Re: PCB Remediation Completion Report
Kline Geology Laboratory
Yale University, New Haven, Connecticut

Dear Ms. Tisa:

On behalf of Yale University, please find attached a Polychlorinated Biphenyl (PCB) Remediation Completion Report and a Monitoring and Maintenance Implementation Plan (MMIP) prepared in accordance with the U.S. Environmental Protection Agency's (EPA's) September 19, 2011 PCB Decontamination and Disposal Approval under 40 CFR 761.61(c) and 761.79(h) (the Approval) for the Kline Geology Laboratory located within the Science Hill area of Yale's campus in New Haven, Connecticut.

If you have any comments, questions, or require further information, please do not hesitate to contact me at the number listed above.

Sincerely,

WOODARD & CURRAN INC.

1. INTRODUCTION

This Polychlorinated Biphenyl (PCB) Remediation Completion Report has been prepared by Woodard & Curran on behalf of Yale University to comply with the requirements set forth in the U.S. Environmental Protection Agency's (EPA) September 19, 2011 PCB Decontamination and Disposal Approval under 40 CFR 761.61(c) and 761.79(h) (the Approval) for the subject work, as modified on December 14, 2011. This Approval is provided in Appendix A to this Report.

This Report documents PCB remediation activities conducted at the Kline Geology Laboratory located on the Yale University New Haven campus. In accordance with the Approval, the PCB Remediation Completion Report is to be submitted following completion of all activities authorized under the Approval. PCB remediation activities were conducted in accordance with the Notification[1] and the Approval. Remediation and verification activities were completed between September 2011 and March 2012 with final removal and off-site disposal of PCB wastes completed in March 2012. However, following completion of the overall building renovation project and prior to implementation of post-abatement indoor air monitoring, the building's ventilation system was evaluated and changes/ improvements to the system were recommended, of which Yale decided to implement. Given that modifications and renovations to the ventilation system were pending, the collection of the post-abatement air monitoring samples was deferred until after completion of the ventilation system upgrades. These upgrades were completed in December 2013 and the indoor air samples were collected in March 2014.

In accordance with Condition 14 of the Approval, a draft deed restriction was submitted to EPA within 30 days of completion of the work (on April 3, 2014). Upon receipt of EPA comments, the final deed restriction will be recorded and pursuant to Condition 23 of the Approval, a copy will be submitted to EPA.

1.1 SITE DESCRIPTION

The Kline Geology Laboratory is a three story building primarily utilized as a graduate research laboratory and includes laboratories, lecture halls, student and faculty offices, and a library on the third floor. The Kline Geology Laboratory Building is located in the Science Hill area of the Yale campus and is surrounded by Whitney Avenue to the east, parking areas to the north, University laboratories to the west, and a museum to the south. Surrounding ground surfaces are generally flat or slightly sloped away from the building and are either covered with asphalt pavement, brownstone, concrete, or landscaped areas. A Site Locus Map is provided as Figure 1-1.

1.2 SITE BACKGROUND / CONCEPTUAL SITE MODEL

The Kline Geology Laboratory was originally constructed in 1963, during a time period when PCBs were sometimes used in standard construction building materials (e.g., caulking). In preparation for a window replacement project, a materials survey was conducted to assess the potential presence of various hazardous materials that might be encountered during the window removal process. This materials survey included an inspection and sampling of suspect materials for PCBs.

Analytical results indicated that certain caulking materials contained PCBs at concentrations greater than 50 parts per million (ppm). Adjacent building materials were sampled to determine whether PCBs had migrated from the caulking into these adjacent materials, and the characterization data confirmed that detectable concentrations of PCBs were present in certain adjacent materials at regulated concentrations. After completing the characterization of PCB-containing materials at the Site, these results were used to develop a remedial approach that was incorporated

[1] Information was prepared by Woodard & Curran on behalf of Yale to satisfy the requirements under 40 CFR 761.61(c) and 761.79(h). Information was submitted on August 5, 2011 (PCB Remediation Plan), September 1, 2011 (Response to EPA Comments), and September 13, 2011 (email clarification on brownstone encapsulation). These submittals together comprise the "Notification."

into the overall renovation project plans as presented in the PCB Remediation Plan submitted to EPA in August 2011 and subsequently approved on September 19, 2011.

1.3 REPORT ORGANIZATION

This Completion Report has been prepared to document the PCB remediation work completed at the building as part of a window replacement project (Section 2). A data usability assessment is included in Section 3 and a summary of the waste storage and disposal is presented in Section 4.The Monitoring and Maintenance Implementation Plan (MMIP) has also been prepared and presented in Section 6.

A certification signed by Yale University indicating that the remediation activities have been completed in accordance with the Notification and Approval is provided below.

Certification

In accordance with Condition 23 of EPA's September 19, 2011 PCB Cleanup and Disposal Approval under 40 CFR 761.61(c) and 761.79(h), Yale University hereby certifies that the authorized decontamination and disposal activities were implemented in accordance with the Approval and the Notification. A copy of the Final Completion Report and other documentation required by the Approval will be kept on file at the location indicated below and are available for EPA inspection, as set forth below.

Title

2. REMEDY IMPLEMENTATION

This section describes the PCB cleanup and disposal activities conducted at the Site under the Approval, consistent with the requirements of 40 CFR 761.61(c) and 761.69(h). Remediation activities began on September 26, 2011. Window replacement activities were concluded on December 12, 2011 and final encapsulation of building materials including verification inspections and testing were completed on March 8, 2012. As described in the previous section, due to the working condition of the building ventilation system, post-abatement monitoring was completed in March 2014 following repairs/upgrades to the ventilation system.

In accordance with Condition 14 of the Approval, a draft deed restriction was submitted to EPA on April 3, 2014. Upon receipt of EPA comments, the final deed restriction will be recorded and pursuant to Condition 23 of the Approval, a copy will be submitted to EPA.

The remedial approach consisted of the following:

- Removal and off-site disposal of ≥ 50 ppm PCB containing caulking and sealant with window frames and components as ≥ 50 ppm PCB waste (maximum PCB concentration was 270,000 ppm in caulking);
- Encapsulation of building materials formerly in direct with the caulking and that were scheduled to remain in place;
- Encapsulation of exterior and interior building materials located away from the former direct contact areas and which contained PCBs at concentrations above the high or low occupancy clean up levels, as applicable.

A summary of activities completed including, site preparations and controls, PCB impacted material removals, inspections and verification sample collection and analyses, and material disposal is presented in the following sections.

2.1 SITE PREPARATION AND CONTROLS

Prior to initiating the remediation activities, site preparations and controls were implemented as described in the PCB Remediation Plan. These preparations included the development of a Health & Safety Plan, Contractor Work Plan, assembly of scaffolding on the building, assembly of workspace enclosures, securing access to the active work areas through signage, and occupant relocation.

Standard Builders, Inc (SBI) personnel coordinated with Yale University staff to relocate all users to alternative areas to the greatest extent possible. All users were advised of the abatement project timeline and were asked to refrain from working in rooms where abatement activities were being conducted. Regardless, the remediation contractor (AAIS) constructed temporary steel framed enclosures with plywood sheeting at the interior of each window opening and lined these enclosures with polyethylene sheeting. Temporary enclosures were mounted directly to the interior concrete masonry unit (CMU) block wall prior to active removal of the specific window. Exterior to the windows, polyethylene sheeting was placed on the scaffolding around the work areas. Signs were displayed on each temporary enclosure. Removal of the windows and sealants was conducted from the outside of the building within full polyethylene containment and negative pressure controls. Water misting, HEPA filter equipped tools, and negative pressure controls with HEPA filtration were used to control dust.

Dust monitoring of areas outside of the containments was conducted during active removal activities by Woodard & Curran personnel or designated SBI personnel, in accordance with the dust monitoring plan included in Appendix D of the PCB Remediation Plan. A direct reading particulate meter (Thermo Electron Inc. PDR 1000-AN) was used to monitor total dust concentrations at a background location and at multiple stations surrounding the work areas at a frequency of once every two hours during active removal. The exact locations of the stations varied based on the work area.

Two readings were recorded above the project action limit for total dust during the work. On September 27, 2011 a total dust reading of 1.427 mg/m^3, which was above the action level, was recorded outside the poly containment on the scaffolding. Abatement work within the enclosure was immediately shut down and it was determined that the generator providing power to the HEPA vacuum for the negative air had been shut off during lunch when no abatement work was being conducted and had not been restarted. Inspection of the polysheeting also found a seam that was not fully sealed. The seam was sealed and the generator was restarted. A follow up dust meter reading recorded total dust as 0.105 mg/m^3. On October 14, 2011, a total dust reading of 0.287 mg/m^3, which was above the action level was recorded in Room 319. Work was stopped and all seams on the interior temporary enclosure were re-taped. The room was inspected and dust was not visible within the interior spaces (airborne or on horizontal surfaces). The dust meter was then placed in Room 319 and left to run for the next two hours prior to restarting work. During this two hour period (during which no work was being conducted) the time weighted average dust reading for the two hour period was 0.378 mg/m^3 indicating that the initial reading was not due to the remediation activities.

A copy of the dust monitoring logs is provided in Appendix B.

2.2 SAMPLING AND ANALYTICAL METHODS

Verification samples collected in support of the remediation activities described herein were collected in accordance with generally accepted procedures for environmental sampling. Masonry samples were collected consistent with the EPA Region I Standard Operating Procedure for Sampling Porous Surfaces for PCBs (May 2011). Surface wipe samples were collected using hexane-saturated gauze wipes in accordance with the standard wipe test method under 40 CFR 761.123. Post-abatement indoor air samples were collected in accordance with USEPA Compendium Method TO-10A "Determination of Pesticides and Polychlorinated Biphenyls in Ambient Air Using Low Volume Polyurethane Foam (PUF) Sampling Followed by Gas Chromatographic/Multi-Detector Detection (GC/MD)". Locations of verification samples are depicted graphically on Figures 2-1 through 2-4 and the locations of post-abatement samples are depicted on Figures 2-6 through 2-8.

