrounding the buildings as one removal project. At this time, UMass is evaluating potential schedules for these activities.

If you have any comments, questions, or require further information, please do not hesitate to contact me at the number listed above.

Sincerely,

WOODARD & CURRAN INC.

1. INTRODUCTION

This Polychlorinated Biphenyl (PCB) Remediation Completion Report has been prepared by Woodard & Curran on behalf of the University of Massachusetts (UMass) to comply with the requirements set forth in the U.S. Environmental Protection Agency's (EPA) April 30, 2012 PCB Decontamination and Disposal Approval under 40 CFR 761.61(c) and 761.79(h) (the Approval) for the subject work.

This report documents PCB remediation activities conducted in 2012 and 2013 at the Grayson and Field Houses within the Orchard Hill Residential Complex on the UMass campus in Amherst, Massachusetts (Figure 1-1).

1.1 SITE DESCRIPTION

The Orchard Hill Residential Area was constructed in 1964 and 1965 and includes four residential dormitories for undergraduate students. The Grayson and Field Houses are located on the eastern side of the complex and were the first of the buildings constructed in 1964 (see Figure 1-1). The buildings are constructed as a single structure with a stairway separating the two buildings. The buildings are of similar construction including seven stories with dormitories on the second through seventh floors and common areas and meeting rooms on the first floors. The Grayson and Field Houses have a total footprint of approximately 22,000 square feet.

The Orchard Hill Residential Area is surrounded by other dormitory buildings, parking areas, and open areas. Surrounding ground surfaces are generally flat or slightly sloped toward the building to the east and are either covered with grass, asphalt pavement, concrete, or landscaped areas.

1.2 SITE BACKGROUND / CONCEPTUAL SITE MODEL

The Grayson and Field Houses were constructed during a time period when PCBs were sometimes used in certain building materials (i.e. caulking). In preparation for a window and door replacement project, a materials survey was conducted of various hazardous materials that would be encountered during the project. This included inspection and sampling of buildings materials considered suspect for PCBs.

Analytical results indicated that certain caulking materials contained PCBs at concentrations greater than 50 parts per million (ppm), at concentrations up to 302,000 ppm. Adjacent building materials were also sampled to determine whether PCBs had migrated from the caulking into these adjacent materials and the characterization data confirmed that detectable concentrations of PCBs were present in certain adjacent materials at regulated concentrations. After completing the characterization of suspect materials, the results were used to develop a remedial approach that was incorporated into the overall project as presented in the Notification[1] and subsequently approved by EPA on April 30, 2012.

1.3 SUBMITTALS AND PROJECT TIMELINE

The following list provides a summary of the major activities conducted and document submittals prepared as part of the remediation activities. It should be noted that characterization sampling was conducted throughout the program in support of these submittals. Copies of EPA's Approval and other select submittals are provided in Appendix A.

[1] The Notification was prepared by Woodard & Curran on behalf of UMass to satisfy the requirements under 40 CFR 761.61(c) and 761.79(h). Information was submitted dated January 2012 (PCB Remediation Plan); January 30, 2012 (Remediation Plan Addendum/Clarification); February 6, 2012 (Response to Comments); April 24, 2012 (clarification on stairwell verification sampling); April 27, 2012 (Woodard & Curran telephone discussion with EPA on encapsulation and Webster House verification sampling data); and July 12, 2013 (PCB Remediation Plan Modification Request). These submittals are referred to as the "Notification".

- Initial Site Inspection and Caulking Sample Collection – August 2011;
- PCB Remediation Plan submitted to EPA – January 6, 2012;
- PCB Remediation Plan Addendum/Clarification – January 30, 2012;
- Additional Clarification/Response to Questions – February 6, 2012;
- Receipt of EPA Approval – April 30, 2012;
- Phase 1 Remediation Activities Conducted – May through August 2012;
- PCB Remediation Plan Modification Request submitted to EPA – July 12, 2013 (comments/response not received from EPA to date); and
- Phase 2 Remediation Activities Conducted – May through August 2013.

1.4 PROJECT TEAM

The remediation project team consists of the following parties:

- University of Massachusetts Amherst - Owner
- Woodard & Curran – PCB Remediation Consultant
- CBI Consulting, Inc. – Project Manager/Architect
- GVW, Inc. – General Contractor
- MJ Environmental (MJE) – PCB Remediation Contractor (Phase 1 activities)
- Compass Restoration – PCB Remediation Subcontractor (Phase 2 activities)
- Con-Test Analytical Laboratory – Laboratory for sample analysis

2. WINDOW AND DOOR REPLACEMENT PROJECT IMPLEMENTATION

This section describes the PCB cleanup and disposal activities conducted at the Grayson and Field Houses in accordance with the Notification and requirements of 40 CFR 761. Active remediation activities on the building (removals and encapsulations) were conducted in two phases during the summer break sessions of the University (between May and August of 2012 and May and August 2013, respectively).

2.1 REMEDIATION OVERVIEW

Several types of windows and doors at Grayson House and Field House were found to contain ≥ 50 ppm PCB caulking and/or glazing sealants as described in the Notification. The remedial approach consisted of the following:

- Removal and off-site disposal of ≥ 50 ppm PCB caulking, glazing sealants, and backing materials in direct contact with caulking as ≥ 50 ppm PCB waste;
- Removal and off-site disposal of window and door frames and components (including glass) in direct contact with ≥ 50 ppm PCB caulking and glazing sealants as ≥ 50 ppm PCB waste; and
- Encapsulation of certain building materials that were scheduled to remain in place containing PCBs above the high or low occupancy clean up levels for PCB remediation wastes, as applicable.

Following removal of caulking, frames, and components, bulk verification samples were collected from the building materials formerly in direct contact with the caulking to determine if residual PCB impacts > 1 ppm were present in the materials. Given the overall project schedule and sequence, encapsulating coatings were applied to the substrate immediately after sample collection and prior to receipt of the results. The subsequent bulk sample results were used to establish the requirements for long term monitoring (i.e., materials identified as containing PCBs > 1 ppm would be included in the long term monitoring and maintenance program as described in Section 6). Based on the overall project schedule, verification samples were also collected at varying distances from the caulked joints to verify the required extent of encapsulation if results from the direct contact samples indicted that PCBs were present at concentrations > 1 ppm. Adjacent material samples were collected and placed on hold with the laboratory pending results of the former direct contact samples.

Following removal of the windows and the collection of the building material verification samples, the epoxy coating was immediately applied to allow for the installation of the replacement windows as quickly as possible (i.e., two coats of epoxy coating were installed on building materials formerly in direct contact with the caulked joints and to the distances specified in the PCB remediation plan without consideration to the results of the verification sampling). Following application of the second coat, the epoxy was allowed to cure overnight and verification wipe samples were collected in accordance with the Approval. Following collection of the verification wipe samples, the replacement windows were installed in accordance with the overall project schedule.

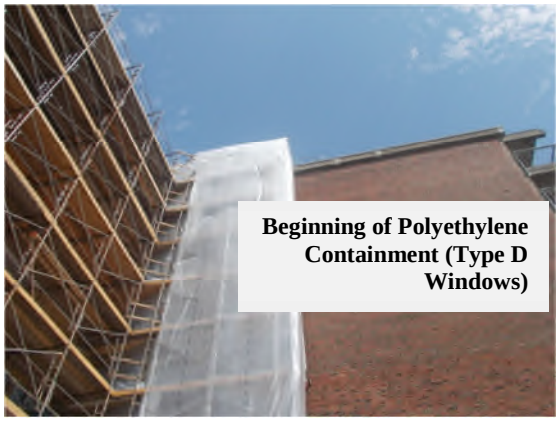
As described in the Notification and acknowledged in the Approval, certain glazing sealants and caulking, were managed for off-site disposal as excluded PCB products as defined in 40 CFR 761.3 as well as asbestos containing materials.

A detailed summary of the remediation activities, including site preparations and controls, PCB-impacted material removal and encapsulation, inspections and verification sampling, and off-site disposal of materials is presented in the following sections.

2.2 SITE PREPARATION AND CONTROLS

Prior to initiating the remediation activities, site preparations and controls were implemented and maintained for the duration of the project in accordance with the PCB Remediation Plan and the Contractor Work Plans. Containments and site controls were established as follows:

- Polyethylene sheeting containments were constructed on the interior of the building at each work area prior to work;
- Exterior to the building a single containment was constructed around the scaffolding spanning all floors within a single work area (i.e., set of windows);
- Negative pressure controls with HEPA filtration were established within each containment;
- Access to the active work areas was through a single access point on the ground floor and controlled by the on-site supervisor; and
- At the conclusion of each work day or following completion of work within an area, the work area, tools, and equipment were decontaminated by vacuuming and wiping of the equipment using diesel or hexane soaked rags.



In accordance with the PCB Remediation Plan, dust monitoring was conducted during active dust-generating activities such as the saw cutting of the stucco overhang ceiling materials (conducted in 2013). To evaluate the dust controls being implemented during other activities such as window removal, perimeter dust monitoring was also conducted periodically by Woodard & Curran. No dust readings above the project action limit were noted during monitoring. A summary of the dust monitoring readings is provided in Appendix B.

2.3 VERIFICATION SAMPLING AND ANALYTICAL METHODS

Verification samples collected in support of the remediation activities described herein were collected in accordance with generally accepted procedures for environmental sampling. Masonry samples were collected consistent with the EPA Region I Standard Operating Procedure for Sampling Porous Surfaces for PCBs (May 2011). Surface wipe samples were collected using hexane-saturated gauze wipes in accordance with the standard wipe test method under 40 CFR 761.123.

Samples were transferred on ice to Con-Test Analytical Laboratory of East Longmeadow, Massachusetts under standard chain of custody procedures. Samples were extracted using USEPA Method 3540C (Soxhlet extraction) and analyzed for PCBs using USEPA Method 8082.

A summary of the analytical results are presented on Tables 2-1 and 2-2 and are further described in the sections below. Locations of the samples are depicted on drawings included in Appendix C. The complete analytical laboratory reports are provided in Appendix D.

2.4 WEST ELEVATION STOREFRONT WINDOWS AND DOORS (TYPE N-02)

Storefront windows and doors on the first floor west elevation of the Grayson and Field Houses contained ≥ 50 ppm PCB exterior perimeter caulking and glazing sealants (up to 200 ppm). Caulking and glazing sealants were also identified as asbestos containing materials (ACM). A summary of the removal and verification program is provided below.

West Elevation Storefront Windows

2.4.1 Caulking and Window/Door Removal

Following the establishment of site controls as described above, window/door caulking, glazing sealants, and frames and

components were removed using hand tools and/or power tools equipped with HEPA filtration for off-site disposal as ≥ 50 ppm PCB and asbestos waste (i.e., no segregation of materials). Window frames and components larger than four feet in any dimension were reduced in size for disposal facility acceptance. All materials were double wrapped in polyethylene sheeting and transported at the conclusion of each work day to the on-site waste storage area.

After removal of the caulking and window/doors, adjacent materials in former direct contact with the caulking were addressed as described below. The stucco overhang ceiling on the west side of the buildings was removed for off-site disposal as described in Section 2.4.2 (no stucco overhang was present on the east side of the buildings), and adjacent building materials scheduled to remain in place were subject to verification sampling and encapsulation as described in Section 2.4.3.

2.4.2 Stucco Overhang Ceiling Verification Sampling and Removal

In accordance with the PCB Remediation Plan, six verification samples were collected from the stucco ceiling materials adjacent to the first floor storefront windows and doors at a frequency of one sample per 50 linear feet (l.f.) of caulked joints at a distance of five inches from the caulked joints. Analytical results indicated that PCBs were either non-detect (three samples at < 0.099 ppm) or present at concentrations < 1 ppm (three samples with reported concentrations of 0.10, 0.11, and 0.15 ppm). Refer to Table 2-1 for a summary of results and Appendix C for sample location drawings.

Based on these results, stucco ceiling materials within five inches of the caulked joints were removed for off-site disposal as ≥ 50 ppm PCB and ACM wastes. The stucco ceiling was removed by saw cutting in full containment with negative pressure controls. The rotary saw was equipped with HEPA filtration and wet techniques were utilized to minimize dust generation. The remaining portions of the stucco ceiling (beyond five inches from the caulked joint) were removed for off-site disposal as ACM waste.

2.4.3 Building Material Verification Sampling

Following removal of caulking, frames, and components, bulk verification samples were collected from the concrete foundation walls and slate building materials in former direct contact with the caulking in accordance with the Approval. A summary of the sampling results is as follows:

- Concrete Foundation (144 l.f. – Verification samples were collected at a frequency of one sample per 50 l.f. for a total of three samples. Analytical results indicated that PCBs were non-detect (< 0.098 ppm) or present at concentrations of 0.16 and 0.24 ppm; and
- Vertical Slate (22 l.f.) – One verification sample was collected from each building for a total of two samples. Analytical results indicated that PCBs were non-detect in both samples (< 0.099 ppm).

Based on these results, residual PCBs > 1 ppm were not present in concrete or slate building materials associated with the west elevation storefront windows and doors; therefore, no samples of adjacent materials beyond the direct contact surfaces were analyzed and although epoxy encapsulation was applied to the former direct contact areas, these building materials are not subject to long term monitoring and maintenance activities.

A summary of the analytical results is presented on Table 2-1. Sample locations are depicted on drawings provided in Appendix C.

2.5 EAST ELEVATION STOREFRONT WINDOWS (TYPE N-02)

Interior caulking along two vertical storefront window frame to concrete masonry unit (CMU) block walls at the east elevation of the Field House contained PCBs ≥ 50 ppm (75 ppm). A summary of the removal and verification program is provided below.