Samples were transferred on ice to Con-Test Analytical Laboratory of East Longmeadow, Massachusetts under standard chain of custody procedures. Bulk and wipe samples were extracted using USEPA Method 3540C (Soxhlet extraction) and analyzed for PCBs using USEPA Method 8082. Indoor air samples were submitted for PCB Homolog analysis via USEPA Method 680A. Electronic versions of the laboratory analytical packages for the data presented in this section are provided in Appendix C.

2.3 CAULKING AND WINDOW REMOVAL

Caulking and glazing sealants associated with exterior windows scheduled to be removed throughout the Kline Geology Laboratory were identified as containing ≥ 50 ppm PCBs and as asbestos containing materials (ACM).

Typical Building Elevation

Following the construction of polyethylene containment and the establishment of site controls as described above, window caulking, glazing sealants, and frames and components (including glass) were removed using manual methods (hand tools, pry bars, etc.) for off-site disposal as a ≥ 50 ppm PCB and asbestos containing waste. A summary of the removal methods is as follows:

- The operational portion of each window was removed;

- Interior and exterior caulking was removed from the caulked joints;
- Window frames were removed from the opening using hand tools; and
- Residual caulking on the masonry surfaces was removed using electric removal tools.

All materials were double-wrapped in poly-sheeting at the point of generation and placed on a rolling cart for transport at the conclusion of each day through the building along a pre-determined route to the designated hazardous waste storage area via the loading dock. The waste transport routes were visually inspected following waste transport. Following completion of the removals within each work area, AAIS removed the exterior polyethylene enclosures. Interior enclosures remained in place until after the application of the liquid epoxy coatings. All disposable materials (poly-sheeting, PPE, etc.) were removed for disposal with the ≥ 50 ppm PCB waste.

As described in a December 12, 2011 submittal to EPA, a request for modification to the PCB Remediation Plan was submitted to allow for interior caulking and direct contact frame materials associated with the two windows located in Room 332 to temporarily remain in place and to not apply coatings to interior CMU wall materials adjacent to the windows. Note: the exterior perimeter caulking and window frames and components were removed and disposed of off-site. The request to temporary leave in place the interior components was based on the operation of Room 332 as a "clean room" due to sensitive geochemical metallic research and analyses. In a letter dated December 14, 2011, EPA approved the modification to include the temporary in-place management of PCB containing caulking and building materials located within Room 332 for a period of 2 years (or December 31, 2013). On October 14, 2013, a request was submitted to EPA to extend this period. This modification request was supplemented on February 27, 2014 and is currently under review.

2.4 ENCAPSULATION PILOT TEST ACTIVITIES

Prior to commencing remediation, pilot tests were conducted to assess the effectiveness of the selected liquid coatings in achieving the encapsulation target levels. A summary of analytical results from the pilot test sampling of the liquid coatings is summarized on Table 2-1 and presented below.

Following removal of a window from Room 106, one coat of ECI Fibertech F-50 penetrating primer followed by two coats of ECI Fibertech F-51 topcoat were applied to CMU and brick materials formerly in direct contact with the caulking. Following a 24-hour cure time, verification wipe samples were collected. Analytical results from the wipe samples indicated that PCBs were present above the encapsulation target of 1 µg/100cm^2 with reported concentrations of 5.5 µg/100cm^2 in the sample collected from the coated brick and 260 µg/100cm^2 in the sample collected from the coated CMU block.

Based on these results, the project team consulted a representative from Fibertech and developed alternate application methods including limited re-use of rollers, application in one direction (i.e., no back and forth motions), and an increased coating thickness. Following application of one additional primer coat and two additional topcoats, verification wipe samples were again collected at the completion of the 24-hour cure time. One wipe sample was collected from the coated brick and two were collected from the coated CMU block. Analytical results indicated that PCBs were present above the encapsulation target of 1 µg/100cm^2 with reported concentrations of 1.3 µg/100cm^2 in the sample collected from the coated brick and concentrations of 10 and 26 µg/100cm^2 in the samples collected from the coated CMU block.

Following receipt of the second round of data, the pilot test area was expanded to include additional window openings on the third floor and an alternate liquid coating for use on materials formerly in direct contact with the caulking was evaluated. The technical representative from Fibertech was again consulted including a site visit to observe the application of the coating in accordance with his previous recommendations. Openings from windows at four rooms, which had been removed during the pilot test activities, were coated with either one coat of ECI Fibertech F-50 penetrating primer followed by two coats of ECI Fibertech F-51 topcoat (three window openings) or with two coats of the Sikagard 62 liquid epoxy coating (one window opening). Verification wipe samples were collected

following either a 48-hour or 72-hour cure time from each of the coated surfaces. Analytical results indicated that PCBs were present at concentrations above the encapsulation target in samples collected from the surfaces coated with the Fibertech products following the 48 and 72-hour cure times (three samples collected from brick and three samples from CMU block). Results from the verification samples collected from the surfaces coated with the Sikagard 62 epoxy indicated that PCBs were below the target in samples collected from both the brick and CMU coated surfaces following the 72-hour cure time (results following the 48-hour cure time indicated that PCBs were present above the target in the sample collected from the brick, the sample collected from CMU was inadvertently destroyed by the laboratory prior to analysis).

To further evaluate the effectiveness of the Sikagard 62 product at different time intervals in relation to the timing of window replacement, a third coat was applied and verification samples were collected following a 5-hour and a 20-hour hold time. Results from the verification wipe samples collected indicated that PCBs were below the encapsulation target in all four samples collected.

Based on these results, the project team elected to apply three coats of Sikagard 62 liquid epoxy coating for the encapsulation of building materials formerly in direct contact with the caulking.

Prior to full implementation of the clear coat application to brick and brownstone materials not in direct contact with the caulking, the proposed encapsulant (KlenzSeal liquid sealant) was applied to materials in front of the Room 108 window to verify the effectiveness in the encapsulation of PCBs and to evaluate the visual impacts the sealant may have on the brick and brownstone. Verification wipe samples were collected following the application of two coats of the sealant. Analytical results indicated that PCBs were present at a concentration of 0.58 µg/100cm^2 on the surface of the coated brick and at a concentration of 2.1 µg/100cm^2 on the surface of the coated brownstone. Based on these results, an additional coating was applied to the brownstone and a verification wipe sample collected. Results indicated that PCBs were still present above the target with a reported concentration of 20 µg/100cm^2. Given this result the team selected a different product for application to the brownstone (see Section 2.7.2).

2.5 ENCAPSULATION OF BUILDING MATERIALS FORMERLY IN DIRECT CONTACT WITH CAULKING

Following caulking removal, all loose materials were removed from the window opening and the surfaces were cleaned with a non-phosphate detergent scrub in preparation for application of the liquid coating. The window openings were then vacuumed and spray foam insulation was installed in the cavity between the interior and exterior walls. Building materials formerly in direct contact with the interior and exterior caulking joints were encapsulated with three coats of Sikagard 62 liquid epoxy coating. The epoxy coating along exterior joints was extended to a distance of 5/8 inches from the former joint based on the construction of the replacement windows which had a 5/8-inch wider frame than the original windows allowing for the application of additional epoxy without having the epoxy be visible at project completion.

Former Direct Contact Materials Following Epoxy Application

Following application of the liquid epoxy, verification wipe samples were collected from the encapsulated surfaces at the frequency described in the Remediation Plan and submitted for PCB analysis. A total of 33 verification wipe samples were collected for analysis. A summary of analytical results is as follows:

- Interior CMU Block Materials (1 sample per every 4 windows; 20 samples) – Analytical results indicated that PCBs were either non-detect (18 samples at < 0.20 µg/100cm^2) or < 1 µg/100cm^2 (two samples with reported concentrations of 0.35 and 0.36 µg/100cm^2); and
- Exterior Brick/Brownstone Materials (1 sample per every 5 windows; 13 samples) – Analytical results indicated that PCBs were either non-detect (nine samples at < 0.20 µg/100cm^2) or < 1 µg/100cm^2 (four samples with reported concentrations of 0.21, 0.34, 0.49, and 0.85 µg/100cm^2).

Following review of the wipe results, replacement windows were installed in the window openings. The locations of the verification wipe samples are depicted on Figures 2-1 and 2-2. A summary of analytical results is presented on Table 2-2.

2.6 ENCAPSULATION OF INTERIOR BUILDING MATERIALS NOT IN DIRECT CONTACT WITH CAULKING

Interior wall surfaces adjacent to the windows consisted of CMU block (the majority of locations) and drywall (2 locations). As described in the PCB Remediation Plan, these materials (collectively referred to as CMU) were identified as containing PCBs at concentrations above the high occupancy clean up criteria of ≤ 1 ppm. In accordance with Section 5.2.2 of the PCB Remediation Plan, one coat of ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat were applied to CMU materials as follows:

- CMU walls from the removed interior caulked joints (coated with the epoxy) to the first 90 degree angle in the walls (i.e., the entire interior side of the perimeter building wall adjacent to a window);
- CMU walls above the upper horizontal caulked joint to the structural ceiling (i.e., the entire interior side of the perimeter building wall above a window including CMU block above and below the drop ceiling);
- In locations with fixed objects mounted on the wall, coating was applied to the CMU block on both sides of the object (in locations with drop ceilings, the ceiling tiles were removed and the liquid encapsulant applied to CMU block above the ceiling line).

Following application, 19 verification wipe samples were collected (approximately one sample per every four windows) from randomly selected locations. The random location was selected through the use of a random number generator for both the horizontal and vertical axis upon measuring the dimensions for each individual interior wall. Verification samples were collected from randomly selected locations as described in the September 1, 2011 Comment Response (Comment 8). Analytical results indicated that PCBs were either non-detect (10 samples at < 0.20 µg/100cm^2) or < 1 µg/100cm^2 (nine samples ranging from 0.21 to 0.88 µg/100cm^2). The locations of the verification wipe samples are depicted on Figures 2-1 and 2-2. A summary of analytical results is presented on Table 2-3.

Going forward, the interior CMU walls will be monitored as part of the long term maintenance and monitoring program as described in Section 6.

2.7 ENCAPSULATION OF EXTERIOR BUILDING MATERIALS NOT IN DIRECT CONTACT WITH CAULKING

Exterior building materials containing PCBs at concentrations above the applicable clean up criteria were managed in place through the application of a liquid sealant. Based on the differing potential for direct contact exposures, as described in detail in the PCB Remediation Plan and subsequently approved, both the high occupancy and low occupancy clean up criteria were applied as follows:

- High Occupancy Areas: The high occupancy cleanup criteria of ≤ 1 ppm total PCBs was applied to all first floor building materials adjacent to Type A windows on the north building elevation and to concrete materials surrounding the Type C basement level windows on the east elevation; and

- Low Occupancy Areas: The low occupancy cleanup criteria of ≤ 25 ppm total PCBs was applied to building materials adjacent to Type A windows on the first floor locations of the east (4 windows) and south (3 windows) elevations and to all second and third floor building materials adjacent to Type A and Type B windows. There are no first floor windows on the west elevation.

As noted above, based on the width of the replacement frames, materials to a distance of 5/8-inch from the former exterior caulked joints were managed as former direct contact materials for the purposes of encapsulation and verification testing.

In accordance with the PCB Remediation Plan, samples were collected from masonry materials adjacent to the exterior caulked joints at various distances to determine the extent of PCBs at concentrations above the high and low occupancy criteria, as well as to determine the extent of the encapsulated areas. A summary of the additional bulk sampling, encapsulation areas, and verification wipe sampling for each material is included in the following sections.

2.7.1 Brick

Bulk samples were collected to determine the extent of liquid coating application to brick materials within the window recess in high and low occupancy areas. Following sampling, the identified areas were encapsulated and verification wipe samples collected for PCB analyses. A summary of the brick encapsulation is presented in the following paragraphs, separated by high and low occupancy areas.

High Occupancy Areas

Analytical results from the three bulk samples collected within 0.5 inches of the former joint indicated that PCBs were present at concentrations of 0.31, 2.4, and 25 ppm. Based on these results, the project team made the decision to assume that brick materials within the entire window recess contained PCBs ≥ 1 ppm at all high occupancy locations (approximately four inches from the former caulked joint). To confirm that the extent of PCBs > 1 ppm did not extend beyond the window recess, four brick samples were collected at a distance of three inches from the caulked joints (one inch before the end of the window recess). Analytical results indicated that PCBs were non-detect in three samples (total PCBs < 0.1 ppm) and present at a concentration of 2.4 ppm in the fourth sample. Given that 3 of the 4 samples at this location were non-detect andthe area of coating application would extend beyond these sampling locations, the encapsulation was applied to the entire window recess. The locations of the verification bulk samples are depicted on Figures 2-3 and 2-4. A summary of analytical results is presented on Table 2-4.

Brick surfaces within the window recess (a distance of approximately four inches) were coated with three coats of KlenzSeal liquid sealant. Following application, verification wipe samples were collected from coated brick within each of the window recesses at a frequency of 1 sample per window. Analytical results from five of the seven samples indicated that PCBs were either non-detect (three samples at < 0.20 µg/100cm^2) or < 1 µg/100cm^2 (2 samples with concentrations of 0.58 and 0.92 µg/100cm^2). Results from two samples indicated that PCBs were present above the encapsulation target of ≤ 1 µg/100cm^2 with reported concentrations of 6 and 14 µg/100cm^2.

Based on these results, a fourth coat of KlenzSeal was applied to all high occupancy brick surfaces and verification samples were collected from two locations off-set from those previously reported as containing PCBs > 1µg/100cm^2. Analytical results from these wipe samples indicated that PCBs were below the encapsulation target with results of non-detect (< 0.20 µg/100cm^2) and a concentration of 0.51 µg/100cm^2. The locations of the verification wipe samples are depicted on Figures 2-1 and 2-2. A summary of the verification wipe sample results is presented on Table 2-5.

Based on these results, no additional remediation activities were conducted on brick within the high occupancy areas. These materials will be incorporated into the long term maintenance and monitoring program as described in Section 6.

Low Occupancy Areas

Bulk samples were collected within 0.5 inches or at a distance of 5/8-inches from the former caulked joints to determine PCB concentrations in materials beyond the extent of the replacement window frames and liquid epoxy coating in low occupancy areas (the distance was modified to 0.75 inches after the first three samples were collected based on the width of the replacement frames as described above). Analytical results indicated the following:

- PCBs were reported in five samples at concentrations < 25 ppm (total PCBs ranging from 0.43 to 12 ppm with an average reported concentration of approximately 3.7 ppm); and
- PCBs were reported at a concentration of 34 ppm in one sample. Based discussions with the remediation contractor residual demolition debris may have been left on the brick materials at this location following window removal. Following installation of the replacement window at this location, surficial debris was brushed away and the sample location was cleaned with an Alconox solution, rinsed with clean water, and allowed to air dry. Two follow-up verification samples were then collected from within the same recess. Analytical results indicated that PCBs were non-detect (< 0.10 ppm) in both samples.

Based on these results, brick window recesses in low occupancy areas met the cleanup level and therefore, an encapsulant was not applied to these areas. The locations of the verification bulk samples are depicted on Figures 2-3 and 2-4. A summary of the analytical results is presented on Table 2-4.

2.7.2 Brownstone

Bulk samples were collected to determine the extent of liquid coating application to brownstone materials in front of windows in high and low occupancy areas. A summary of the brownstone encapsulation is presented in the following paragraphs, separated by high and low occupancy areas.

High Occupancy Areas

Analytical results from the four bulk samples collected within 0.5 inches from the former joint indicated that PCBs were present at concentrations ranging from 4.6 to 29 ppm with an average of 15.4 ppm. Based on these results, the project team made the decision to assume that brownstone sill materials in all high occupancy areas contained PCBs ≥ 1 ppm. To confirm that the extent of PCBs > 1 ppm did not extend beyond the top face of the sill (approximately 24 inches wide), three brownstone samples were collected at a distance of six inches from the former caulked joints. Analytical results indicated that PCBs were present at concentrations of 0.98, 1.1, and 1.5 ppm. Based on these results, one additional sample of brownstone was collected at a distance of 20 inches from the former joint (four inches before the end of the sill). Analytical results from this sample indicated that PCBs were present at a concentration of 1.2 ppm. Given that PCB concentrations decreased with distance from the former caulked joint, concentrations were at or slightly above 1 ppm at distances greater than 6 inches and the area of coating application would extend beyond these sampling locations the encapsulation was applied to the entire upper horizontal face of the sill (i.e., to a distance of 24 inches from the joint). Verification bulk sample locations are depicted on Figures 2-3 and 2-4. A summary of analytical results is presented on Table 2-4. Following sampling, the identified areas were encapsulated and verification wipe samples collected for PCB analyses.

Based on the results of the pilot test (see Section 2.4), the project team evaluated a second penetrating sealant (Duroshine Invisi-Guard impregnating sealer) for the brownstone encapsulation. Three coats of Duroshine were applied to the entire horizontal brownstone sill and verification wipe samples collected at a frequency of one sample per window. Results from the verification wipe samples indicated that in five of the seven samples PCBs were non-detect (2 samples at < 0.20 µg/100cm^2) or < 1 µg/100cm^2 (three samples with concentrations of 0.55, 0.66, and 0.97 µg/100cm^2). Analytical results from the remaining two samples indicated that PCBs were present at concentrations of 1.1 and 3.2 µg/100cm^2.

Following review of these results, one additional coat of Duroshine was applied to all the horizontal sills in the high occupancy areas and verification samples were collected from locations off-set from those previously reported as containing PCBs above the encapsulation target (coats were applied over two events based on results above 1

µg/100cm^2 in follow up samples). Following application of the fifth coat and a subsequent two week cure time, analytical results indicated that PCBs were below the encapsulation target at all locations. The locations of the verification wipe samples are depicted on Figures 2-1 and 2-2. A summary of the verification sample results are presented in Table 2-5.

Based on these results, no additional remediation activities were conducted on brownstone within the high occupancy areas. These materials will be incorporated into the long term maintenance and monitoring program as described in Section 6.

Low Occupancy Areas

Bulk samples were collected within 0.5 inches or at a distance of 5/8-inches from the caulked joints to determine PCB concentrations in materials beyond the extent of the replacement window frames and liquid epoxy coating in low occupancy areas (the distance was modified to 0.75 inches after the first three samples were collected based on the width of the replacement frames as described above). Analytical results indicated the following:

- PCBs were reported at concentrations of 24, 33, and 200 ppm in the three samples collected within 0.5 inches of the former caulked joints; however, these materials were coated with liquid epoxy and covered by the replacement frames. Additional samples were collected at each of these three locations at a distance of six inches from the former caulked joints. Analytical results indicated that PCBs were present at concentrations of 1.2, 1.2, and 0.71 ppm, respectively.
- Analytical results from the eight initial verification samples collected at a distance of 0.75 inches from the former caulked joint indicated that PCBs were < 25 ppm in seven samples with reported concentrations ranging from 2.1 to 16 ppm. Results from the eighth sample, collected from a third floor window on the south elevation, indicated that PCBs were present at a concentration of 48 ppm. A follow up sample was collected from the brownstone sill at this location to confirm the initial results. Results from the follow up sample indicated that PCBs were present at a concentration of 49 ppm. Following receipt of this sample result, one sample was collected at a distance of 0.75 inches from the caulked joints at each of the three brownstone sills in the immediate vicinity to determine if PCBs were present at concentrations > 25 ppm on these sills as well. Analytical results indicated that PCBs were present at concentrations of 9.9, 12, and 12 ppm.