2.5.1 Caulking and Window Removal

Following the establishment of site controls as described above, window caulking and frames and components in direct contact with the caulking were removed using hand tools and/or power tools equipped with HEPA filtration for off-site disposal as ≥ 50 ppm PCB and asbestos waste. Consistent with the Notification and Approval, the remaining portions of the window frames were removed for off-site disposal as asbestos waste with < 50 ppm PCBs (as an Excluded PCB Product). All materials were double wrapped in polyethylene sheeting and transported at the conclusion of each work day to the on-site waste storage area.

2.5.2 Building Material Verification Sampling

Following removal of the caulking and window frames, verification samples were collected in accordance with the Approval. One verification sample was collected from CMU block materials formerly in direct contact with the caulked joints (total of 18 l.f. of caulking). Analytical results indicated that PCBs were non-detect (< 0.10 ppm) in the sample collected.

Based on this result, residual PCBs > 1 ppm were not present in CMU block materials associated with the east elevation storefront windows. Therefore, no samples of adjacent materials beyond the direct contact surfaces were analyzed and although epoxy encapsulation was applied to the former direct contact areas, these building materials are not subject to long term monitoring and maintenance activities. A summary of the analytical results is presented on Table 2-1. Sample locations are depicted on drawings provided in Appendix C.

2.6 ELEVATOR HALL WINDOWS (TYPE D)

Elevator hall windows, identified as Type D windows on the project drawings, are present on each side of the elevator halls in the Grayson and Field Houses from the second through seventh floors for a total of 48 windows (four banks of six pairs of windows in two buildings). Windows located in the elevator halls were identified as containing PCBs ≥ 50 ppm on the following joints: interior upper horizontal metal window frame to CMU wall joints (288 l.f. with 400 ppm PCBs); interior vertical metal frame to metal frame joints (144 l.f. with up to 140,000 ppm PCBs); and exterior expansion joints (43.5 l.f. per joint with up to 302,000 ppm PCBs) runs in a continuous bead from the bottom of the second floor to the top of the building along exterior metal to metal joints of the Type D elevator hall windows [144 l.f.] and concrete to concrete expansion joints on the concrete spans between each floor [30 l.f.]. Caulking and glazing sealants were also identified as ACM. A summary of the removal and verification program is provided below.

Typical Elevator Hall Window

2.6.1 Caulking and Window Removal

Following the establishment of site controls as described above, window caulking and frames and components in direct contact with the caulking were removed using hand tools and/or power tools equipped with HEPA filtration for off-site disposal as ≥ 50 ppm PCB and asbestos waste. Consistent with the Notification and Approval, the remaining portions of the window frames were removed for off-site disposal as asbestos waste with < 50 ppm PCBs (as an

Excluded PCB Product). All materials were double wrapped in polyethylene sheeting and transported at the conclusion of each work day to the on-site waste storage area.

2.6.2 Building Material Verification Sampling

Following removal of the caulking and window frames, verification samples were collected in accordance with the Approval. A summary of the analytical results is presented on Table 2-1. Sample locations are depicted on figures provided in Appendix C. Summaries of the samples collected are presented below.

Interior Building Materials

One verification sample was collected from CMU block materials formerly in direct contact with the interior caulking on each floor (for a total of six samples and a sampling frequency of approximately one sample per 50 l.f. of caulking [288 l.f.]). Analytical results were as follows:

- Total PCBs were reported as non-detect (2 samples at < 0.10 ppm) or < 1 ppm (3 samples with reported concentrations of 0.16, 0.19, and 0.24 ppm); and
- Total PCBs were reported as > 1 ppm in one sample collected from the sixth floor in the Grayson House with a reported concentration of 1.8 ppm.

Based on the sample collection frequency, the PCB > 1 ppm result was applied to the sixth floor CMU block materials away from the former caulking joints in both Grayson and Field Houses. To verify the extent of PCBs > 1 ppm (and the required extent of encapsulation), the adjacent material sample collected from the sixth floor CMU block wall in the Grayson House was released for analysis. Total PCBs were reported at a concentration of 0.7 ppm in concrete ceiling materials immediately beyond the wall to ceiling joint (i.e., approximately 15 inches above the former caulked joint).

Based on these results, liquid coatings were applied to interior CMU block materials formerly in direct contact with the caulking and beyond the joint to a distance of approximately 15 inches above the elevator lobby windows in the two sixth floor lobbies (Grayson and Field). Additional information is presented in Section 2.6.3.

Exterior Building Materials

As described in the Notification, based on the reported concentrations of PCBs in the exterior expansion joint caulking (302,000 and 296,000 ppm), building materials within the return of the concrete expansion joints were assumed to contain residual PCBs above the applicable clean up criteria and no direct contact samples collected. Building material samples were collected from areas away from the caulked joint to confirm the extent of PCB impacts > 25 ppm (the low-occupancy clean up criteria as described in the July 12, 2013 PCB Remediation Plan Modification Request). One sample was collected from each of the four building elevations at a distance of three inches from the former caulked joints for a total of four samples. Analytical results indicated that PCBs were present at concentrations of 1.41, 1.8, 3.2, and 8.3 ppm.

Based on these results, a liquid epoxy coating was applied to exterior concrete materials formerly in direct contact with the caulking and beyond the joint to a distance of three inches from the expansion joints. The remainder of the exterior concrete building materials beyond 3 inches from the windows are restricted to low-occupancy usage based on the presence of PCBs > 1 ppm and < 25 ppm. Additional information is presented in Section 2.6.3.

2.6.3 Encapsulation and Verification Wipe Sampling

Based on the results of bulk verification sampling, certain interior and exterior building materials required in-place management through the application of liquid coatings. A summary of these materials is as follows:

- Interior Upper Horizontal Joint Direct Contact Materials – In accordance with Section 7.3 of the PCB Remediation Plan, building materials formerly in direct contact with the upper horizontal caulked joints (the

header) were managed in-place through the application of two coats of Sikagard 62 liquid epoxy coating followed by the installation of new window frames and caulking.

Based on the results of the bulk verification sampling, which indicated that the in-place management of building materials containing PCBs > 1 ppm was warranted in the sixth floor elevator lobby of both buildings, the epoxy wipe sample collected from the sixth floor in the Grayson House was released for laboratory analysis. Analytical results indicated that PCBs were non-detect (< 0.20 µg/100cm^2).

- Interior Upper Horizontal Joint Adjacent Materials – Interior CMU block wall materials above the Grayson and Field Houses elevator lobby windows on the sixth floor were managed in-place through the application of two coats of Sikagard 550W acrylic coating (although only managed as an encapsulating coating on the sixth floor, the Sikagard 550W coating was applied to all interior CMU block walls in the elevator lobby areas based on the overall project requirements). Following application of the interior coating, a verification wipe sample was collected from coated CMU block materials on the sixth floor of the Grayson House. Analytical results indicated that PCBs were non-detect (< 0.20 µg/100cm^2).
- Exterior Expansion Joint Concrete Spans – Exterior concrete formerly in direct contact with and to a distance of three inches from the caulked joints was managed in-place through the application of two coats of Sikagard 62 liquid epoxy coating. Following application, one verification wipe sample was collected from materials within the return of the joint on each of the four building elevations (total of four samples). Analytical results indicated that PCBs were non-detect (<0.20 µg/100cm^2) in all four samples collected.

A summary of the analytical results for verification wipe samples is presented on Table 2-2 and sample locations are depicted on drawings provided in Appendix C. Additional information regarding continued the in-place management of building materials containing residual PCBs > 1 ppm is presented in Section 6.

2.7 NARROW STAIRWELL WINDOWS (TYPE G, H, AND I)

Narrow stairwell windows, identified as Type G, H, and I windows on the project drawings, are located on the east and west elevations of the northern and southern stairwells. Exterior perimeter window caulking along the narrow stairwell windows on the west side of the Grayson House (northern stairwell) was identified as containing ≥ 50 ppm PCBs (52 ppm) and ACM. A summary of the removal and verification program is provided below.

2.7.1 Caulking and Window Removal

Following the establishment of site controls as described above, perimeter window caulking and frames and components in direct contact with the caulking were removed using hand tools and/or power tools equipped with HEPA filtration for off-site disposal as ≥ 50 ppm PCB and asbestos waste. Consistent with the Notification and Approval, the remaining portions of the windows were removed for off-site disposal as asbestos waste with < 50 ppm PCBs (as an Excluded PCB Product). All materials were double wrapped in polyethylene sheeting and transported at the conclusion of each work day to the on-site waste storage area.

2.7.2 Building Material Verification Sampling

Following removal of the caulking and window frames, verification samples were collected in accordance with the Approval. Verification samples were collected from the exterior brick materials formerly in direct contact with the caulking at a frequency of one sample per 50 l.f. of caulking for a total of three samples. Analytical results indicated that PCBs were non-detect (two samples at < 0.10 ppm) and present at a concentration of 1.6 ppm.

Based on the sample collection frequency and locations, the PCB > 1 ppm result was applied to brick materials on the sixth and seventh floors. To verify the extent of PCBs > 1 ppm (and the required extent of encapsulation), the adjacent material sample collected from the sixth floor was released for analysis. Total PCBs were reported as non-detect (< 0.095 ppm) in the brick materials immediately beyond the window recess (approximately three inches from the joint).

Based on these results, exterior brick materials formerly in direct contact with the perimeter caulking and within the window recess on the sixth and seventh floors were managed in-place through encapsulation. Analytical results are presented on Table 2-1 and sample locations are depicted on drawings provided in Appendix C.

2.7.3 Encapsulation and Verification Wipe Sampling

As described above, residual PCBs > 1 ppm were identified in brick materials within the window recess on the sixth and seventh floors. As such, these materials were subject to in-place management through the application of two coats of Sikagard 62 liquid epoxy coating and the installation of the replacement window frames and sheet metal cladding. However, the liquid epoxy was applied to all brick material within the recess (i.e., on all floors) due to the overall project schedule as described above.

Based on the results of the bulk verification sampling, the epoxy verification wipe sample collected from the sixth floor was released for laboratory analysis. Analytical results indicated that PCBs were non-detect (< 0.20 µg/100cm^2). A summary of the analytical results for the verification wipe sample is presented on Table 2-2 and the sample location is depicted on drawings provided in Appendix C. Additional information regarding the continued in-place management of building materials containing residual PCBs > 1 ppm is presented in Section 6.

2.8 STAIRWELL WINDOWS (TYPE J)

Stairwell windows, identified as Type J windows on the project drawings, are located on the east and west elevation stairwell landings in the northern stairwell, the southern stairwell, and the central stairwell separating the Grayson and Field Houses. Interior perimeter window caulking along frame to masonry joints (brick and concrete) within the northern stairwell, the southern stairwell, and the eastern side of the central stairwell was identified as containing ≥ 50 ppm PCBs (up to 170 ppm) and ACM. A summary of the removal and verification program is provided below.

Typical Type J Window Opening (post-removal)

2.8.1 Caulking and Window Removal

Following the establishment of site controls as described above, perimeter window caulking and frames and components in direct contact with the caulking were removed using hand tools and/or power

tools equipped with HEPA filtration for off-site disposal as ≥ 50 ppm PCB and asbestos waste (based on the size of the windows no segregation was conducted of Type J window components). All materials were double wrapped in polyethylene sheeting and transported at the conclusion of each work day to the on-site waste storage area.

2.8.2 Building Material Verification Sampling

Following removal of the caulking and windows, verification samples of concrete and brick materials formerly in direct contract with the joints were collected to determine if residual PCBs > 1 ppm were present in the building materials. A summary of the verification sampling results is as follows:

- Brick - Verification samples were from two randomly selected locations formerly in direct contact with window caulking within each stairwell (or approximately one sample per 21 l.f. of caulking) for a total of six samples. Analytical results were as follows:
    - PCBs were reported as either non-detect (2 samples at < 0.10 ppm) or present at concentrations < 1 ppm (3 samples with reported concentrations of 0.15, 0.15, and 0.44 ppm); and
    - Total PCBs were reported at a concentration of 2.2 ppm in one sample (south stairwell landing between the second and third floors).
- Concrete – Verification samples were collected from two randomly selected locations formerly in direct contact with window caulking within each stairwell (or approximately one sample per 42 l.f. of caulking) for a total of six samples. Analytical results were as follows:
    - Total PCBs were reported at concentrations < 1 ppm in five of the six samples with concentrations ranging from 0.16 to 0.43 ppm; and
    - Total PCBs were reported at a concentration of 1.8 ppm in one sample (north stairwell landing between the fourth and fifth floors).

Based on the sample collection frequency and locations, the PCB > 1 ppm results were applied to former direct contact brick materials within the southern stairwell and in concrete materials in the northern stairwell from the locations reported to contain PCBs > 1 ppm to the next sample point with < 1 ppm PCB concentrations in either direction (or the remaining materials in a given direction with the applicable stairwell). To verify the extent of PCBs > 1 ppm (and the required extent of encapsulation), the corresponding adjacent material samples collected at a distance of two inches from the former caulked joints (equivalent to edge of the concrete sill and the extent of the replacement window frames) were released for analysis. Total PCBs were reported at concentrations of 0.18 ppm (brick) and 0.14 ppm (concrete).

Based on these results, building materials required in-place management as follows:

- Brick materials formerly in direct contact with and to a distance of two inches from the former interior Type J window joints within the southern stairwell from the 2nd/3rd floor landing to the top of the stairwell; and
- Concrete sill and header materials formerly in direct contact with and to a distance of two inches from the former interior Type J window joints within the northern stairwell from the 2nd/3rd floor landing to the top of the stairwell.