Based on the bulk sample results, all locations not covered by epoxy and the replacement window frames met the low occupancy clean-up level with the exception of one window sill (48/49 ppm) on the south elevation third floor. The locations of the verification bulk samples are depicted on Figures 2-3 and 2-4. A summary of the verification sample results are presented in Table 2-4.

Three coats of Duroshine were applied to the brownstone sill at this third floor location. Analytical results from the verification wipe sample collected after application indicated that PCBs were preset at a concentration of 0.36 µg/100cm^2. The location of the verification wipe sample is depicted on Figure 2-2. A summary of the analytical results is presented on Table 2-5.

2.7.3 Concrete Sill

One bulk sample was collected from concrete sill materials at the east elevation basement windows to determine if PCBs were present at concentrations > 1 ppm at the extent of the window recesses. Analytical results indicated that PCBs were present at a concentration of 0.17 ppm. Sample locations are depicted on Figure 2-4. A summary of analytical results is presented on Table 2-4.

In accordance with the Remediation Plan and Approval, three coats of a liquid coating (Duroshine) were applied to all concrete materials within the recess of the window openings (approximately 11 inches). In accordance with the September 1, 2011 Comment Response, one verification wipe sample was collected following application and a 24-hour cure time. Analytical results indicated that PCBs were present at a concentration above the target

encapsulation goal of 1 µg/100cm^2 with a reported concentration of 2.2 µg/100cm^2. Based on these results, one additional coating was applied to concrete materials within the five window recesses and a follow-up wipe sample collected. Results of the follow-up verification wipe sample indicated that PCBs remained above the target encapsulation goal with a reported PCB concentration of 1.7 µg/100cm^2. A fifth coating was then applied to the concrete and allowed to cure for two weeks prior to verification wipe sampling. Analytical results from this sample indicated that PCBs were non-detect (< 0.20 µg/100cm^2) in the sample. The locations of the verification wipe samples are depicted on Figure 2-2. A summary of the verification sample results are presented in Table 2-5.

Based on these results, no additional remediation activities were conducted on concrete sills. These materials will be incorporated into the long term maintenance and monitoring program as described in Section 6.

2.7.4 Plaster Ceiling

Two verification samples of plaster ceiling materials at the second and third floor Type B windows were collected to determine if PCBs were present at concentrations > 25 ppm in plaster ceiling materials located beyond the extent of the liquid epoxy coating and replacement window frames. Samples were collected at a distance of 0.75 inches from the former caulked joint. Analytical results indicated that PCBs were present at concentrations of 9.9 and 12 ppm. Sample locations are depicted on Figure 2-3. A summary of analytical results is presented on Table 2-4. Given these results, no additional remediation activities were conducted on plaster ceiling materials in these areas.

2.7.5 Terrazzo Floor

Two samples of terrazzo floor materials were collected at the second and third floor Type B windows to determine if PCBs were present at concentrations > 25 ppm beyond the extent of the liquid epoxy coating and replacement window frames. Analytical results indicated that PCBs were present at concentrations of 1.5 and 130 ppm at a distance of < 0.5 inches from the former joint. Upon communication from the project team that the replacement window frames would be 5/8-inch wider than the original plan, a follow up sample was collected at a distance of 0.75 inches from the former caulked joint to assess PCB concentrations at this distance. Analytical results indicated that PCBs were present at a concentration of 3.1 ppm. Sample locations are depicted on Figure 2-3. A summary of analytical results is presented on Table 2-4. As a result, it was determined that PCBs would be < 25 ppm in areas beyond the epoxy/new window frames and that no additional remediation activities were conducted on terrazzo floor in these areas.

2.8 ENCAPSULATION SUMMARY

As part of the remediation activities, the following materials and areas were encapsulated with liquid coatings:

- Masonry materials in former direct contact with window caulking – Three coats of Sikagard 62 liquid epoxy coating were applied to building materials formerly in direct contact with interior and exterior joints and to a distance of 5/8-inches from the joints at 72 window openings; these areas were also subsequently covered by the metal frames of the new windows.
- Interior CMU walls not in direct contact with former window caulking – One coat of ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat were applied to CMU materials from the window openings to the first 90-degree angle (i.e., the interior side of the exterior wall) both laterally and vertically (i.e., above the window to the ceiling).
- Exterior brick window recesses – Four coats of KlenzSeal liquid sealant were applied to brick surfaces within the window recess (a distance of approximately four inches) in high occupancy areas (first floor north elevation window recesses).
- Exterior brownstone window sills – Five coats of Duroshine Invisi-Guard impregnating sealer were applied to brownstone surfaces within the window recess (a distance of approximately 24 inches) in high occupancy

areas (first floor north elevation) and three coats were applied to brownstone surfaces within one window recess on the third floor south elevation (low occupancy area).

- Exterior Concrete sills – Five coats of Duroshine Invis-Guard impregnating sealer were applied to concrete sill materials within the window recess (a distance of approximately 11 inches) at the five basement windows.

The locations of the encapsulated areas are depicted on Figure 2-5.

2.9 POST ABATEMENT MONITORING

In accordance with Condition 12 (d) (iii) of the Approval, a Post-Abatement Indoor Air and Interior Surfaces Wipe Sampling Plan was prepared and submitted to the EPA on January 10, 2012. The plan was reviewed and accepted by EPA on February 13, 2012 (via email). As described previously, following completion of the overall building renovation project and prior to implementation of post-abatement indoor air monitoring, the building's ventilation system was modified/ improved. Given the pending modifications and renovations to the ventilation system, the collection of the post-abatement samples was deferred to after completion of the ventilation system upgrades. These upgrades were completed in January 2014 and the post abatement monitoring was conducted in March 2014. A summary of the post abatement monitoring results is provided in the following sections.

2.9.1 Indoor Air Monitoring

As described in the sampling plan, indoor air samples were collected from 13 rooms to evaluate PCB concentrations in indoor air following completion of the remediation activities and modifications to the ventilation system. The sample locations were selected based on the following rationale:

- Indoor air samples were collected from approximately 20% of the rooms with windows;
- Specific locations were spatially distributed on each floor by the types of rooms (office, lab, and conference room) on the respective floor with considerations given to locations previously sampled and differing ventilation configurations (i.e., samples were divided between the two major ventilation system zones);
- On each floor at least one sample was collected from each "type" of space.

A summary of the sample locations for each floor is as follows:

- Basement Level – Although the plan included the collection of one sample from the basement level storage room, access to the space was not available at the time of sample collection (an additional sample was collected from a second floor office space);
- First Floor – Four samples were collected from first floor locations (there are a total of 13 rooms on the first floor). The air samples were collected from two offices (including Room 110 which was previously sampled), one laboratory, and one conference room;
- Second Floor – Five samples were collected from second floor locations (there are a total of 29 rooms on the second floor). The air samples were collected from three offices, one laboratory, and one conference room (Room 208A which was previously sampled);
- Third Floor – Four samples were collected from third floor locations (there are a total of 25 rooms on the third floor). The air samples were collected from two offices (including Room 335 which was previously sampled) and two laboratories (including Room 344, which was previously sampled).

Analytical results indicated that PCB concentrations were below the project action level of 450 ng/m3 (EPA's published guidance for indoor air levels for adults in schools [September 2009]) with reported concentrations ranging from 9.5 to 378.8 ng/m^3. A comparison of the results between the pre-removal and post-abatement sampling events is as follows:

- Room A110 (First Floor Office Space) – Total PCBs decreased from 510 ng/m^3 to 130.1 ng/m^3 in the post-abatement sampling event (approximately 74% decrease);
- Room A208A (Second Floor Conference Room) – Total PCBs decreased from 99 ng/m^3 to 9.5 ng/m^3 in the post-abatement sampling event (approximately 90% decrease);
- Room A335 (Third Floor Office) – Total PCBs decreased from 600 ng/m^3 to 48.1 ng/m^3 in the post-abatement sampling event (approximately 92% decrease); and
- Room A344 (Third Floor Library) – Total PCBs decreased from 380 ng/m^3 to 50 ng/m^3 in the post-abatement sampling event (approximately 87% decrease).

Overall, PCB concentrations in indoor air decreased by between 74 and 92% from pre- to post-abatement sampling.

A summary of analytical results is presented on Table 2-6. The locations of the post-abatement air samples are depicted on Figures 2-6, 2-7, and 2-8.

2.9.2 Surface Wipe Sampling

As described in the sampling plan, surface wipe samples were collected from "accessible and high contact surfaces" proximate to the windows such as shelves, vents, and tables. One wipe sample was collected from each of the same 13 rooms as the indoor air samples.

Analytical results from the surface wipe samples indicated that PCBs were either non-detect (10 samples at < 0.20 µg/100 cm^2) or < 1 µg/100 cm^2 (3 samples with reported concentrations of 0.21, 0.24, and 0.25 µg/100 cm^2). The location of the verification wipe sample is depicted on Figures 2-6, 2-7, and 2-8. A summary of the analytical results is presented on Table 2-7.

2.10 RESTORATION

Following completion of PCB remediation activities, replacement windows were installed and building occupants returned to their spaces.