Additional information regarding the in-place management of these materials is presented in the section below. Analytical results are presented on Table 2-1 and sample locations are depicted on drawings provided in Appendix C.

2.8.3 Encapsulation and Verification Wipe Sampling

As described above, residual PCBs > 1 ppm were identified in certain brick and concrete materials associated with Type J windows in the southern and northern stairwells. As such, these materials are subject to in-place management through the application of two coats of Sikagard 62 liquid epoxy coating and the installation of the

replacement window frames and new caulking. However, the liquid epoxy was applied to all brick and concrete materials formerly in direct contact with and to a distance of two inches from the former caulked joints (i.e., on all floors).

Based on the results of the bulk verification sampling, the corresponding epoxy verification wipe samples from the southern stairwell brick and the northern stairwell concrete were released for laboratory analysis. Analytical results indicated that PCBs were non-detect (< 0.20 µg/100cm^2) in both samples. A summary of the analytical results for verification wipe samples is presented on Table 2-2 and the sample locations are depicted on drawings provided in Appendix C. Additional information regarding the continued in-place management of building materials containing residual PCBs > 1 ppm is presented in Section 6.

2.9 POST-ABATEMENT INDOOR AIR MONITORING

Indoor air samples were collected from one elevator lobby in Grayson House and one elevator lobby in Field House on October 15, 2013 to monitor PCB concentrations in indoor air following the completion of the remediation activities in accordance with Approval Condition 14a. An ambient outdoor background sample was also collected at the same time. Air samples were collected in accordance with US EPA Compendium Method TO-10A *"Determination of Pesticides and Polychlorinated Biphenyls in Ambient Air Using Low Volume Polyurethane Foam (PUF) Sampling Followed by Gas Chromatographic/Multi-Detector Detection (GC/MD)"* and submitted for laboratory analysis of PCB homologs.

At each of the sample locations a low volume PUF cartridge was connected to a personal air pump (SKC PCXR8 Air pump) with flexible silicone tubing. The cartridge was positioned between 3 and 5 feet above the floor using a telescoping tripod assembly placed within the elevator lobby.

Samples were collected at a rate of 2.6 liter per minute (L/min) for a period of four hours. The pump flow rates were set by the equipment rental supply company prior to delivery and verified in the field by Woodard & Curran personnel using a DryCal DC-Lite flow meter. Ambient temperature and barometric pressure were recorded prior to the start of the sampling and used to correct the laboratory provided results for standard temperature and pressure in accordance with Section 13.1.7 of Method TO-10A. Pumps were monitored periodically throughout the sample collection period and observations were recorded. At the end of the required sampling interval, the pumps were shut off and the cartridge placed in aluminum foil, labeled and placed on ice for delivery to Con-Test Analytical Laboratory of East Longmeadow Massachusetts by laboratory courier.

Analytical results from the indoor air sample collected from the sixth floor of the Grayson House were reported non-detect for total PCB Homologs, as PCBs were not detected above the laboratory's minimum reporting limit of 8 nanograms per cubic meter (ng/^{3}). Total PCBs were detected at a concentration of 6.7 ng/m^3 in the indoor air sample collected from the second floor of the Field House, below EPA's published guidance indoor air levels for schools (September 2009) of 450 ng/m^3 for adults and 600 ng/m^3 for children 15 to 19 years of age. The reported concentrations are also well below the threshold level of 300 ng/m^3 specified in the Approval. Of note, a PCB concentration of 22.2 ng/m^3 was detected in the ambient outdoor background sample. A summary of the results is presented in Table 2-3 and the complete laboratory analytical report and data validation summary are provided in Appendix D.

2.10 RESTORATION

Upon completion of the PCB remediation activities, the window and door replacement project was completed in accordance with the overall project specifications. All site controls, including fencing and scaffolding were dismantled and removed from the site. All PCB wastes were transported off-site for proper disposal in accordance with 40 CFR 761.

3. DATA USABILITY ASSESSMENT

This data quality and data usability assessment has been conducted to review the samples collected in support of the remediation and verification activities. Data validation and review was conducted by a third-party validator, Data Check, Inc. of New Durham, New Hampshire. This review included a check of field documentation including: sample collection and preservation methods; a check of the laboratory data and documentation; a review of the internal laboratory QA/QC procedures and results including surrogate recoveries, blank results, matrix spike (MS) and matrix spike duplicate (MSD) results, laboratory control standard (LCS) and laboratory control standard duplicate (LCSD) results; and an evaluation of sample holding times and field duplicate results. Data Check's data validation summaries are provided in Appendix D.

A summary of the data usability assessment for the data is presented below:

- The data packages were reviewed to ensure that all sample and associated quality assurance results were available. Results of the completeness review indicated that all collected samples were analyzed and all quality control results were available to complete the data validation process.
- All bulk and wipe samples were extracted by USEPA Method 3540C (Soxhlet Extraction) and analyzed for PCBs by USEPA Method 8082.
- All air samples were collected in accordance with EPA Method TO-10A and submitted for laboratory analysis of PCB homologs by Method 3540C.
- Consistent procedures and laboratory analysis of the data were achieved. Sample containers were packed on ice and delivered to the laboratory under standard chain of custody procedures. Although some samples were not received within the allowable temperature range, all samples were extracted and analyzed within allowable holding times for the method. No qualifications were applied.
- Some samples were analyzed at dilutions due to the concentration of PCBs present in the samples and/or due to sample matrix. Elevated quantitation limits are reported in these samples as a result of the dilutions.
- A total of four field duplicate samples were collected during the sampling events to evaluate the precision of the verification sample results. Relative percent difference (RPD) between the primary and associated duplicate samples met the acceptance criteria. No qualifications were applied.
- The RPD between sample column results for individual samples was evaluated to evaluate the precision of the results. The RPD met acceptance criteria (≤ 25 %) with the exception of one sample (GH-VBC-154). Analytical results from this sample were qualified as estimated based on this evaluation.
- The RPD between column results for the LCS/LCSD was evaluated to evaluate the precision of the results. The RPD met acceptance criteria (<25%) for all samples. No qualifications were applied.
- Accuracy of the analytical data was assessed by reviewing the recoveries for MS/MSD results. Results of the MS/MSD recoveries on six of the samples were outside acceptance limits; however, no qualifications were applied due to either interference from Aroclor 1254 detected in the primary sample, results being outside limits on only one of the columns, or the associated Aroclor result reported as non-detect in the primary sample.
- All surrogates met the acceptance criteria. No qualifications were applied.
- No analytes were detected in the method blanks or the field blank samples collected during the sampling events.

- According to the case narratives, for Aroclor 1254 in two samples, the samples contained two incompletely resolved Aroclors. The Aroclor with the closest matching pattern (Aroclor 1254 in both samples) was reported by the laboratory. No qualifications were applied.

Based on this review, the data adequately represents the materials tested, and is considered usable for its intended purpose.

4. WASTE STORAGE, DISPOSAL, AND EQUIPMENT DECONTAMINATION

Waste storage and disposal activities were completed in accordance with the procedures described in the PCB Remediation Plan. Caulking containing ≥ 50 ppm PCBs and window frames and components as described in the previous report sections were managed as a single waste stream and designated for disposal as ≥ 50 ppm PCB and asbestos waste. All polyethylene sheeting, PPE, and other disposable equipment and tools were also managed as ≥ 50 ppm PCB wastes within the same waste stream. Materials identified as containing < 50 ppm PCBs were managed for off-site disposal as asbestos waste with < 50 ppm (Excluded PCB Product) at the Minerva Enterprises landfill in Waynesburg, Ohio.

Following use, non-disposable equipment and tools were decontaminated using a double wipe with diesel or hexane soaked rags following gross removal of any dust or debris. Decontamination materials were managed for off-site disposal as ≥ 50 ppm PCB waste.

Wastes generated during the project were collected in secured, lined and covered roll-off waste containers and steel 55-gal drums in accordance with 40 CFR 761.65. These containers were properly labeled and marked in accordance with 40 CFR 761.40.

A total of 7.4 tons of material in two roll-offs were shipped off-site as ≥ 50 ppm PCB wastes for disposal at Environmental Quality's Wayne Disposal Landfill in Belleville, Michigan. Copies of all PCB waste shipment records including manifests and certificates of disposal are provided in Appendix E.

5. DEED RESTRICTION

Pursuant to Condition 16 of EPA's April 30, 2012 Approval, a draft deed restriction will be submitted to EPA for review and approval prior to recordation. This restriction is currently being developed by UMass and will be submitted under a separate cover. The restriction will include a description of the extent and levels of PCBs remaining on the building following remediation, a description of the remedial actions taken, a description of the use restrictions, and the long-term monitoring and maintenance requirements.

6. LONG TERM MONITORING AND MAINTENANCE OF ENCAPSULATED SURFACES

Pursuant to Condition 17 of EPA's April 30, 2012 Approval, a Monitoring and Maintenance Implementation Plan (MMIP) has been prepared to monitor the effectiveness of the remedy over time. The MMIP, which is being submitted concurrently with this Report and is included as Appendix F, includes the following:

- A description of the monitoring and maintenance activities that will be conducted, including inspection criteria, frequency, and routine maintenance activities;
- Sampling protocols, sampling frequency, analytical criteria and reporting requirements;
- A communications component, which details how the maintenance and monitoring results will be communicated to EPA and personnel responsible for the building use;
- A worker training component for maintenance workers or for persons that will be conducting work that could impact the building coatings/barriers; and
- A recordkeeping and reporting schedule to submit the results of the MMIP activities to EPA.

7. SUMMARY AND CONCLUSIONS

The PCB remediation activities described in this Completion Report have been completed in accordance with the PCB Remediation Plan and the Approval.

As indicated in the Plan, five areas were identified with ≥ 50 ppm PCB sealants, ranging in concentrations from 52 to 302,000 ppm. As part of this work, all identified ≥ 50 ppm PCB sealants as well as associated window/door frames and components were removed and disposal of off-site. Approximately 7.4 tons of bulk PCB waste (caulking, window/door frames and components, poly sheeting, etc.) contained in two roll-off containers were removed for off-site disposal as ≥ 50 ppm PCB wastes at Environmental Quality's Wayne Disposal Landfill in Belleville, Michigan.

Following removal of the ≥ 50 ppm caulking/glazing sealants and window/door frames and components, verification bulk samples were collected from substrate materials formerly in direct contact with the caulking to determine whether or not PCBs were present at concentrations above the applicable cleanup levels. Due to the overall project schedule, an epoxy coating was immediately applied to all former direct contact surfaces to allow for the installation of the replacement windows and the sheet metal cladding as quickly as possible (i.e., two coats of epoxy coating were installed on all building materials formerly in direct contact with the caulked joints and to the distances specified in the PCB remediation plan without consideration to the results of the bulk verification sampling).

Results of the verification bulk sampling indicated that residual concentrations of PCBs above the applicable high or low occupancy use criteria were present in substrate materials at five locations requiring subsequent long term monitoring and maintenance. The locations of these areas are:

- Elevator Hall CMU Block Walls (Type D windows) – Interior CMU block walls on the sixth floors of the Grayson and Field House;
- Grayson and Field House Concrete Spandrel Beams (exterior of building between Type D windows) – Exterior concrete spandrel beam materials on the north and south elevations and located in line with the Elevator Hall Windows;
- Grayson House Exterior Narrow Stairwell Window Jambs (Type G, H, and I windows) – Exterior brick materials on the jambs of the northern stairwell west elevation narrow stairwell windows on the sixth and seventh floor;
- Grayson House Interior Stairwell Concrete Sills (Type J windows) – Interior concrete window sill and header materials at the northern stairwell landings from the second through seventh floors; and
- Field House Interior Stairwell Brick Jambs (Type J windows) – Interior brick window jamb materials at the southern stairwell landings from the second floor through seventh floors.

With the exception of the filing of the deed notice and the implementation of long term monitoring and maintenance activities, the PCB remediation activities associated with the Approval have been completed.

Notes:
Verification samples collected in accordance with EPA Region 1 Standard Operating Procedure for Sampling Porous Surfaces for PCBs dated May 2011.
Samples were submitted to ConTest Analytical Laboratory for PCB analysis via USEPA method 8082 with Soxhlet Extraction (3540C).
Bold results indicate total PCBs reported at concentrations above the minimum laboratory reporting limit.
Shaded results indicate total PCBs reported at concentrations above the high or low use occupancy criteria, as applicable.
l.f. = linear feet
NR = Verification sample Not Required/Not Applicable.
J = Analytical results qualified as estimated based on results of data validation. See Appendix D for additional information.
(1) Verification samples of adjacent materials collected from those areas at which corresponding direct contact sample results indicated that PCBs were present at concentrations > 1 ppm as described in the PCB Remediation Plan.
(2) Low occupancy use criteria of ≤ 25 ppm applied to these materials.

Notes:
Verification wipe samples collected in accordance with the standard wipe test method as specified in 40 CFR 761.123.
Samples submitted to ConTest Analytical Laboratory for PCB analysis via USEPA method 8082 with Soxhlet Extraction (3540C).
(1) Verification wipe samples collected from those areas at which corresponding bulk sample results indicated that PCBs were present at concentrations > 1 ppm as described in the PCB Remediation Plan.