3. DATA USABILITY ASSESSMENT

This data usability assessment has been conducted to review the samples collected in support of the remediation and verification activities. Data validation and review was conducted by Woodard & Curran and a third-party validator, Data Check, Inc. of New Durham, New Hampshire. This review included a check of field documentation including sample collection and preservation methods, a check of the laboratory data and documentation, a review of the internal laboratory QA/QC procedures and results including surrogate recoveries, blank results, matrix spike (MS) and matrix spike duplicate (MSD) results, laboratory control standard (LCS) and laboratory control standard duplicate (LCSD) results, an evaluation of sample holding times, and field duplicate results. Data Check's data validation summaries are provided in Appendix C.

A summary of the data usability assessment for the data is presented below:

- All samples were extracted by USEPA Method 3540C (Soxhlet Extraction) and analyzed for PCBs by USEPA Method 8082.
- Consistent procedures and laboratory analysis of the data were achieved. Sample containers were packed on ice and delivered to the laboratory under standard chain of custody procedures. All samples were extracted and analyzed within allowable holding times for the method.
- Some samples were received at the laboratory outside the acceptable temperature range (4º Celsius +/- 2º). Detect and non-detect results for the eight samples collected on September 27, 2011 and associated with laboratory report 11I1022 were estimated based on this condition.
- The data packages were reviewed to ensure that all sample and associated quality assurance results were available. Results of the completeness review indicated that all collected samples were analyzed and all quality control results were available to complete the data validation process.
- Some samples were analyzed at dilutions due to the concentration of PCBs present in the samples and/or due to sample matrix. Elevated quantitation limits are reported in these samples as a result of the dilutions.
- A total of five field duplicate samples were collected during the sampling events to evaluate the precision of the verification sample results. Relative percent difference (RPD) between the primary and associated duplicate samples met the acceptance criteria with the exception of Aroclor 1254 results for one sample pair. Aroclor 1254 results for the primary and duplicate samples of this sample pair were estimated based on this evaluation.
- The RPD between sample column results for individual samples were evaluated to assess the precision of the results. The RPD between sample column results were evaluated and determined to be within the acceptance criteria (≤ 25 %) with the exception of four samples. Aroclor 1254 results from these samples were estimated based on this evaluation.
- Accuracy of the analytical data was assessed by reviewing the recoveries for MS, MSD, surrogates, LCS, and LCSD. Surrogate recoveries were identified outside the acceptance limits for one of the bulk samples; however, results were not qualified due to only one of the two surrogates being outside acceptance limits. Surrogate recoveries were outside the acceptance limit for one indoor air sample. Results have been qualified as estimated (J/UJ). RPD between MS/MSD samples were outside the acceptance criteria for seven samples; however, results were not qualified due to interferences from other Aroclors.
- No analytes were detected in the method blanks or the field blank samples collected during the sampling events with the exception of one field blank sample which was reported to contain Aroclor 1242. No qualifications were applied to the data since Aroclor 1242 was not detected in the associated samples.

Based on this review, the data adequately represents the materials tested, and the samples are considered usable for the purposes of characterizing PCB-affected media and verifying remediation efforts in accordance with 40 CFR Part 761.

4. WASTE STORAGE, DISPOSAL, AND EQUIPMENT DECONTAMINATION

Waste storage and disposal activities were completed in accordance with the procedures described in the PCB Remediation Plan. All caulking and building materials characterized as ≥ 50 ppm PCB waste were segregated as a single waste stream and handled as ≥ 50 ppm PCB waste.

Following use, non-disposable equipment and tools were decontaminated using a double wipe with hexane soaked rags following gross removal of any dust or debris. Following gross decontamination, poly-sheeting, PPE, disposable tools and other materials used during the PCB Remediation work were managed and disposed with the ≥ 50 ppm PCB waste.

Wastes generated during the project were collected in secured, lined and covered waste containers (roll-off containers or box trailers) in accordance 40 CFR 761.65. These containers were labeled and marked in accordance with 40 CFR 761.40. Through the end of the project, 13 tons of waste materials, located in three roll-off containers and one cubic yard box, were transported off-site under manifest for disposal to Environmental Quality's Wayne Disposal Landfill in Belleville, Michigan as ≥ 50 ppm PCB waste and asbestos.

Copies of PCB waste shipment records including manifests and certificates of disposal are provided in Appendix D.

5. LONG TERM MONITORING AND MAINTENANCE OF ENCAPSULATED SURFACES

Pursuant to Condition 15 of the Approval, a Monitoring and Maintenance Implementation Plan (MMIP) has been prepared to monitor the effectiveness of the remedy over time. The MMIP, which is being submitted in Appendix E, includes the following:

- A description of the monitoring and maintenance activities that will be conducted, including inspection criteria, frequency, and routine maintenance activities;
- Sampling protocols, sampling frequency, analytical criteria, and reporting requirements;
- A communications component which details how the maintenance and monitoring results will be communicated to EPA and personnel responsible for the building;
- A worker training component for maintenance workers or other persons that will be conducting work that could impact the building coatings/barriers; and
- A recordkeeping and reporting schedule to submit the results of the MMIP activities to EPA.

6. SUMMARY AND CONCLUSIONS

The PCB remediation activities described in this Report have been performed in accordance with the Notification and the conditions of EPA's September 19, 2011 Approval.

In summary:

- A total of 13 tons of ≥ 50 ppm PCB waste (caulking, window frames and components, etc.) contained in three roll-off containers and one cubic yard box were removed for off-site disposal as ≥ 50 ppm PCB wastes and asbestos at Environmental Quality's Wayne Disposal Landfill in Belleville, Michigan.
- Residual PCBs remaining in masonry surfaces of the building (at concentrations > 1 ppm) were encapsulated using a combination of liquid coatings and physical barriers. These areas include:
    - Masonry materials in former direct contact with window caulking and to a distance of 5/8-inches from the exterior joints at 72 window openings have been encapsulated with two coats of liquid epoxy coating and subsequently covered by the metal frames of the new windows.
    - Interior CMU walls not in direct contact with former window caulking from the window opening to the first 90-degree angle (i.e., the interior side of the exterior wall) both laterally and vertically (i.e., above the window to the ceiling) have been encapsulated with one coat of ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat.
    - Exterior brick surfaces within the window recess (a distance of approximately four inches) in high occupancy areas (seven windows on the first floor north elevation were encapsulated with four coats of KlenzSeal liquid sealant.
    - Exterior brownstone surfaces within the window recess (a distance of approximately 24 inches) in high occupancy areas (seven windows on first floor north elevation) were encapsulated with five coats of Duroshine Invisi-Guard impregnating sealer. Exterior brownstone surfaces within one window recess (a distance of approximately 24 inches) on the third floor of the south elevation (low occupancy area) were encapsulated with three coats of the Duroshine Invisi-Guard impregnating sealer.
    - Exterior concrete sills materials within the five window recesses (a distance of approximately 11 inches from the joints) on the east elevation of the basement were encapsulated with five coats of Duroshine Invis-Guard impregnating sealer.
- A draft deed notice was submitted to EPA on April 3, 2014 and is under review. Upon approval, the notice will be recorded and a certified copy submitted to the Agency.
- A long term monitoring and maintenance program will be implemented to assess and verify the coating's / barrier's effectiveness over time.

With the exception of the removal of windows from Room 332 (modification/extension is under review), no further work is warranted to meet the conditions of the Approval aside from the long term monitoring and reporting and deed notice recordation.

Notes:
Verification wipe samples collected in accordance with the standard wipe test method of 40 CFR 761.123 following application of one coat of ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat.
All samples analyzed by USEPA Method 8082 with Method 3540C (Soxhlet) extraction.

Notes:
Verification samples collected in accordance with EPA Region I Standard Operating Procedure for Sampling Porous Surfaces for PCBs (May 2011).
Total PCBs reported as Aroclor 1248 and/or 1254. No other Aroclors reported above the minimum laboratory reporting limits.
J = Analytical results estimated based on data validation. See Appendix C for additional information.
1. Follow-up sample collected to confirm analytical results of initial sample at this location (-101). See completion report text for additional information.

Notes:
Project Action Level based on EPA published guidance for indoor air in public schools (September 2009) as described in the *Plan for Initial Post-Abatement Indoor Air and Interior Surface Wipe Sampling* dated January 10, 2012.
Air samples collected in accordance with USEPA Compendium Method TO-10A "Determination of Pesticides and Polychlorinated Biphenyls In Ambient Air Using Low Volume Polyurethane Foam (PUF) Sampling Followed by Gas Chromatographic/Multi-Detector Detection (GC/MD)" and submitted for laboratory analysis of PCBs homologs.
J/UJ = Analytical results qualified as estimated based on results of data validation.

APPENDIX A: EPA APPROVAL

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION I
5 POST OFFICE SQUARE, SUITE 100
BOSTON, MASSACHUSETTS 02109-3912

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

SEP 19 2011

John Bollier, Associate Vice President
Yale University
2 Whitney Avenue, 7th Floor
New Haven, Connecticut 06510-1220

Re: PCB Decontamination and Disposal Approval under 40 CFR § 761.61(c) and § 761.79(h)
Kline Geology Laboratory
Yale University, New Haven, Connecticut

Dear Mr. Bollier:

This is in response to the Yale University (Yale) Notification[1] for approval of a proposed plan to address PCB contamination at the Kline Geology Laboratory (the Site) located at 210 Whitney Avenue, New Haven, Connecticut. The Site contains PCB-contaminated materials that exceed the allowable PCB levels under 40 CFR § 761.20(a), §761.61 and § 761.62. Specifically, PCBs have been found in window caulk and glazing and in the adjacent building substrates (i.e., concrete, concrete block (CMU), brick, brownstone, plaster and terrazzo tiles)

Yale has requested an approval under 40 CFR § 761.61(c) that includes the following activities:

- Remove and dispose of PCB caulk with greater than or equal to ($\geqslant$ 50 parts per million (ppm) in a TSCA approved or hazardous waste landfill;
- Remove *non-porous surfaces* (e.g., metal window frames and components, including glazing) in direct contact with PCB caulk, and dispose of as a $\geq$50 ppm waste in a TSCA approved or hazardous waste landfill;
- Conduct additional characterization sampling of exterior *porous surfaces* to define extent of PCB contamination for encapsulation; and,

[1] The Notification was prepared by Woodard & Curran on behalf of the Yale to satisfy the requirements under 40 CFR § 761.61(c) and § 761.79(h). Information was submitted dated August 5, 2011 (PCB Remediation Plan); September 1, 2011 (Response to EPA Comments); and, September 13, 2011 (email clarification on brownstone encapsulation). These submittals shall be referred to as the "Notification".