Table 2-3
Summary of Post-Abatement Air Sample Results
Grayson House, Amherst, Massachusetts

Location	Air Sample ID	Sample Date	PCB Concentration (ng/cartridge)	Flow Rate (L/Minute)	Duration (minutes)	Corrected Sample Volume (m^3)	Total PCB Concentration (ng/m^3)	Total PCB Concentration ($\mu g/m^3$)
Grayson - 6th Floor	GH-G6E-IAS-300	10/15/2013	< 5	2.63	240	0.628	< 8.0	< 0.008
Field - 2nd Floor	GH-F2E-IAS-301	10/15/2013	4	2.63	241	0.630	6.7	0.007
Background	GH-OUT-IAS-302	10/15/2013	14	2.64	241	0.631	22.2	0.022

Notes:
1. Air samples collected in accordance with USEPA Compendium Method TO-10A and submitted for laboratory analysis of PCBs homologs.
2. The flow rate displayed is the average flow rate as measured at the beginning and end of the sampling period; target flow of 2.60 L/minute.
3. Sample volume is corrected to standard temperature and pressure in accordance with Section 13.1.7 of Method TO-10A.
4. Average weather conditions during the October 15, 2013 sampling period were 22.4°C and 768.6 mmHg (indoor).
5. Total PCB concentration is the total PCB homologs reported by the lab (ng/cartridge) per corrected sample volume (m^3/cartridge).
6. "<" indicates that samples were reported below the laboratory's minimum detection limit.

Re: PCB Decontamination and Disposal Approval under 40 CFR § 761.61(c) and § 761.79(h)
Orchard Hill Complex/ Grayson House and Field House
University of Massachusetts, Amherst, Massachusetts

Dear Mr. Robinson:

This is in response to the University of Massachusetts (UMass) Notification[1] for approval of a proposed plan to address PCB contamination at the Grayson House and Field House student dormitories (the Sites) located within the Orchard Hill Residential area on the UMass Campus, at 141 Orchard Hill Drive in Amherst, Massachusetts. The Sites contain PCB-contaminated materials that exceed the allowable PCB levels under 40 CFR § 761.20(a) and § 761.62. Specifically, PCBs with greater than or equal to (≥) 50 parts per million (ppm) has been identified in certain caulk and glazing at the Sites.

UMass has requested an approval under 40 CFR § 761.61(c) and § 761.79(h) that includes the following activities:

- Remove PCB caulk and glazing with greater than or equal to (≥) 50 parts per million (ppm) and dispose in a TSCA approved or hazardous waste landfill;

---

[1] The notification was prepared by Woodard & Curran on behalf of the UMass to satisfy the requirements under 40 CFR § 761.61(c) and § 761.79(h). Information was submitted dated January 2012 (PCB Remediation Plan); January 30, 2012 (Remediation Plan Modification); February 6, 2012 (Response to Comments); April 24, 2012 (clarification on stairwell verification sampling); and April 27, 2012 (Woodard & Curran telephone discussion with EPA on encapsulation and Webster House verification sampling data). These submittals shall be referred to as the "Notification".

- Remove *non-porous surfaces* (e.g., metal window and door frames) in direct contact with PCB caulk and/or PCB glazing, and certain *porous surfaces* (i.e., stucco overhang ceiling) to a minimum distance of 5 inches from the PCB caulk, and dispose as a ≥ 50 ppm PCB waste in a TSCA approved or hazardous waste landfill;

- Remove *PCB remediation waste* with greater than (>) 1 ppm but less than (<) 50 ppm PCBs (e.g., metal frame components not in direct contact with PCB caulk or PCB glazing) and dispose of in a state permitted landfill under § 761.61(a)(5)(i)(B)(*2*)(*ii*); and,

- Encapsulate PCB-contaminated *porous surfaces* (i.e., concrete, brick, CMU, and slate) with two coats of liquid coating (epoxy and/or acrylic-based) and sheet metal cladding (in certain select areas).

In an April 27, 2012 telephone call with EPA, Woodard and Curran clarified that the proposed encapsulation of materials (e.g., brick, concrete, CMU, slate) formerly in direct contact with the PCB caulk and to the distances specified in the Notification, would be implemented without regard to the verification sample results due to the overall project schedule. However, bulk samples collected at the encapsulation distances would only be analyzed if the samples in direct contact with the PCB caulk were > 1 ppm.

In consideration of the data collected at the Site, EPA's review of the Webster House verification sampling data, and the above proposed encapsulation, EPA has determined that the proposed verification sampling frequencies following removal of the PCB caulk, but prior to encapsulation, are reasonable to confirm the PCB concentrations in the building substrates, with exception of the expansion joints and the brick located adjacent to the Stairwell Type J windows. EPA is requiring a higher verification sampling frequency for these substrates (see Attachment 1, Condition 12). EPA has determined that the alternative verification sampling frequency will not present an unreasonable risk to public health or the environment and may approve the sampling under § 761.61(c).

UMass has determined that certain glazing sealants and caulk, which have PCB concentrations at less than (<) 50 ppm are *Excluded PCB Products* as defined under § 761.3. Under the PCB regulations, *Excluded PCB Products* are authorized for use and thus there is no requirement for removal of these building materials or for decontamination of surfaces that are in contact with these building materials. However, as indicated in the Notification, these materials have been determined to be asbestos containing materials (ACM) and as such, they will be removed and disposed of as an ACM/PCB waste.

Based on the EPA's review, the information provided in the Notification meets the requirements under § 761.62(a) and § 761.79(h) for abatement of PCB caulk and glazing, and § 761.61(c) for encapsulation of the *porous surfaces*. EPA finds that the proposed encapsulation of PCB contaminated *porous surfaces* should effectively prevent direct exposure of these PCB contaminated *porous surfaces* to building users provided the physical barriers are maintained. As such, EPA may approve the encapsulation under § 761.61(c).

UMass may proceed with its project in accordance with 40 CFR § 761.61(c); § 761.62(a); § 761.79(h); its Notification; and, this Approval, subject to the conditions of Attachment 1. Under this Approval, EPA is reserving its rights to require additional investigation or mitigation measures should EPA determine that the encapsulation is not effective in eliminating exposure to PCBs.

Please note that UMass will be required to record a notation on the deed as required under § 761.61(a)(8) since PCBs at greater than (>) 1 ppm will remain on the Site.

This Approval does not provide for cleanup and disposal of PCB-contaminated soils since sampling is necessary to determine if PCBs are > 1 ppm in soils. Upon completion of the investigation of soils at the Sites, UMass may request a modification to this Approval to incorporate cleanup of PCB-contaminated soils or UMass may submit a separate cleanup and disposal notification under 40 CFR § 761.61 (see Attachment 1, Condition 1).

Questions and correspondence regarding this Approval should be directed to:

Kimberly N. Tisa, PCB Coordinator (OSRR07-2)
United States Environmental Protection Agency
5 Post Office Square, Suite 100
Boston, Massachusetts 02109-3912
Telephone: (617) 918-1527
Facsimile: (617) 918-0527

EPA shall not consider this project complete until it has received all submittals required under this Approval. Please be aware that upon EPA receipt and review of the submittals, EPA may request any additional information necessary to establish that the work has been completed in accordance with 40 CFR Part 761, the Notification, and this Approval.

Sincerely,

Nancy Barnak for

James T. Owens III, Director
Office of Site Remediation & Restoration

Attachment 1 – PCB Approval Conditions

ATTACHMENT 1:

PCB DECONTAMINATION AND DISPOSAL APPROVAL CONDITIONS
GRAYSON & FIELD HOUSES (the Sites)
UNIVERSITY OF MASSACHUSETTS
141 ORCHARD HILL DRIVE
AMHERST, MASSACHUSETTS

GENERAL CONDITIONS

1. This Approval is granted under the authority of Section 6(e) of the Toxic Substances Control Act (TSCA), 15 U.S.C. § 2605(e), and the PCB regulations at 40 CFR Part 761, and applies solely to the *PCB bulk product waste* and the *PCB remediation waste* located at the Sites and identified in the Notification.

   a. This Approval does not address the cleanup of PCB-contaminated soils as the nature and extent of the contamination have not been defined. Upon completion of the investigation, the University of Massachusetts (UMass) may request a modification to this Approval to incorporate cleanup of the soils under this Approval (see Condition 19) or UMass may submit a separate cleanup plan in accordance with 40 CFR § 761.61.

2. UMass shall conduct on-site activities in accordance with the conditions of this Approval and with the Notification.

3. In the event that the cleanup plan described in the Notification differs from the conditions specified in this Approval, the conditions of this Approval shall govern.

4. The terms and abbreviations used herein shall have the meanings as defined in 40 CFR § 761.3 unless otherwise defined within this Approval.

5. UMass must comply with all applicable federal, state and local regulations in the storage, handling, and disposal of all PCB wastes, including PCBs, PCB Items and decontamination wastes generated under this Approval. In the event of a new spill during response actions, UMass shall contact EPA within 24 hours for direction on PCB cleanup and sampling requirements.

6. UMass is responsible for the actions of all officers, employees, agents, contractors, subcontractors, and others who are involved in activities conducted under this Approval. If at any time UMass has or receives information indicating that UMass or any other person has failed, or may have failed, to comply with any provision of this Approval, it must report the information to EPA in writing within 24 hours of having or receiving the information.

7. This Approval does not constitute a determination by EPA that the transporters or disposal facilities selected by UMass are authorized to conduct the activities set forth in the Notification. UMass is responsible for ensuring that its selected transporters and disposal facilities are authorized to conduct these activities in accordance with all applicable federal, state and local statutes and regulations.

8. This Approval does not: 1) waive or compromise EPA's enforcement and regulatory authority; 2) release UMass from compliance with any applicable requirements of federal, state or local law; or 3) release UMass from liability for, or otherwise resolve any violations of federal, state or local law.

NOTIFICATION AND CERTIFICATION CONDITIONS

9. This Approval may be revoked if the EPA does not receive written notification from UMass of its acceptance of the conditions of this Approval within 10 business days of receipt.

10. UMass shall submit the following information for EPA review and/or approval:

    a. a certification signed by its selected abatement/demolition contractor, stating that the contractor(s) has read and understands the Notification, and agrees to abide by the conditions specified in this Approval;

    b. a contractor work plan, prepared and submitted by the selected demolition or abatement contractor(s) describing the containment and air monitoring that will be employed during abatement activities. This work plan should also include information on how and where wastes will be stored and disposed of, and on how field equipment will be decontaminated; and,

    c. a certification signed by the selected analytical laboratory, stating that the laboratory has read and understands the extraction and analytical method requirements and quality assurance requirements specified in the Notification and in this Approval.

DECONTAMINATION AND DISPOSAL CONDITIONS

11. To the maximum extent practical, engineering controls, such as barriers, and removal techniques, such as the use of HEPA ventilated tools, shall be utilized during removal processes. In addition, to the maximum extent possible, disposable equipment and materials, including PPE, will be used to reduce the amount of decontamination necessary.

12. The decontamination standard for *porous surfaces* (e.g., concrete, brick, stucco) shall be less than or equal to (≤) 1 part per million (ppm) PCBs.

    a. All post-cleanup verification sampling for *porous surfaces* shall be performed on a bulk basis (i.e., mg/kg) and reported on a dry weight analysis. Verification sampling for *porous surfaces* shall be conducted in accordance with the EPA Region 1 *Standard Operating Procedure For Sampling Porous Surfaces for Polychlorinated Biphenyls (PCBs) Revision 4, May 5, 2011*, at a maximum depth interval of 0.5 inches, and in accordance with the frequency specified in the Notification, except as follows:

        i) Stairwell J-Type Windows: A minimum of 2 brick samples shall be collected from each stairwell (minimum total of 6 samples).

        ii) Expansion Joints North and South Walls: A minimum of 1 concrete sample shall be collected from each building side where PCB caulk is removed (minimum total of 4 samples).

    b. Chemical extraction for PCBs shall be conducted using Methods 3500B/3540C of SW-846; and, chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another extraction/analytical method(s) is validated according to Subpart Q.

13. Following encapsulation of PCB-contaminated *porous surfaces.* post-encapsulation sampling shall be conducted to determine the effectiveness of the encapsulation.

    a. Wipe sampling of encapsulated surfaces shall be performed on a surface area basis by the standard wipe test as specified in 40 CFR § 761.123 (i.e. μg/100 cm^2). Chemical extraction for PCBs shall be conducted using Method 3500B/3540C of SW-846; and, chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another extraction or analytical method(s) is validated according to Subpart Q.

    b. In the event that any wipe sample PCB concentration is greater than (>) 1 μg/100 cm^2, UMass shall contact EPA for further discussion and direction on alternatives.

    c. UMass will be required to include the encapsulated areas in the deed restriction and in the long-term monitoring and maintenance implementation plan (MMIP) (Conditions 16 and 17, respectively).

14. Initial post-abatement indoor air sampling for PCBs shall be conducted in the elevator lobbies to determine the impact of the abatement activities.

    a. Indoor air sampling shall be conducted in accordance with EPA Method TO-4A or TO-10A. Sufficient sample volumes shall be collected to provide a minimum laboratory reporting limit of less than (<) 0.05 $\mu g/m^3$. At a minimum, PCB analysis shall include PCB homologues and/or PCB congeners.

    b. In the event that PCB concentrations in the air samples are > 0.30 $\mu g/m^3$, UMass shall contact EPA for further discussion and direction on alternatives, which may include additional indoor cleaning and/or development of a site-specific risk exposure assessment.

15. PCB waste (at any concentration) generated as a result of the activities described in the Notification, excluding any decontaminated materials, shall be marked in accordance with CFR 40 CFR § 761.40; stored in a manner consistent with 40 CFR § 761.65; and, disposed of in accordance with 40 CFR § 761.61 or § 761.62, unless otherwise specified below.

    a. Decontamination wastes and residues shall be disposed of in accordance with 40 CFR § 761.79(g)(6).

    b. Moveable equipment, tools, and sampling equipment shall be decontaminated in accordance with either 40 CFR § 761.79(b)(3)(i)(A), § 761.79(b)(3)(ii)(A), or § 761.79(c)(2).

    c. PCB-contaminated water generated during decontamination shall be decontaminated in accordance with 40 CFR § 761.79(b)(1) or disposed of under § 761.60.

DEED RESTRICTION AND USE CONDITIONS

16. Within sixty (60) days of completing the activities described in the Notification and in the Approval, UMass shall submit for EPA review and approval, a draft deed restriction for the Site. The deed restriction shall include: a description of the extent and levels of contamination at the Site following abatement; a description of the actions taken at the Site; a description of the use restrictions for the Site; and the long-term monitoring and maintenance requirements on the Site. Within seven (7) days of receipt of EPA's approval of the draft deed restriction, UMass shall record the deed restriction. A copy of this Approval shall be attached to the deed restriction.

INSPECTION, MODIFICATION AND REVOCATION CONDITIONS

17. Within forty-five (45) days of completion of the work authorized under this Approval, UMass shall submit for EPA's review and approval, a detailed monitoring and maintenance implementation plan (MMIP) for the surface barriers and for indoor air. UMass shall incorporate any changes to the MMIP required by EPA.

    a. The MMIP shall include: a description of the activities that will be conducted, including inspection criteria, frequency, and routine maintenance activities; sampling protocols, sampling frequency, and analytical criteria; and, reporting requirements, as applicable.

    b. The MMIP shall include a communications component which details how the maintenance and monitoring results will be communicated to the Site users, including teachers, parents, students, other on-site workers, and interested stakeholders.

    c. The MMIP also shall include a worker training component for maintenance workers or for any person that will be conducting work that could impact the barriers encapsulating the PCB-contaminated surfaces.

    d. UMass shall submit the results of these long-term monitoring and maintenance activities to EPA. Based on its review of the results, EPA may determine that modification to the MMIP is necessary in order to monitor and/or evaluate the long-term effectiveness of the barriers.

    e. Activities required under the MMIP shall be conducted until such time that EPA determines, in writing, that such activities are no longer necessary.

18. UMass shall allow any authorized representative of the Administrator of the EPA to inspect the Site and to inspect records and take samples as may be necessary to determine compliance with the PCB regulations and this Approval. Any refusal by UMass to allow such an inspection (as authorized by Section 11 of TSCA) shall be grounds for revocation of this Approval.

19. Any modification(s) in the plan, specifications, or information submitted by UMass, contained in the Notification, and forming the basis upon which this Approval has been issued, must receive prior written approval from the EPA. UMass shall inform the EPA of any modification, in writing, at least ten (10) days prior to such change. No action may be taken to implement any such modification unless the EPA has approved of the modification, in writing. The EPA may request additional information in order to determine whether to approve the modification.

If such modification involves a change in the use of the Site which results in exposures not considered in the Notification, the EPA may revoke, suspend, and/or modify this Approval upon finding that this risk-based disposal action may pose an unreasonable risk of injury to health or the environment due to the change in use. EPA may take similar action if the EPA does not receive requested information needed from UMass to make a determination regarding potential risk.

20. Approval for these activities may be revoked, modified or otherwise altered: if EPA finds a violation of the conditions of this Approval or of 40 CFR Part 761, including EPA's PCB Spill Cleanup Policy, or other applicable rules and regulations; if EPA finds that these activities present an unreasonable risk to public health or the environment; if EPA finds that there is migration of PCBs from the Site; or if EPA finds that changes are necessary to comply with new rules, standards, or guidance for such approvals. UMass may apply for appropriate modifications in the event new rules, standards, or guidance come into effect.

21. Any misrepresentation or omission of any material fact in the Notification or in any records or reports may result in the EPA's revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.

RECORDKEEPING AND REPORTING CONDITIONS

22. UMass shall prepare and maintain all records and documents required by 40 CFR Part 761, including but not limited to the records required under Subparts J and K. A written record of the decontamination and disposal and the analytical sampling shall be established and maintained by UMass in one centralized location, until such time as EPA approves in writing a request for an alternative disposition of such records. All records shall be made available for inspection to authorized representatives of EPA.

23. As required under Condition 17 of this Approval, UMass shall submit the results of the long-term monitoring and maintenance activities to EPA as specified in the final MMIP to be approved by EPA.

24. UMass shall submit a final report to the EPA within 120 days of completion of the activities authorized under this Approval. At a minimum, this final report shall include: a short narrative of the project activities; characterization and confirmation sampling analytical results; copies of the accompanying analytical chains of custody; field and laboratory quality control/quality assurance checks; an estimate of the quantity of PCB waste disposed of and the size of the PCB cleanup area(s); copies of manifests and bills of lading; and copies of certificates of disposal or similar certifications issued by the disposer. The Report shall also include a copy of the recorded deed restriction and a certification signed by a UMass official verifying that the authorized activities have been implemented in accordance with this Approval and the Notification.

25. Required submittals shall be mailed to:

    Kimberly N. Tisa, PCB Coordinator
    United States Environmental Protection Agency
    5 Post Office Square, Suite 100 – (OSRR07-2)
    Boston, Massachusetts 02109-3912
    Telephone: (617) 918-1527
    Facsimile: (617) 918-0527

26. No record, report or communication required under this Approval shall qualify as a self-audit or voluntary disclosure under EPA audit, self-disclosure or penalty policies.

INSTALL NEW FLASHING AT BRICK WORK. INSTALL NEW WEEPHOLES IN BRICK AT TOP AND BOTTOM OF CAVITY @ 24" ON CENTER MAXIMUM.

N-12 INSTALL NEW WINDOW SYSTEMS IN DORM ROOMS AND BATHROOMS ON FLOORS 2 TO 7. SEE WINDOW TYPES ON SHEETS A3-01 FOR ADDITIONAL INFORMATION.

N-13 SEE SHEETS A1-11, A1-12, A1-13, AND A1-14 FOR BALCONY/PORCH CONCRETE REPAIR AND RAILING REPAIRS.

N-14 INSTALL NEW DRYER VENT THROUGH WALL.

NO ≥ 50 ppm PCB REMEDIATION ACTIVITY ON THIS ELEVATION.

NEW WORK NOTES:

N-01 INSTALL NEW RIBBON WINDOW SYSTEM AT FIRST FLOOR. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-02 INSTALL NEW STOREFRONT AND ENTRANCE DOOR SYSTEM AT FIRST FLOOR. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-03 INSTALL NEW PATIO DOOR AND WINDOW SYSTEM AT FIRST FLOOR APARTMENTS. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-04 INSTALL NEW PATIO DOOR/WINDOW SYSTEM AT QUAD/LOUNGE ROOMS AND APARTMENTS WITH BALCONY ACCESS ON FLOORS 2 TO 7. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-05 INSTALL NEW VERTICAL STRIP WINDOW SYSTEM AT STAIRWELLS. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-06 INSTALL NEW STOREFRONT AND ENTRANCE DOOR SYSTEM AT FIRST FLOOR STAIRWELLS. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-07 INSTALL NEW WINDOW SYSTEM AT FLOORS 2 TO 7 OF STAIR TOWERS. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-08 LOCATION OF EXISTING STRUCTURAL EXPANSION JOINT IN BUILDING.

N-09 INSTALL NEW AWNING WINDOW SYSTEM IN APARTMENT. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-10 INSTALL NEW WINDOW SYSTEM AT STAIR/ELEVATOR LOBBY ON FLOORS 2 TO 7. PROVIDE EXPANSION JOINT IN WINDOW SYSTEM. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-11 INSTALL NEW FACE BRICK PANELS BETWEEN WINDOWS IN DORM ROOMS. REINFORCE EXISTING 4" CMU BACKUP. INSTALL NEW COMBINATION VAPOR BARRIER/AIR BARRIER ON FACE OF EXISTING 4" CMU. INSTALL NEW 2" OF RIGID INSULATION IN CAVITY. INSTALL NEW MORTAR ENTRAPMENT MAT BETWEEN INSULATION AND BRICK. INSTALL NEW MASONRY TIES BETWEEN BACKUP 4" CMU AND FACE BRICK. INSTALL NEW FLASHING AT BRICK WORK. INSTALL NEW WEEPHOLES IN BRICK AT TOP AND BOTTOM OF CAVITY @ 24" ON CENTER MAXIMUM.

N-12 INSTALL NEW WINDOW SYSTEMS IN DORM ROOMS AND BATHROOMS ON FLOORS 2 TO 7. SEE WINDOW TYPES ON SHEETS A3-01 FOR ADDITIONAL INFORMATION.

N-13 SEE SHEETS A1-11, A1-12, A1-13, AND A1-14 FOR BALCONY/PORCH CONCRETE REPAIR AND RAILING REPAIRS.

N-14 INSTALL NEW DRYER VENT THROUGH WALL.

NEW WORK NOTES:

N-01 INSTALL NEW RIBBON WINDOW SYSTEM AT FIRST FLOOR. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-02 INSTALL NEW STOREFRONT AND ENTRANCE DOOR SYSTEM AT FIRST FLOOR. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-03 INSTALL NEW PATIO DOOR AND WINDOW SYSTEM AT FIRST FLOOR APARTMENTS. SEE ELEVATIONS ON SHEETS A2-13 AND A2-14.

N-04 INSTALL NEW PATIO DOOR/WINDOW SYSTEM AT QUAD/LOUNGE ROOMS AND APARTMENTS WITH BALCONY ACCESS ON FLOORS 2 TO 7. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-05 INSTALL NEW VERTICAL STRIP WINDOW SYSTEM AT STAIRWELLS. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-06 INSTALL NEW STOREFRONT AND ENTRANCE DOOR SYSTEM AT FIRST FLOOR STAIRWELLS. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-07 INSTALL NEW WINDOW SYSTEM AT FLOORS 2 TO 7 OF STAIR TOWERS. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-08 LOCATION OF EXISTING STRUCTURAL EXPANSION JOINT IN BUILDING.

N-09 INSTALL NEW AWNING WINDOW SYSTEM IN APARTMENT. SEE WINDOW TYPES ON SHEET A3-01FOR ADDITIONAL INFORMATION.

N-10 INSTALL NEW WINDOW SYSTEM AT STAIR/ELEVATOR LOBBY ON FLOORS 2 TO 7. PROVIDE EXPANSION JOINT IN WINDOW SYSTEM. SEE WINDOW TYPES ON SHEET A3-01 FOR ADDITIONAL INFORMATION.

N-11 INSTALL NEW FACE BRICK PANELS BETWEEN WINDOWS IN DORM ROOMS. REINFORCE EXISTING 4" CMU BACKUP. INSTALL NEW COMBINATION VAPOR BARRIER/AIR BARRIER ON FACE OF EXISTING 4" CMU. INSTALL NEW 2" OF RIGID INSULATION IN CAVITY. INSTALL NEW MORTAR ENTRAPMENT MAT BETWEEN INSULATION AND BRICK. INSTALL NEW MASONRY TIES BETWEEN BACKUP 4" CMU AND FACE BRICK. INSTALL NEW FLASHING AT BRICK WORK. INSTALL NEW WEEPHOLES IN BRICK AT TOP AND BOTTOM OF CAVITY @ 24" ON CENTER MAXIMUM.

N-12 INSTALL NEW WINDOW SYSTEMS IN DORM ROOMS AND BATHROOMS ON FLOORS 2 TO 7. SEE WINDOW TYPES ON SHEETS A3-01 FOR ADDITIONAL INFORMATION.

N-13 SEE SHEETS A1-11, A1-12, A1-13, AND A1-14 FOR BALCONY/PORCH CONCRETE REPAIR AND RAILING REPAIRS.

N-14 INSTALL NEW DRYER VENT THROUGH WALL.

LEGEND

GH-VBC-138 ● FORMER DIRECT CONTACT MATERIAL VERIFICATION SAMPLE LOCATION AND IDENTIFIER

AREA OF ≥ 50 ppm PCB REMEDIATION ACTIVITIES AS DESCRIBED IN THE NOTIFICATION. ALL OTHER WINDOW/DOOR CAULKING REMOVED FOR DISPOSAL AS ACM AND < 50 ppm PCBs (EXCLUDED PCB PRODUCT)

NOTES:

1. ORIGINAL DESIGN DRAWINGS BY CBI CONSULTING, INC. MODIFIED WITH THE ADDITION OF VERIFICATION SAMPLES FOR PCB REMEDIATION ACTIVITIES. ALL OTHER INFORMATION INCLUDED AS ORIGINALLY PRESENTED IN THE DRAFT DESIGN DRAWINGS.
2. SAMPLE LOCATIONS APPROXIMATED BASED OFF FIELD MEASUREMENTS.
3. WHERE APPLICABLE, INTERIOR LOCATIONS DEPICTED ON EXTERIOR DRAWINGS TO PRESENT APPROXIMATE SAMPLE LOCATIONS.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12G0792

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMA Grayson Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-119	12G0792-01	Product/Solid	7th - South	SW-846 8082A	
GH-VBC-121	12G0792-02	Product/Solid	2nd - South	SW-846 8082A	
GH-VBC-123	12G0792-03	Product/Solid	3rd - North	SW-846 8082A	
GH-VBC-125	12G0792-04	Product/Solid	6th - North	SW-846 8082A	
GH-VBCD-127	12G0792-05	Product/Solid	Duplicate	SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 10/03/2012 - Sample descriptions revised for 12G0792-03 & -04.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C]

B055713-MS1, B055713-MSD1

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1260

B055713-BS1, B055713-BSD1, B055713-MS1, B055713-MSD1

Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.