- Encapsulate PCB-contaminated *porous surfaces* (i.e., concrete, CMU, brick, brownstone, plaster and terrazzo tiles) with two coats of an elastomeric acrylic-based coating or liquid sealant if the PCB concentration is greater than (>) 1 ppm in areas considered to be *high occupancy areas* or > 25 ppm in areas considered to be *low occupancy areas* as defined in § 761.3.

Based on the EPA's review, the information provided in the Notification meets the requirements under § 761.62(a) and § 761.79(h) for abatement of PCB caulk and glazing and PCB-contaminated *non-porous surfaces* and § 761.61(c) for encapsulation of the PCB-contaminated *porous surfaces*. EPA finds that the proposed encapsulation of PCB-contaminated *porous surfaces* should effectively prevent direct exposure of these PCB-contaminated *porous surfaces* to building users provided the physical barriers are maintained. As such, EPA may approve the encapsulation under § 761.61(c).

Yale may proceed with its project in accordance with 40 CFR § 761.61(c); § 761.62(a); § 761.79(h); its Notification; and, this Approval, subject to the conditions of Attachment 1. Under this Approval, EPA is reserving its rights to require additional investigation or mitigation measures should EPA determine that the encapsulation is not effective in eliminating exposure to PCBs. Please note that Yale will be required to record a notation on the deed as required under § 761.61(a)(8) since PCBs at greater than (>) 1 ppm will remain on the Site.

This Approval only addresses cleanup and disposal of the *PCB bulk product waste* and *PCB remediation waste* identified in the Notification. In the event Yale identifies other PCB contamination at the Site, including but not limited to, other non-liquid PCB products or PCB-contaminated soils, Yale may modify its plan to clean up these PCBs in accordance with Attachment 1, Condition 17. Otherwise, Yale shall submit a separate plan to address cleanup of the PCB materials in accordance with 40 CFR 761.

This Approval does not release Yale from any applicable requirements of federal, state or local law, including the requirements related to cleanup and disposal of PCBs or other contaminants under the Connecticut Department of Energy and Environmental Protection (CT DEEP) regulations.

Questions and correspondence regarding this Approval should be directed to:

Kimberly N. Tisa, PCB Coordinator (OSRR07-2)
United States Environmental Protection Agency
5 Post Office Square, Suite 100
Boston, Massachusetts 02109-3912
Telephone: (617) 918-1527
Facsimile: (617) 918-0527

EPA shall not consider this project complete until it has received all submittals required under this Approval. Please be aware that upon EPA receipt and review of the submittals, EPA may request any additional information necessary to establish that the work has been completed in accordance with 40 CFR Part 761, the Notification, and this Approval.

Sincerely,

James T. Owens III, Director
Office of Site Remediation & Restoration

Attachment 1 – PCB Approval Conditions
Attachment 2 - *Standard Operating Procedure For Sampling Porous Surfaces for Polychlorinated Biphenyls (PCBs) Revision 4, May 5, 2011*

ATTACHMENT 1:

PCB DECONTAMINATION AND DISPOSAL APPROVAL CONDITIONS
KLINE GEOLOGY LABORATORY (the Site)
YALE UNIVERSITY
NEW HAVEN, CONNECTICUT

GENERAL CONDITIONS

1. This Approval is granted under the authority of Section 6(e) of the Toxic Substances Control Act (TSCA), 15 U.S.C. § 2605(e), and the PCB regulations at 40 CFR Part 761, and applies solely to the *PCB bulk product waste* and the *PCB remediation waste* located at the Site and identified in the Notification.

2. Yale University (Yale) shall conduct on-site activities in accordance with the conditions of this Approval and with the Notification.

3. In the event that the cleanup plan described in the Notification differs from the conditions specified in this Approval, the conditions of this Approval shall govern.

4. The terms and abbreviations used herein shall have the meanings as defined in 40 CFR § 761.3 unless otherwise defined within this Approval.

5. Yale must comply with all applicable federal, state and local regulations in the storage, handling, and disposal of all PCB wastes, including PCBs, PCB Items and decontamination wastes generated under this Approval. In the event of a new spill during response actions, Yale shall contact EPA within 24 hours for direction on PCB cleanup and sampling requirements.

6. Yale is responsible for the actions of all officers, employees, agents, contractors, subcontractors, and others who are involved in activities conducted under this Approval. If at any time Yale has or receives information indicating that Yale or any other person has failed, or may have failed, to comply with any provision of this Approval, it must report the information to EPA in writing within 24 hours of having or receiving the information.

7. This Approval does not constitute a determination by EPA that the transporters or disposal facilities selected by Yale are authorized to conduct the activities set forth in the Notification. Yale is responsible for ensuring that its selected transporters and disposal facilities are authorized to conduct these activities in accordance with all applicable federal, state and local statutes and regulations.

8. This Approval does not: 1) waive or compromise EPA's enforcement and regulatory authority; 2) release Yale from compliance with any applicable requirements of federal, state or local law; or 3) release Yale from liability for, or otherwise resolve any violations of federal, state or local law.

NOTIFICATION AND CERTIFICATION CONDITIONS

9. This Approval may be revoked if the EPA does not receive written notification from Yale of its acceptance of the conditions of this Approval within 10 business days of receipt.

10. Yale shall submit the following information for EPA review and/or approval:

    a. A certification signed by its selected abatement/demolition contractor, stating that the contractor(s) has read and understands the Notification, and agrees to abide by the conditions specified in this Approval;

    b. A contractor work plan, prepared and submitted by the selected demolition or abatement contractor(s) describing the containment and air monitoring that will be employed during abatement activities. This work plan should also include information on how and where wastes will be stored and disposed of, and on how field equipment will be decontaminated; and,

    c. A certification signed by the selected analytical laboratory, stating that the laboratory has read and understands the extraction and analytical method requirements and quality assurance requirements specified in the Notification and in this Approval.

DECONTAMINATION AND DISPOSAL CONDITIONS

11. To the maximum extent practical, engineering controls, such as barriers, and removal techniques, such as the use of HEPA ventilated tools, shall be utilized during removal processes. In addition, to the maximum extent possible, disposable equipment and materials, including PPE, will be used to reduce the amount of decontamination necessary.

12. PCB-contaminated building materials shall be abated and verification sampling and analysis shall be conducted as described below:

    a. All visible residues of PCB caulk and associated wastes, including PCB-contaminated window frames and components, shall be removed and disposed of as described in the Notification.

b. PCB-contaminated *porous surfaces* shall be encapsulated as described in the Notification. The following decontamination standards shall apply (i.e., encapsulation shall not be required):

i) *High Occupancy Areas*: less than or equal to ($\leq$ 1 part per million (ppm) PCBs

(1) Indoor *porous surfaces* (i.e., CMU)

(2) Exterior *porous surfaces* (i.e., brick and brownstone) on the north elevations of the first floor

(3) Exterior *porous surfaces* (i.e., concrete) on the east elevations of the basement

ii) *Low Occupancy Areas*: less than or equal to ($\leq$ 25 ppm PCBs

(1) Exterior *porous surfaces* (i.e., brick and brownstone) on the east and south elevations of the first floor

(2) Exterior *porous surfaces* (i.e., brick, brownstone, plaster, and terrazzo tiles) on the second and third floor

c. Following encapsulation of PCB-contaminated *porous surfaces*, post-encapsulation sampling shall be conducted to determine the effectiveness of the encapsulation.

i) Surface wipe samples shall be collected from encapsulated *porous surfaces*. Wipe sampling of encapsulated surfaces shall be performed on a surface area basis by the standard wipe test as specified in 40 CFR § 761.123 (i.e., $\mu g/100\ cm^2$).

ii) Chemical extraction for PCBs shall be conducted using Method 3500B/3540C of SW-846; and, chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another extraction or analytical method(s) is validated according to Subpart Q.

iii) In the event that PCB concentrations in the wipe samples are greater than (>) 1 $\mu g/100\ cm^2$, Yale shall contact EPA for further discussion and direction on alternatives.

d. Initial post-abatement indoor air sampling and indoor surface wipe sampling for PCBs shall be conducted to determine the impact of the abatement activities.

i) Initial post-abatement sampling

(1) Indoor air sampling shall be conducted in accordance with EPA Method TO-4A or TO-10A. Sufficient sample volumes shall be collected to provide a minimum laboratory reporting limit of less than (<) 0.05 $\mu g/m^3$. At a minimum, PCB analysis shall include PCB homologues and/or PCB congeners.

(2) Wipe sampling of indoor surfaces shall be performed on a surface area basis by the standard wipe test as specified in 40 CFR § 761.123 (i.e. $\mu g/100\ cm^2$). Chemical extraction for PCBs shall be conducted using Methods 3500B/3540C of SW-846 and chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another method(s) is validated according to Subpart Q.

ii) In the event that PCB concentrations in the wipe samples are greater than or equal to (≥) 1 $\mu g/100\ cm^2$ or air samples results are > 0.450 $\mu g/m^3$, Yale shall contact EPA for further discussion and direction on alternatives, which may include development of a site-specific risk exposure assessment.

iii) Within 7 days of receipt of this Approval, Yale shall submit a plan identifying the number and locations of the post-abatement air and surface wipe samples.

e. Yale shall submit a monitoring and maintenance implementation plan (MMIP) to monitor the long-term effectiveness of the encapsulants. (See Condition 15).