Analyte & Samples(s) Qualified:

Aroclor-1254 [2C]

12G0792-01[GH-VBC-119], 12G0792-02[GH-VBC-121], 12G0792-03[GH-VBC-123], 12G0792-05[GH-VBCD-127]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** SLD **DATE:** 7/24/12

1) **Was the chain(s) of custody relinquished and signed?** Yes No **No CoC Included**
2) **Does the chain agree with the samples?** Yes No
   If not, explain:
3) **Are all the samples in good condition?** Yes No
   If not, explain:
4) **How were the samples received:**

On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 22.6

5) **Are there Dissolved samples for the lab to filter?** Yes No
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes No
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No N/A _____
9) **Do all samples have the proper Base pH:** Yes No N/A _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	5
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12G0797

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMA Grayson Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-126	12G0797-04	Concrete		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

Sample Receipt Checklist

CLIENT NAME: Woodward + Curran RECEIVED BY: SO DATE: 7/24/12

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included
2) Does the chain agree with the samples? Yes No
   If not, explain:
3) Are all the samples in good condition? Yes No
   If not, explain:
4) How were the samples received:

On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 22.6

5) Are there Dissolved samples for the lab to filter? Yes No
   Who was notified _____ Date _____ Time _____
6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
   Who was notified _____ Date _____ Time _____
7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No N/A _____
9) Do all samples have the proper Base pH: Yes No N/A _____
10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes No N/A

Containers received at Con-Test

	# of containers		# of containers

Cc: George Franklin
Subject: UMass Grayson Sample - GH-VBC-126

Good morning Meghan

Please release sample GH-VBC-126 for PCB analysis by soxhlet extraction.
I will have to confirm with George what the TAT should be. Five day TAT should be OK. I will speak with George around lunch time and let you know if this needs to be changed. These samples should have been received at the lab with the samples from SDG 12G0792 but they were placed on a separate chain of custody.

We will have a bunch of bulks coming in tonight, some will be on a 48hr TAT.

Thanks!

Kim Rinard

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** HB **DATE:** 7/25/12

1) Was the chain(s) of custody relinquished and signed? (Yes) No **No CoC Included**

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? Yes (No) N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 22.6

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No (N/A) _____

9) Do all samples have the proper Base pH: Yes No (N/A) _____

10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** KKM **DATE:** 7-30-12

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No **No CoC Included**
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**
   On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑
   Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.8C
5) **Are there Dissolved samples for the lab to filter?** Yes (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes (No)
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No (N/A) _____
9) **Do all samples have the proper Base pH:** Yes No (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	12
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12G0981

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMA Grayson/Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-146	12G0981-04	Concrete		SW-846 8082A	
GH-VBC-132	12G0981-07	Brick		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C]

B056571-MSD1

Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.

Analyte & Samples(s) Qualified:

Aroclor-1254 [2C]

12G0981-04[GH-VBC-146]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
O-03	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** KKM **DATE:** 7-30-12

1) **Was the chain(s) of custody relinquished and signed?** **Yes** **No** **No CoC Included**
2) **Does the chain agree with the samples?** **Yes** **No**
   If not, explain:
3) **Are all the samples in good condition?** **Yes** **No**
   If not, explain:
4) **How were the samples received:**

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.8C

5) **Are there Dissolved samples for the lab to filter?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** **N/A** _____
9) **Do all samples have the proper Base pH:** **Yes** **No** **N/A** _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** **N/A**

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	12
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

Subject: UMass Grayson/Field - Hold Samples to be Released (7/27/12)

Hi Meghan

Hope you had a good weekend!!

Could you please release the following solid samples for EPA 8082 PCB analysis via 3540C soxhlet extraction.

GH-VBC-132 7/27/12

GH-VBC-146 7/27/12

Both samples should've been received by the lab with the batch of samples on ConTest job #12G0979, delivered on 7/27/12.

These may be run on a five day TAT- no rush required.

Thanks!
Kim Rinard
Scientist

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

con-test® ANALYTICAL LABORATORY

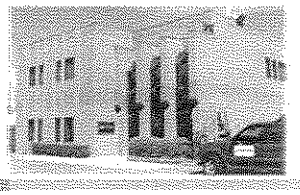
Sample Receipt Checklist



CLIENT NAME: Woodard + Curran RECEIVED BY: JSM DATE: 7-31-12

1) **Was the chain(s) of custody relinquished and signed?** Yes No No CoC Included
2) **Does the chain agree with the samples?** Yes No
   If not, explain:
3) **Are all the samples in good condition?** Yes No
   If not, explain:
4) **How were the samples received:**

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9

5) **Are there Dissolved samples for the lab to filter?** Yes No
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes No
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No N/A _____
9) **Do all samples have the proper Base pH:** Yes No N/A _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	1
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12G1033

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass - Amherst, MA

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-153	12G1033-01	Concrete		SW-846 8082A	
GH-VBC-154	12G1033-02	Concrete		SW-846 8082A	
GH-VBCD-155	12G1033-03	Concrete		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B056240-MS1, B056240-MSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** KKM **DATE:** 7-31-12

1) **Was the chain(s) of custody relinquished and signed?** **Yes** **No** **No CoC Included**
2) **Does the chain agree with the samples?** **Yes** **No**
   If not, explain:
3) **Are all the samples in good condition?** **Yes** **No**
   If not, explain:
4) **How were the samples received:**

On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**

Temperature °C by Temp blank _____ Temperature °C by Temp gun 22.5C

5) **Are there Dissolved samples for the lab to filter?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** **N/A** _____
9) **Do all samples have the proper Base pH:** **Yes** **No** **N/A** _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** **N/A**

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12G1034

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass - Amherst, MA

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VWC-157	12G1034-02	Wipe	South - 2/3 - Vent	SW-846 8082A	
GH-VWC-164	12G1034-09	Wipe	North - 4/5 - Sill	SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

Subject: UMA Grayson/Field Wipes - Submitted 7/31/12

Good afternoon Meghan

I have just reviewed the analytical results we just received for the brick/concrete samples submitted Monday 7/30/12.

Please release the following wipes for PCB analysis by 3540c Soxhlet:

GH-VWB-157 7/31/12 1645
GH-VWC-164 7/31/12 1755

I have to check with Jeff on the TAT for these however it should be 5 days.

Thanks!

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT 8/14/12-revised the client sample ID for samples 1 and 2 per client request.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: JSM DATE: 6-3-12

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included
2) Does the chain agree with the samples? Yes No
   If not, explain:
3) Are all the samples in good condition? Yes No
   If not, explain:
4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.5

5) Are there Dissolved samples for the lab to filter? Yes No
   Who was notified _____ Date _____ Time _____
6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
   Who was notified _____ Date _____ Time _____
7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

8) Do all samples have the proper Acid pH: Yes No N/A _____
9) Do all samples have the proper Base pH: Yes No N/A _____
10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes No N/A

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12H0713

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass Field+Grayson

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VWC-170	12H0713-01	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: JSM DATE: 8·21·12

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No No CoC Included
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**
   On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐
   Were the samples received in Temperature Compliance of (2-6°C)? Yes (No) N/A
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 0.6
5) **Are there Dissolved samples for the lab to filter?** Yes (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes (No)
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

   Permission to subcontract samples? Yes No
   (Walk-in clients only) if not already approved
   Client Signature: _____
8) **Do all samples have the proper Acid pH:** Yes No (N/A) _____
9) **Do all samples have the proper Base pH:** Yes No (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	1
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran RECEIVED BY: KKM DATE: 5/14/13

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included
2) Does the chain agree with the samples? Yes (No)
   If not, explain: *
3) Are all the samples in good condition? (Yes) No
   If not, explain:
4) How were the samples received:
   On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑
   Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.4
5) Are there Dissolved samples for the lab to filter? Yes (No)
   Who was notified _____ Date _____ Time _____
6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No
   Who was notified _____ Date _____ Time _____
7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

8) Do all samples have the proper Acid pH: Yes No (N/A) _____
9) Do all samples have the proper Base pH: Yes No (N/A) _____
10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes No N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	6
1 Liter Plastic		Air Cassette

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13E0681

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass Grayson/Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-178	13E0681-01	Concrete	Concrete CMV @ East S/F Windows	SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** WK **DATE:** 5/28/13

1) **Was the chain(s) of custody relinquished and signed?** **Yes** **No** **No CoC Included**
2) **Does the chain agree with the samples?** **Yes** **No**
   If not, explain:
3) **Are all the samples in good condition?** **Yes** **No**
   If not, explain:
4) **How were the samples received:**
   On Ice [X] Direct from Sampling [ ] Ambient [ ] In Cooler(s) [X]
   Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.1
5) **Are there Dissolved samples for the lab to filter?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** **N/A** _____
9) **Do all samples have the proper Base pH:** **Yes** **No** **N/A** _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** **N/A**

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13E1083

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass Grayson Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBS-184	13E1083-01	Product/Solid		SW-846 8082A	
GH-VBC-182	13E1083-02	Product/Solid		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260 [2C]

B074080-BS1, B074080-BSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** RLF/JHP **DATE:** 5/31/13

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No No CoC Included
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**
   On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒
   Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.8°
5) **Are there Dissolved samples for the lab to filter?** Yes (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes (No)
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No (N/A) _____
9) **Do all samples have the proper Base pH:** Yes No (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

GH-VBCD-192	13F0700-03	Product/Solid		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** WK **DATE:** 6/20/13

1) **Was the chain(s) of custody relinquished and signed?** **Yes** **No** **No CoC Included**
2) **Does the chain agree with the samples?** **Yes** **No**
   If not, explain:
3) **Are all the samples in good condition?** **Yes** **No**
   If not, explain:
4) **How were the samples received:**
   On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒
   Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.8
5) **Are there Dissolved samples for the lab to filter?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** **N/A** _____
9) **Do all samples have the proper Base pH:** **Yes** **No** **N/A** _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** **N/A**

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13F0752

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: UMass Grayson Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-191	13F0752-01	Product/Solid		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.

Analyte & Samples(s) Qualified:

Aroclor-1254, Aroclor-1254 [2C]
13F0752-01[GH-VBC-191]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
O-03	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** RLF/SLD **DATE:** 6/21/13

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No **No CoC Included**
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**

On Ice ☐ Direct from Sampling ☑ Ambient ☐ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? **Yes** (No) **N/A**

Temperature °C by Temp blank _____ Temperature °C by Temp gun 22.6°C

5) **Are there Dissolved samples for the lab to filter?** **Yes** (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** (Yes) **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** (N/A) _____
9) **Do all samples have the proper Base pH:** **Yes** **No** (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	1
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13F1036

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Umass Grayson/Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBC-193	13F1036-01	Concrete		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:

Aroclor-1260 [2C]

B076013-MS1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** RLF **DATE:** 6/28/13

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No **No CoC Included**
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.7°C

5) **Are there Dissolved samples for the lab to filter?** Yes (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes (No)
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No (N/A) _____
9) **Do all samples have the proper Base pH:** Yes No (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	5
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B076229-MS1, B076229-MSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** RLF **DATE:** ~~7/B~~ RLF 7/3/13

1) **Was the chain(s) of custody relinquished and signed?** Yes No No CoC Included
2) **Does the chain agree with the samples?** ~~Yes~~ No
   If not, explain:
3) **Are all the samples in good condition?** Yes No
   If not, explain:
4) **How were the samples received:**

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.1°C

5) **Are there Dissolved samples for the lab to filter?** Yes No
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes No
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No N/A _____
9) **Do all samples have the proper Base pH:** Yes No N/A _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	3
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments: Sampling dates on COC incorrect SLB 7/2/13

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13G0635

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Grayson/Field House

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VBB-209	13G0635-01	Brick		SW-846 8082A	
GH-VBBQ-210	13G0635-02	Water		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B076893-MSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** JMH **DATE:** 7/16/13

1) **Was the chain(s) of custody relinquished and signed?** (Yes) No **No CoC Included**
2) **Does the chain agree with the samples?** (Yes) No
   If not, explain:
3) **Are all the samples in good condition?** (Yes) No
   If not, explain:
4) **How were the samples received:**

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.3°

5) **Are there Dissolved samples for the lab to filter?** Yes (No)
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes (No)
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

8) **Do all samples have the proper Acid pH:** Yes No (N/A) _____
9) **Do all samples have the proper Base pH:** Yes No (N/A) _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No (N/A)

Containers received at Con-Test

	# of containers		# of containers

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13G0722

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Umass - Grayson/Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VWC-211	13G0722-01	Wipe		SW-846 8082A	
GH-VWC-212	13G0722-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** CEC **DATE:** 7/18/13

1) **Was the chain(s) of custody relinquished and signed?** **Yes** **No** **No CoC Included**
2) **Does the chain agree with the samples?** **Yes** **No**
   If not, explain:
3) **Are all the samples in good condition?** **Yes** **No**
   If not, explain:
4) **How were the samples received:**
   On Ice ☑ (Ice) Direct from Sampling ☐ Ambient ☑ In Cooler(s) ☐
   Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**
   Temperature °C by Temp blank _____ Temperature °C by Temp gun 19.8°
5) **Are there Dissolved samples for the lab to filter?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** **No**
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** **Yes** **No** **N/A** _____
9) **Do all samples have the proper Base pH:** **Yes** **No** **N/A** _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** **No** **N/A**

Containers received at Con-Test

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 13G0803

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Umass Grayson/Field

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GH-VWB 213	13G0803-01	Wipe	Narrow Stairwell Window	SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** RLF **DATE:** 7/19/13

1) **Was the chain(s) of custody relinquished and signed?** Yes No **No CoC Included**
2) **Does the chain agree with the samples?** Yes No
   If not, explain:
3) **Are all the samples in good condition?** Yes No
   If not, explain:
4) **How were the samples received:**

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9°C

5) **Are there Dissolved samples for the lab to filter?** Yes No
   Who was notified _____ Date _____ Time _____
6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes No
   Who was notified _____ Date _____ Time _____
7) **Location where samples are stored:** 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) **Do all samples have the proper Acid pH:** Yes No N/A _____
9) **Do all samples have the proper Base pH:** Yes No N/A _____
10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes No N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	1
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 10/25/2013 - 13J0576-01 ID revised per clients request.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Project Chemist

AIR Only Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** CEC **DATE:** 10/15/13

1) Was the chain(s) of custody relinquished and signed? (Yes) No

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) Are there any samples "On Hold"? Yes (No) Stored where:

5) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No

Who was notified _____ Date _____ Time _____

6) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

7) Temperature °C by Temp blank 2.0° **Temperature °C by Temp gun** _____

Containers received at Con-Test

		# of Containers	Types (Size, Duration)
Summa Cans (TO-14/TO-15/APH)			
Tedlar Bags			
TO-17 Tubes			
Regulators			
Restrictors			
Hg/Hopcalite Tube (NIOSH 6009)			
(TO-4A/ TO-10A/TO-13) PUFs		3	
PCB Florisil Tubes (NIOSH 5503)			
Air cassette			
PM 2.5/PM 10			
TO-11A Cartridges			
Other			

Unused Summas/PUF Media:

Unused Regulators:

1) Was all media (used & unused) checked into the WASP?

2) Were all returned summa cans, Restrictors & Regulators and PUF's documented as returned in the Air Lab Inbound/Outbound Excel Spreadsheet?

Laboratory Comments:

Doc #278 Rev. 3 August 2013

UMASS GRAYSON/FIELD - PROJECT SUMMARY

ConTest Analytical Laboratory Job Numbers: 12G0792, 12G0797, 12G0863, 12G0979, 12G0981, 12G1026, 12G1033, 12G1034, 12H0144, & 12H0713

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 0.6, 3.8, 5.4, 5.5, 22.5, and 22.6 degrees Celsius. Although many samples were not received within 2.0 to 6.0 degrees Celsius, they were received at the laboratory on the day of sample collection and no qualifications will be applied.

PCBs:

All polychlorinated biphenyl compound (PCB) samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB surrogates met acceptance criteria. No qualifications will be applied.

The PCB method blanks were non-detect (ND) for all target analytes. No qualifications will be applied.

PCB field blank sample GH-VBQ-127 (12G0863-01) was ND for all target analytes. No qualifications will be applied.

The PCB matrix spike/matrix spike duplicate (MS/MSD) performed on samples GH-VBC-119 (12G0792-01), GH-VBB-128 (12G0979-01), GH-VBC-146 (12G0981-04), and GH-VBC-154 (12G1033-02) met acceptance criteria (40%-140%) with the following exceptions:

LAB ID	SAMPLE ID	PCB-1016 (%) MS/MS/MSD/MSD	PCB-1260 (%) MS/MS/MSD/MSD	QUALIFIER
12G0792-01	GH-VBC-119	OK/184/OK/188	OK/OK/OK/OK	None, PCB-1016 ND
12G0981-04	GH-VBC-146	OK/OK/OK/142	OK/OK/OK/OK	None, PCB-1016 ND
12G1033-02	GH-VBC-154	OK/169/OK/149	374/414/318/348	None, PCB-1254 interference

The PCB laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) met acceptance criteria. No qualifications will be applied.

PCB field duplicate samples GH-VBC-121 (12G0792-02)/GH-VBCD-127 (12G0792-05) and GH-VBC-154 (12G1033-02)/GH-VBCD-155 (12G1033-03) met acceptance criteria. No qualifications will be applied.

The relative percent difference (RPD) between the column results for all detected PCBs met acceptance criteria (≤ 25%) with the following exception:

LAB ID	SAMPLE ID	PCB	RPD	QUALIFIER
12G1033-02	GH-VBC-154	1254	27.5	J

According to the case narrative, for Aroclor 1254 in sample GH-VBC-146 (12G0981-04); "Sample contains two incompletely resolved Aroclors. Aroclor with the closest matching pattern is reported." No qualifications will be applied.

Some samples were analyzed at dilutions due to the high concentration of PCBs present in the samples and/or due to sample matrix. Elevated quantitation limits are reported in these samples as a result of the dilutions performed.

UMASS GRAYSON/FIELD - PROJECT SUMMARY

ConTest Analytical Laboratory Job Numbers: 13E0477, 13E0681, 13E1083, 13F0700, 13F0752, 13F1036, 13G0140, 13G0635, 13G0722 & 13G0803

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 2.8, 3.1, 3.3, 4.1, 4.4, 4.7, 5.8, 5.9, 19.8, and 22.6 degrees Celsius. Although some samples were not received within 2.0 to 6.0 degrees Celsius, they were received at the laboratory on the day of sample collection and no qualifications will be applied.

PCBs:

All polychlorinated biphenyl compound (PCB) samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB surrogates met acceptance criteria. No qualifications will be applied.

The PCB method blanks were non-detect (ND) for all target analytes. No qualifications will be applied.

PCB field blank samples, GH-VBSQ-176 (13E0477-06), GH-VBCQ-191 (13F0700-02), and GH-VBBQ-210 (13G0635-02), were ND for all target analytes. No qualifications will be applied.

The PCB matrix spike/matrix spike duplicate (MS/MSD) performed on samples GH-VBC-178 (13E0681-01), GH-VBC-189 (13F0700-01), GH-VBC-193 (13F1036-01), GH-VBC-206 (13G0140-01), and GH-VBB-209 (13G0635-01) met acceptance criteria (40%-140%) with the following exceptions:

LAB ID	SAMPLE ID	PCB-1016 (%) MS/MS/MSD/MSD	PCB-1260 (%) MS/MS/MSD/MSD	QUALIFIER
13F1036-01	GH-VBC-193	OK/OK/OK/OK	OK/157/OK/OK	None, PCB-1260 ND & only 1 out
13G0140-01	GH-VBC-206	OK/162/OK/166	252/418/245/335	None, PCB-1254 interference
13G0635-01	GH-VBB-209	OK/OK/OK/147	OK/OK/151/145	None, sample ND

The PCB laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) met acceptance criteria. No qualifications will be applied.

PCB field duplicate samples GH-VBS-173 (13E0477-03)/GH-VBSD-177 (13E0477-07) and GH-VBC-189 (13F0700-01)/GH-VBCD-192 (13F0700-03) met acceptance criteria. No qualifications will be applied.

The relative percent difference (RPD) between the column results for all detected PCBs met acceptance criteria. No qualifications will be applied.

According to the case narrative, for Aroclor 1254 in sample GH-VBC-191 (13F0752-01); "Sample contains two incompletely resolved Aroclors. Aroclor with the closest matching pattern is reported." No qualifications will be applied.

One sample was analyzed at dilution due to the high concentration of PCBs present in the samples and/or due to sample matrix. Elevated quantitation limits are reported in this sample as a result of the dilution performed.

GRAYSON/FIELD POST ABATEMENT AIR MONITORING - PROJECT SUMMARY

Con-Test Analytical Laboratory Job Number: 13J0576

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 2.0 degrees Celsius. No qualifications will be applied.

PCBs:

All polychlorinated biphenyl (PCB) homolog samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB homolog surrogates met acceptance criteria. No qualifications will be applied.

The PCB homolog method blank was non-detect (ND) for all target analytes. No qualifications will be applied.

No PCB homolog field blank samples were submitted with this analytical package. No qualifications will be applied.

No PCB homolog matrix spike/matrix spike duplicate (MS/MSD) was performed on a sample from this analytical package since these were air samples. No qualifications will be applied.

The PCB homolog laboratory control sample/laboratory control sample duplicate (LCS/LCSD) met acceptance criteria. No qualifications will be applied.

No PCB homolog field duplicate samples were submitted with this analytical package. No qualifications will be applied.

1. INTRODUCTION

This Monitoring and Maintenance Implementation Plan (MMIP) has been prepared by Woodard & Curran on behalf of the University of Massachusetts (UMass) pursuant to Condition 17 of the United States Environmental Protection Agency's (EPA) April 30, 2012 PCB Decontamination and Disposal Approval issued under 40 CFR 761.61(c) and 761.79(h) for the Grayson and Field Houses. This plan presents the monitoring and maintenance activities that will be conducted to assess the long-term effectiveness of the encapsulants applied, as an interim measure, to residual concentrations of polychlorinated biphenyls (PCBs) detected in interior and exterior masonry at certain areas of the Grayson and Field Houses in the Orchard Hill Residential Complex on the UMass Campus in Amherst, Massachusetts (see Figure 1-1).

1.1 BACKGROUND

The Grayson and Field Houses, originally constructed in 1964, are residential dormitories for undergraduate students constructed as a single structure with a stairway separating the two buildings. The buildings are seven stories high with student rooms on the second through seventh floors and common areas and meeting rooms on the first floors. A window and door replacement project was conducted in two phases during the summers of 2012 and 2013. As described in the Notification[1], ≥ 50 ppm PCB containing caulking was detected in some of the caulking around select windows and doors.

1.2 REMEDIATION SUMMARY

The PCB remediation activities performed at Grayson and Field Houses are described in detail in the PCB Remediation Completion Report, which is being submitted to EPA concurrently with this MMIP. In summary, the activities performed to remediate ≥ 50 ppm PCB containing caulking and adjacent building materials included the following activities:

- Removal and off-site disposal of ≥ 50 ppm PCB caulking, glazing sealants, and backing materials in direct contact with the caulking as ≥ 50 ppm PCB waste;
- Removal and off-site disposal of window and door frames and components (including glass) in direct contact with ≥ 50 ppm PCB caulking and glazing sealants as ≥ 50 ppm PCB waste;
- Removal and off-site disposal of a total of 7.4 tons of bulk PCB waste (caulking, window/door frames and components, poly sheeting, etc.) contained in two roll-off containers. The containers were transported for off-site disposal as ≥ 50 ppm PCB waste at Environmental Quality's Wayne Disposal Landfill in Belleville, Michigan;
- Encapsulation of building materials scheduled to remain in place containing PCBs at concentrations above applicable high or low occupancy clean up levels using a combination of liquid coatings and physical barriers (e.g., replacement window frames); and
- A deed notice will be recorded identifying the encapsulated areas and areas restricted to low occupancy usage.

[1] The Notification was prepared by Woodard & Curran on behalf of UMass to satisfy the requirements under 40 CFR 761.61(c) and 761.79(h). Information was submitted dated January 2012 (PCB Remediation Plan); January 30, 2012 (Remediation Plan Addendum/Clarification); February 6, 2012 (Response to Comments); April 24, 2012 (clarification on stairwell verification sampling); April 27, 2012 (Woodard & Curran telephone discussion with EPA on encapsulation and Webster House verification sampling data); and July 12, 2013 (PCB Remediation Plan Modification Request). These submittals are referred to as the "Notification".

1.3 PCB BULK PRODUCT WASTE REMOVALS AND VERIFICATION

Following the removal of the ≥ 50 ppm PCB caulking and associated components, bulk verification samples were collected from building materials formerly in direct contact with and away from the caulked joints that contained PCBs at concentrations ≥ 50 ppm to determine whether or not PCBs were present at concentrations above the applicable cleanup levels. Samples were collected from masonry surfaces at the frequencies described in the PCB Remediation Plan. The locations and analytical results of the verification sampling are summarized in Table 1-1.

As indicated on Table 1-1, analytical results indicated that PCBs were reported as either non-detect or ≤ 1 ppm in 23 of 27 samples collected from building materials formerly in direct contact with ≥ 50 ppm caulked joints. Total PCBs were reported at concentrations > 1 ppm in the following samples:

- Elevator Hall Windows – PCBs were reported at a concentration of 1.8 ppm in the sample collected from the sixth floor CMU block materials formerly in direct contact with the interior window caulking on the north side of the Grayson building;
- Narrow Stairwell Windows – PCBs were reported at a concentration of 1.6 ppm in the sample collected from the sixth floor brick window jamb materials formerly in direct contact with the exterior window caulking on the west side of the northern stairwell (Grayson House);
- Stairwell Windows – PCBs were reported at a concentration of 1.8 ppm in the sample collected from the concrete sill materials formerly in direct contact with interior window caulking on the stairwell landing between the fourth and fifth floors in the northern stairwell (Grayson House);
- Stairwell Windows – PCBs were reported at a concentration of 2.2 ppm in the sample collected from the brick window jamb materials formerly in direct contact with the interior window caulking on the stairwell landing between the second and third floors of the southern stairwell (Field House); and
- Exterior Concrete Spandrels – PCBs were assumed to be present in concrete materials formerly in direct contact with exterior expansion joint caulking along the concrete to concrete expansion joints on the north and south elevations (four locations located between the Elevator Hall Windows).

Based on the results above, corresponding samples collected from materials away from the joints were analyzed for PCBs. Analytical results indicated that PCBs were either non-detect (one sample at < 0.095 ppm) or present at concentrations < 1 ppm (0.14, 0.18, and 0.7 ppm) in the samples collected from interior locations. Analytical results from the four samples collected from the concrete spandrel beams indicated that PCBs were below the low occupancy use criteria of ≤ 25 ppm (at a distance of three inches from the joint) with reported concentrations of 1.41, 1.8, 3.2, and 8.3 ppm.