13. PCB waste (at any concentration) generated as a result of the activities described in the Notification, excluding any decontaminated materials, shall be marked in accordance with CFR 40 CFR § 761.40; stored in a manner consistent with 40 CFR § 761.65; and, disposed of in accordance with 40 CFR § 761.61 or § 761.62, unless otherwise specified below.

a. Decontamination wastes and residues shall be disposed of in accordance with 40 CFR § 761.79(g)(6).

b. Moveable equipment, tools, and sampling equipment shall be decontaminated in accordance with either 40 CFR § 761.79(b)(3)(i)(A), § 761.79(b)(3)(ii)(A), or § 761.79(c)(2).

c. PCB-contaminated water generated during decontamination shall be decontaminated in accordance with 40 CFR § 761.79(b)(1) or disposed of under § 761.60.

DEED RESTRICTION AND USE CONDITIONS

14. Within thirty (30) days of completing the activities described in the Notification and in the Approval, Yale shall submit for EPA review and approval, a draft deed restriction for the Site. The deed restriction shall include: a description of the extent and levels of contamination at the Site following abatement; a description of the actions taken at the Site; a description of the use restrictions for the Site; and the long-term monitoring and maintenance requirements on the Site. Within seven (7) days of receipt of EPA's approval of the draft deed restriction, Yale shall record the deed restriction. A copy of this Approval shall be attached to the deed restriction.

INSPECTION, MODIFICATION AND REVOCATION CONDITIONS

15. Within 60 days of completion of the work authorized under this Approval, Yale shall submit for EPA's review and approval, a detailed monitoring and maintenance implementation plan (MMIP) for the surface barriers. Yale shall incorporate any changes to the MMIP required by EPA.

    a. The MMIP shall include: a description of the activities that will be conducted, including inspection criteria, frequency, and routine maintenance activities; sampling protocols, sampling frequency, and analytical criteria; and, reporting requirements, as applicable.

    b. The MMIP shall include a communications component which details how the maintenance and monitoring results will be communicated to the Site users, including parents, students, other on-site workers, and interested stakeholders.

    c. The MMIP also shall include a worker training component for maintenance workers or for any person that will be conducting work that could impact the barriers encapsulating the PCB-contaminated surfaces.

    d. Yale shall submit the results of these long-term monitoring and maintenance activities to EPA. Based on its review of the results, EPA may determine that modification to the MMIP is necessary in order to monitor and/or evaluate the long-term effectiveness of the barriers.

    e. Activities required under the MMIP shall be conducted until such time that EPA determines, in writing, that such activities are no longer necessary.

16. Yale shall allow any authorized representative of the Administrator of the EPA to inspect the Site and to inspect records and take samples as may be necessary to determine compliance with the PCB regulations and this Approval. Any refusal by Yale to allow such an inspection (as authorized by Section 11 of TSCA) shall be grounds for revocation of this Approval.

17. Any modification(s) in the plan, specifications, or information submitted by Yale, contained in the Notification, and forming the basis upon which this Approval has been issued, must receive prior written approval from the EPA. Yale shall inform the EPA of any modification, in writing, at least ten (10) days prior to such change. No action may be taken to implement any such modification unless the EPA has approved of the modification, in writing. The EPA may request additional information in order to determine whether to approve the modification. If such modification involves a change in the use of the Site which results in exposures not considered in the Notification, the EPA may revoke, suspend, and/or modify this Approval upon finding that this risk-based cleanup and disposal action may pose an unreasonable risk of injury to health or the environment due to the change in use. EPA may take similar action if the EPA does not receive requested information needed from Yale to make a determination regarding potential risk.

18. Any departure from the conditions of this Approval without prior, written authorization from the EPA may result in the revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.

19. Any misrepresentation or omission of any material fact in the Notification or in any future records or reports may result in the EPA's revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.

20. Approval for these activities may be revoked, modified or otherwise altered: if EPA finds a violation of the conditions of this Approval or of 40 CFR Part 761, including EPA's PCB Spill Cleanup Policy, or other applicable rules and regulations; if EPA finds that these activities present an unreasonable risk to public health or the environment; if EPA finds that there is migration of PCBs from the Site; or if EPA finds that changes are necessary to comply with new rules, standards, or guidance for such approvals. Yale may apply for appropriate modifications in the event new rules, standards, or guidance comes into effect.

RECORDKEEPING AND REPORTING CONDITIONS

21. Yale shall prepare and maintain all records and documents required by 40 CFR Part 761, including but not limited to the records required under Subparts J and K. A written record of the decontamination and disposal and the analytical sampling shall be established and maintained by Yale in one centralized location, until such time as EPA approves in writing a request for an alternative disposition of such records. All records shall be made available for inspection to authorized representatives of EPA.

22. As required under Condition 15 of this Approval, Yale shall submit the results of the long-term monitoring and maintenance activities to EPA as specified in the final MMIP to be approved by EPA.

23. Yale shall submit a final report to the EPA within 90 days of completion of the activities authorized under this Approval. At a minimum, this final report shall include: a short narrative of the project activities; characterization and confirmation sampling analytical results, including indoor air and surface wipe sampling; copies of the accompanying analytical chains of custody; field and laboratory quality control/quality assurance checks; an estimate of the quantity of PCB waste disposed of and the size of the PCB cleanup area(s); copies of manifests and bills of lading; and copies of certificates of disposal or similar certifications issued by the disposer. The Report shall also include a copy of the recorded deed restriction and a certification signed by a Yale official verifying that the authorized activities have been implemented in accordance with this Approval and the Notification.

24. Required submittals shall be mailed to:

    Kimberly N. Tisa, PCB Coordinator
    United States Environmental Protection Agency
    5 Post Office Square, Suite 100 – (OSRR07-2)
    Boston, Massachusetts 02109-3912
    Telephone: (617) 918-1527
    Facsimile: (617) 918-0527

25. No record, report or communication required under this Approval shall qualify as a self-audit or voluntary disclosure under EPA audit, self-disclosure or penalty policies.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11H1207

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: New Haven, CT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VWC-001	11H1207-01	Wipe		SW-846 8082A	
KGL-VWB-002	11H1207-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11H1207-01[KGL-VWC-001]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: SD DATE: 8/31/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.1

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

B037907-BLK1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-20	Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.

Sample Receipt Checklist

CLIENT NAME: Yale EHS **RECEIVED BY:** CFC **DATE:** 9/23/11

1) Was the chain(s) of custody relinquished and signed? (Yes) **No** **No CoC Included**

2) Does the chain agree with the samples? (Yes) **No**

If not, explain:

3) Are all the samples in good condition? (Yes) **No**

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? **Yes** **No** **N/A**

Temperature °C by Temp blank _____ Temperature °C by Temp gun 20-5°C

5) Are there Dissolved samples for the lab to filter? **Yes** (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) **No**

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other ~~glass~~ jar	
Other		(Other) Small Glass Jar	5

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11J0031-01[KGL-VW-018], 11J0031-02[KGL-VW-019], 11J0031-03[KGL-VW-020], 11J0031-06[KGL-VW-023], 11J0031-07[KGL-VW-024], 11J0031-08[KGL-VW-025]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: PB DATE: 10/3/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included

2) Does the chain agree with the samples? (Yes) No
If not, explain:

3) Are all the samples in good condition? (Yes) No
If not, explain:

4) How were the samples received:
On Ice [X] Direct from Sampling [ ] Ambient [ ] In Cooler(s) [X]

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.5

5) Are there Dissolved samples for the lab to filter? Yes (No)
Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No
Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/(clear) jar	8
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B038238-MS1, B038238-MSD1, B038239-MS1, B038239-MSD1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11I1022-07[KGL-VBR-007], 11I1022-09[KGL-VBR-009], 11I1022-12[KGL-VBB-012]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: SD DATE: 9/28/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☐ Direct from Sampling ☑ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 12.6

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0105

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale-Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VW-034	11J0105-01	Wipe		SW-846 8082A	
KGL-VW-035	11J0105-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodward and Curran RECEIVED BY: C. C-S. DATE: 10/4/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice [✓] Direct from Sampling [ ] Ambient [ ] In Cooler(s) [✓]

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.9

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 14

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** CEC **DATE:** 10/5/11

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☑ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 10.0°

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0213

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale-Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VW-038	11J0213-01	Wipe		SW-846 8082A	
KGL-VW-039	11J0213-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** CFC **DATE:** 10/6/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 17.1

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0058

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale University-Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VBT-017	11J0058-01	Soil		SM 2540G

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B038449-MS1, B038449-MSD1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11J0058-05[KGL-VBR-029]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran. RECEIVED BY: SD DATE: 10/3/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 6.0

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)	3	2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0267

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale - Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
K GL-VW-041	11J0267-01	Wipe		SW-846 8082A	
K GL-VW-042	11J0267-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Carran **RECEIVED BY:** CEC **DATE:** 10/7/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.1°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified Ext Date 10/7/11 Time 1735

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0433

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale-Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VW-043	11J0433-01	Wipe		SW-846 8082A	
KGL-VW-044	11J0433-02	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Project Chemist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** PB **DATE:** 10/13/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.6

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

Affirmative response to Questions A throughF is required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☑ Yes ☐ No[1]
B	Were the analytical method(s) and all associated QC requirements specificed in the selected CAM protocol(s) followed?	☑ Yes ☐ No[1]
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No[1]
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, Quality Assurance and Quality Control Guidlines for the Acquisition and Reporting of Analytical Data?	☑ Yes ☐ No[1]
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	☐ Yes ☐ No[1]
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No[1]
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all No responses to Qestions A through E)?	☑ Yes ☐ No[1]

A response to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☑ Yes ☐ No[1]

***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC perfomance standards specified in the CAM protocol(s) achieved?	☑ Yes ☐ No[1]
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes ☐ No[1]

[1] *All Negative responses must be addressed in an attached Environmental Laboratory case narrative.*

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran RECEIVED BY: CEC DATE: 10/14/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.5 C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 14

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	4
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

PROJECT NUMBER: 224415

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0340

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale - Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VBR-040	11J0340-01	Solid		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 10/18/2011 - Sample matrix revised per clients request.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B039050-MS1, B039050-MSD1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11J0340-01[KGL-VBR-040]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Project Chemist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran RECEIVED BY: CEC DATE: 10

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No
If not, explain:

3) Are all the samples in good condition? Yes No
If not, explain:

4) How were the samples received:
On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.2

5) Are there Dissolved samples for the lab to filter? Yes No
Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	1
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** mlk **DATE:** 10/17/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 6°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: log-in

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodward and Luran RECEIVED BY: C.C.S. DATE: 10/19/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.8°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	3
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** SD **DATE:** 10/24/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.3

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

Project Location: Yale-Kline Geo
Sample Description:
Work Order: 11J0955

Date Received: 10/26/2011

Field Sample #: KGL-VBQ-080
Sampled: 10/26/2011 00:00

Sample ID: 11J0955-08

Sample Matrix: Equipment Blank Water

Polychlorinated Biphenyls By GC/ECD

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** SD **DATE:** 10/26/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No **No CoC Included**

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	7
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No (N/A) _____

Do all samples have the proper Base pH: Yes No (N/A) _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11K0197-05[KGL-VBR-101]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Woodward and Curran **RECEIVED BY:** C.C.S. **DATE:** 11/7/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No **No CoC Included**

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice [✓] Direct from Sampling [ ] Ambient [ ] In Cooler(s) [✓]

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9°C

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard & Carran RECEIVED BY: CEC DATE: 11/9/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.6c

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 14

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	4
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** C.C-S. **DATE:** 11/14/11

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	1
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11K0793

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale - Kline - Geo Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VWC-119	11K0793-01	Wipe		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11K0892

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale-Kline Geo

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VBR-119	11K0892-01	Product/Solid		SW-846 8082A	
KGL-VWC-120	11K0892-02	Wipe		SW-846 8082A	
KGL-VWC-121	11K0892-03	Wipe		SW-846 8082A	
KGL-VWC-122	11K0892-04	Wipe		SW-846 8082A	
KGL-VWC-123	11K0892-05	Wipe		SW-846 8082A	
KGL-VWD-124	11K0892-06	Wipe		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B041778-MS1, B041778-MSD1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11K0892-01[KGL-VBR-119]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** SD **DATE:** 11/28/17

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.1

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	6
500 mL Amber		4 oz amber/clear jar

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11K1012

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale Univ - Kline Geo Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VWC-125	11K1012-01	Wipe		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** C.C.S. **DATE:** 11/30/11

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☐ Direct from Sampling ☑ Ambient ☑ In Cooler(s) ☐

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 6.8°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** CCS **DATE:** 12/7/11

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.0°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 12/16/2011 - Sample IDs -03 through -09 revised.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard & Curran **RECEIVED BY:** CFC **DATE:** 12/14/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2-8c

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	7
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11I1101

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale - Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VBB-014	11I1101-01	Brick		SW-846 8082A	
KGL-VBT-015	11I1101-02	Product/Solid		SW-846 8082A	
KGL-VBC-016	11I1101-03	Concrete		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 12/29/2011 - Sample IDs for 11I1101-02 &-03 revised per clients request.

SW-846 8082A

Qualifications:

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11I1101-02[KGL-VBT-015]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Project Chemist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: W+C **RECEIVED BY:** PB **DATE:** 9/29/11

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.9

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)	3	2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 11J0106

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Yale-Kline Geology Lab

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
KGL-VBR-031	11J0106-01	Brick		SW-846 8082A	
KGL-VBR-032	11J0106-02	Brick		SW-846 8082A	
KGL-VBRD-033	11J0106-03	Brick		SW-846 8082A	

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 12/29/2011 - Sample ID revised for 11J0106-03 per clients request.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B038532-MS1, B038532-MSD1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11J0106-02[KGL-VBR-032]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodward and Curran **RECEIVED BY:** C.C.-S. **DATE:** 10/4/11

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.9

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 12/29/2011 - Sample IDs revised for 11J0768-02 through -04 per clients request.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** PB **DATE:** 10/20/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No **No CoC Included**

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.5

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	4
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REvISED REPORT - 12/29/2011 - Sample ID revised for 11J1080-04 per clients request.

SW-846 8082A

Qualifications:

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

B040288-MSD1, B040288-MS1

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

11J1080-06[KGL-VBB-086]

Surrogate recovery is outside of control limits on confirmatory column, but within control limits on primary column. Data validation is not affected.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl [2C]

11J1080-10[KGL-VBQ-091]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.
S-12	Surrogate recovery is outside of control limits on confirmatory column, but within control limits on primary column. Data validation is not affected.

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodward and Curran **RECEIVED BY:** C.C-S. **DATE:** 10/28/11

1) Was the chain(s) of custody relinquished and signed? (Yes) No **No CoC Included**

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.6°C

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	1	8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	9
250 mL Amber (8oz amber)	1	2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

YALE KLINE GEOLOGY LABORATORY - PROJECT SUMMARY

Con-Test Analytical Laboratory Job Numbers: 11H1207, 11I0877, 11I1022, 11I1101, 11J0031, 11J0058, 11J0105, 11J0106, 11J0148, 11J0213, 11J0267, 11J0340, 11J0433, 11J0522, 11J0549, 11J0652, 11J0768, 11J0878, 11J0955, 11J1080, 11K0050, 11K0196, 11K0197, 11K0313, 11K0442, 11K0575, 11K0793, 11K0892, 11K1012, 11L0254, & 11L0545

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 2.0, 2.5, 2.6, 2.8, 2.9, 3.1, 3.2, 3.5, 3.8, 4.1, 4.8, 4.9, 5.3, 5.5, 5.6, 5.9, 6.0, 6.8, 10.0, 17.1, 18.6, and 20.5 degrees Celsius. Although some samples were received above 6.0 degrees Celsius, all but the following were collected on the same day they were submitted to the laboratory: KGL-VBR-001 (11I1022-01), KGL-VBR-002 (11I1022-02), KGL-VBR-003 (11I1022-03), KGL-VBR-004 (11I1022-04), KGL-VBR-005 (11I1022-05), KGL-VBR-006 (11I1022-06), KGL-VBR-007 (11I1022-07), and KGL-VBR-008 (11I1022-08). Detected and non-detected results in samples KGL-VBR-001 (11I1022-01), KGL-VBR-002 (11I1022-02), KGL-VBR-003 (11I1022-03), KGL-VBR-004 (11I1022-04), KGL-VBR-005 (11I1022-05), KGL-VBR-006 (11I1022-06), KGL-VBR-007 (11I1022-07), and KGL-VBR-008 (11I1022-08) were estimated (J/UJ) since temperature criteria were not met. No qualifications will be applied to other samples whose temperatures exceeded the upper calibration limit since they were collected the same day they were submitted to the laboratory.

PCBs:

All polychlorinated biphenyl compound (PCB) samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB surrogates met acceptance criteria (30%-150%) or were diluted out with the following exception:

LAB ID	SAMPLE ID	TCX (%/%)	DCB (%/%)	QUALIFIER
11J1080-10	KGL-VBQ-091	OK/OK	OK/29.8	None, only one out

TCX = tetrachloro-m-xylene DCB = decachlorobiphenyl

The PCB method blanks were non-detect (ND) for all target analytes. No qualifications will be applied.

PCB field blank samples KGL 106-SW/BL (11I0877-05), KGL-VBQ-060 (11J0652-02), KGL-VBQ-080 (11J0955-08), KGL-VBQ-091 (11J1080-10), and KGL-VQ-136 (11L0545-10) were ND for all target analytes with the following exception. Aroclor-1242 (0.30 µg/L) was detected above the reporting limit (RL) in sample KGL-VQ-136 (11L0545-10). Since this compound was not detected in the associated samples, no qualifications will be applied.

The PCB matrix spike/matrix spike duplicate (MS/MSD) performed on samples KGL-VBR-001 (11I1022-01), KGL-VBR-009 (11I1022-09), KGL-VBT-017 (11J0058-01), KGL-VBR-031 (11J0106-01), KGL-VBR-040 (11J0340-01), KGL-VBB-059 (11J0652-01), KGL-VBR-084 (11J1080-04), and KGL-VBR-119 (11K0892-01) met recovery (40%-140%) and relative percent difference (RPD) acceptance criteria with the following exceptions:

LAB ID	SAMPLE ID	PCB-1016 (%) MS/MS/MSD/MSD	PCB-1260 (%) MS/MS/MSD/MSD	QUALIFIER
11I1022-01	KGL-VBR-001	150/808/165/959	1060/1070/1360/1340	None, Aroclor-1254 interference
11I1022-09	KGL-VBR-009	1180/13300/991/10900	23100/19400/18900/16100	None, Aroclor-1254 interference
11J0058-01	KGL-VBT-017	OK/164/OK/161	335/442/357/447	None, Aroclor-1254 interference
11J0106-01	KGL-VBR-031	OK/160/OK/142	216/239/212/232	None, Aroclor-1254 interference
11J0340-01	KGL-VBR-040	146/2090/158/2430	2000/2550/2460/3060	None, Aroclor-1254 interference
11J1080-04	KGL-VBR-084	OK/168/142/176	617/663/652/694	None, Aroclor-1254 interference

YALE KLINE GEOLOGY LABORATORY - PROJECT SUMMARY

Con-Test Analytical