Bulk verification samples collected from building materials remaining in place adjacent to the first floor storefront windows (Type N-02) met cleanup levels in all samples as described in the PCB Remediation Completion Report. As such, no encapsulation was performed at these locations, and the monitoring or maintenance of these windows is not included in the scope of this MMIP.

1.4 ENCAPSULATION/BARRIER INSTALLATION AREAS AND BASELINE SAMPLING

Due to the overall project schedule, following removal of the windows and the collection of the building material verification samples, the epoxy coating was immediately applied to all former direct contact surfaces to allow for the installation of the replacement windows and the sheet metal cladding as quickly as possible (i.e., two coats of epoxy coating were installed on all building materials formerly in direct contact with the caulked joints and to the distances specified in the PCB remediation plan without consideration to the results of the bulk verification sampling). This approach has removed the source material (caulking) and is utilizing a physical barrier approach (encapsulation) to eliminate the direct contact exposure pathway and migration pathways of PCBs remaining in the building materials.

Based on the presence of PCBs in masonry materials as described in Section 1.2 above, building materials in select areas are being managed in-place in accordance with the approved Remediation Plan and this MMIP.

After the coatings were applied and allowed to cure, baseline surface wipe samples were collected from the epoxy-encapsulated surfaces within the joint at the same locations sampled during the bulk verification sample phase. Based on the overall project schedule, wipe samples were collected immediately following cure of the epoxy to allow for the installation of the windows to be conducted. If the bulk sample results were subsequently reported with PCBs below applicable cleanup levels, the epoxy surface wipe sample was not analyzed.

Epoxy surface wipe samples were analyzed to determine the effectiveness of the encapsulant at a total of eight locations: at four locations where PCBs were reported above applicable cleanup levels in the bulk samples as described in Section 1.2; and, at four exterior locations where PCBs were assumed to be present above applicable cleanup levels as described in Section 1.2.

One baseline wipe sample was collected from the Grayson House sixth floor elevator hall area following application of the Sikagard 550W to the interior CMU block beyond the window joint. The location of the wipe sample was selected using a random number generator to determine the location along the joint and then the distance from the joint at which the wipe was centered. In accordance with Section 3.3.3 of the Remediation Plan, following collection of the verification wipe samples, the sheet metal flashing was installed over the adjacent materials, as specified.

Results of the baseline wipe sampling are summarized on Table 1-2. As indicated on Table 1-2, total PCBs were reported as non-detect (< 0.20 ug/100cm^2) for PCBs in all 8 of the wipe samples collected from the epoxy coated surfaces and submitted for laboratory analysis. Analytical results from the interior CMU block wipe sample indicated that PCBs were non-detect (< 0.20 µg/100cm^2).

1.5 POST-ABATEMENT AIR MONITORING

Following the completion of PCB remediation activities, indoor air samples were collected from two elevator lobbies (one in Grayson House and one in Field House) to monitor PCB concentrations in indoor air in accordance with the approved Plan.

Analytical results from the indoor air sample collected from the sixth floor of the Grayson House were reported non-detect for total PCB Homologs, as PCBs were not detected above the laboratory's minimum reporting limit of 8 nanograms per cubic meter (ng/^{3}). Total PCBs were detected at a concentration of 6.7 ng/m^3 in the indoor air sample collected from the second floor of the Field House, below EPA's published guidance indoor air levels for schools (September 2009) of 450 ng/m^3 for adults and 600 ng/m^3 for children 15 to 19 years of age. The reported concentrations are also well below the threshold level of 300 ng/m^3 specified in the Approval. Of note, a PCB concentration of 22.2 ng/m^3 was detected in the ambient outdoor background sample. A summary of the results is presented in Table 1-3.

2. MONITORING AND MAINTENANCE IMPLEMENTATION PLAN

This MMIP has been developed to monitor the effectiveness of the remedy for the interior and exterior materials that contain PCBs at concentrations above the high occupancy use criteria of 1 ppm remaining in place beneath the encapsulating barriers. These areas are:

- Elevator Hall CMU Block Walls (Type D windows) – CMU block walls on the sixth floors of the Grayson and Field House have been encapsulated as follows:
    - CMU block materials formerly in direct contact with the caulked joint (i.e., header surfaces) are encapsulated using two coats of Sikagard 62 epoxy coating and the replacement window frames/sheet metal flashing;
    - CMU block materials above the upper horizontal joints to the first 90-degree angle (i.e., to the ceiling at a distance of approximately 15 inches) are encapsulated using two coats of Sikagard 550W elastomeric acrylic coating. (Note: Sikagard 550W was applied to the CMU block walls of all elevator lobbies as part of the renovation project).
- Grayson and Field House Concrete Spandrel Beams (exterior of building between Type D windows) – Concrete spandrel beam materials on the north and south elevations and located in line with the Elevator Hall Windows formerly in direct contact with the concrete expansion joint caulking and to a distance of three inches in either direction have been encapsulated using two coats of Sikagard 62 epoxy coating.
- Grayson House Exterior Narrow Stairwell Window Jambs (Type G, H, and I windows) – Brick materials on the jambs of the northern stairwell west elevation narrow stairwell windows on the sixth and seventh floors formerly in direct contact with the exterior perimeter window caulking and to the end of the window recess (the first 90-degree angle) have been encapsulated using two coats of Sikagard 62 epoxy coating and the replacement window frames/sheet metal flashing.
- Grayson House Interior Stairwell Concrete Sills (Type J windows) – Concrete window sill and header materials at the northern stairwell landings from the second through seventh floors formerly in direct contact with the interior perimeter window caulking and to the first 90-degree angle (approximately two inches) have been encapsulated using two coats of Sikagard 62 epoxy coating and the replacement window frames.
- Field House Interior Stairwell Brick Jambs (Type J windows) – Brick window jamb materials at the southern stairwell landings from the second floor through seventh floors formerly in direct contact with the interior perimeter window caulking and to a distance of two inches (i.e., the extent of the replacement window frames) have been encapsulated using two coats of Sikagard 62 epoxy coating and the replacement window frames.

The extent of these areas is depicted on the attached Figure 2-1.

2.1 INSPECTION AND SAMPLING

The following describes the inspections, sampling and reporting to be conducted for these areas:

- Visual inspections of the encapsulated surfaces will be conducted to look for signs of encapsulant deterioration and/or signs of weathering or disturbance of metal window frames and sheet metal barriers.
- Surface wipe samples of the encapsulated concrete spandrel materials on the exterior side of the Elevator Hall Windows (Type D) will be collected to evaluate the concentration of PCBs present at the surface. A total of two samples (one from each building) will be collected. The wipe samples will be collected from the

portion of the joints between the first and second floors due to access limitations at higher locations (a lift would be required) as follows:

  - The specific joint on each building (north or south elevation) will be randomly selected; and
  - The side of the joint (right or left) will be randomly selected.

- Surface wipe samples of the encapsulated interior CMU block walls on the sixth floor of the Grayson and Field Houses elevator hall areas not located beneath the Type D window frames will be collected to evaluate the concentration of PCBs present at the surface. One wipe sample will be collected as follows:
  - The elevator lobby (either Grayson or Field) will be randomly selected;
  - The location of the wipe sample on the joint will be selected by randomly selecting a number between 0 and 12 (representing the upper 12 foot long horizontal joint) with the zero point assigned to the left end of the joint and proceeding to the right (i.e., 12 would be assigned to the right end of the joint); and
  - The distance of the wipe sample from the window frame will then be selected by randomly selecting a number from zero to 15 (representing the distance from the window to the ceiling in inches).
- No surface wipe samples will be collected from encapsulated surfaces formerly in direct contact with caulking at the Type G, H, and I Narrow Stairwell Windows or the Type J Stairwell Windows, as all encapsulated surfaces at these window types are located under the replacement window frames or sheet metal cladding. Direct contact access to these surfaces is prohibited by a secondary barrier (i.e., new windows and/or metal cladding installed over the encapsulant).
- No indoor air samples will be conducted as part of the long term monitoring and maintenance activities, as suspected source materials have been removed and indoor air samples collected in October 2013, after remediation activities were completed at the Grayson and Field Houses, were reported non-detect < 8.0 ng/m^3) and 6.7 ng/^{3} for total PCB Homologs.

The initial long term monitoring and sampling activities at the Grayson and Field Houses will be conducted following approval of this Plan and likely to occur in the summer months to correspond with the campus-wide long term monitoring program currently implemented by UMass. A recommendation for subsequent rounds of monitoring will be based on these results and included in the report submittal.

2.2 ACTION LEVELS AND CORRECTIVE MEASURES

Based on a review of the products' technical specifications, it is not anticipated the coatings will require any routine maintenance activities. A combination of visual inspections and laboratory sample results will be used to verify the continued effectiveness of the applied barriers. In areas where damage or significant deterioration of the coatings, window frames, or sheet metal cladding is observed, the barrier will be repaired or replaced. Upon receipt of the laboratory results after each monitoring round, the data will be compared to the following action levels to determine whether additional monitoring or corrective measures are needed:

- If ≤ 1 µg/100 cm^2 – no additional action; long term maintenance and monitoring to continue in accordance with this plan;
- In areas where significant encapsulant deterioration is observed or PCBs are reported at concentrations ≥ 10 µg/100 cm^2, the following actions will be taken:
  - An additional coat of the encapsulating product will be applied and follow-up wipe samples will be collected. If analytical results indicate that PCBs are still present at concentrations ≥ 10 µg/100

cm^2 after the prescribed re-application, UMass will evaluate alternative solutions in conjunction with EPA.

- If > 1 and < 10 µg/100 cm^2 – continued monitoring will occur to establish patterns or trends in concentration. If increasing concentrations are determined, then additional coatings may be applied and/or alternative solutions will be discussed with EPA.

These levels are considered representative and protective for this project given that the occupancy and use of these areas are transitory in nature (e.g., elevator lobby and stairwells) or located on the exterior side of the upper levels of the building. All analytical results and corrective measures will be reported to EPA in the scheduled report.

3. TRAINING AND COMMUNICATIONS

It is not anticipated that any workers or building occupants will come into prolonged or routine contact with the encapsulated areas. The only activities that may encounter the encapsulants are planned maintenance activities. It is not anticipated that workers performing maintenance activities would require any special training or need to take extra precautions due to the presence of the coatings and sheet metal cladding; however, UMass will conduct general awareness training for facility and maintenance personnel to ensure they are aware of the importance of maintaining the encapsulant.

For any non-routine projects that involve work that could encounter the encapsulant (e.g., window replacement or repair projects [although, this is unlikely given that all windows were replaced as part of the project]), relevant and appropriate worker training requirements and procedures specific to the task will be developed and implemented. Current UMass procedures dictate that all work that impacts building materials must undergo an “all hazard review”. This review would indicate that portions of building materials at the Field and Grayson Houses have been flagged as a having residual PCB containing material under encapsulants/barriers. As such, any work that will disturb these materials will be conducted by appropriately trained workers following the necessary work procedures for containments (polyethylene sheeting, etc.) and disposal. These activities will be reported to EPA in the monitoring report. In addition, UMass has included, as a component of their annual “Right-To-Know” and Asbestos Training Program, a PCBs in materials awareness session, including the encapsulated areas on the campus.

4. REPORTING

The activities completed as part of this plan will be documented and submitted to EPA as part of the campus-wide long term monitoring report submitted annually by UMass. This report will document the following:

- Results of the visual inspections;
- Results of the sampling and analyses;
- Comparisons to action levels and recommendations for corrective measures;
- Any corrective measures implemented;
- Any non-routine major projects conducted at the building that encountered the encapsulated area, and the training and protective measures that were implemented;
- Any proposed modifications to the monitoring and maintenance program (e.g., based on the sampling results or discussions with EPA, the frequency of the program may be modified); and
- A statement on the continued effectiveness of the encapsulants and/or secondary barriers.

It is possible that results of long term monitoring may warrant or require modifications to this plan. In the event that a modification to the MMIP is necessary, such an amendment will be proposed to EPA for approval as part of the scheduled report submittal.

Notes:
Verification samples collected in accordance with EPA Region 1 Standard Operating Procedure for Sampling Porous Surfaces for PCBs dated May 2011.
Samples were submitted to ConTest Analytical Laboratory for PCB analysis via USEPA method 8082 with Soxhlet Extraction (3540C).
Bold results indicate total PCBs reported at concentrations above the minimum laboratory reporting limit.
Shaded results indicate total PCBs reported at concentrations above the high or low use occupancy criteria, as applicable.
l.f. = linear feet
NR = Verification sample Not Required/Not Applicable.
J = Analytical results qualified as estimated based on results of data validation. See Appendix D for additional information.
(1) Verification samples of adjacent materials collected from those areas at which corresponding direct contact sample results indicated that PCBs were present at concentrations > 1 ppm as described in the PCB Remediation Plan.
(2) Low occupancy use criteria of ≤ 25 ppm applied to these materials.

Notes:
1. Air samples collected in accordance with USEPA Compendium Method TO-10A and submitted for laboratory analysis of PCBs homologs.
2. The flow rate displayed is the average flow rate as measured at the beginning and end of the sampling period; target flow of 2.60 L/minute.
3. Sample volume is corrected to standard temperature and pressure in accordance with Section 13.1.7 of Method TO-10A.
4. Average weather conditions during the October 15, 2013 sampling period were 22.4°C and 768.6 mmHg (indoor).
5. Total PCB concentration is the total PCB homologs reported by the lab (ng/cartridge) per corrected sample volume (m^3/cartridge).
6. "<" indicates that samples were reported below the laboratory's minimum detection limit.
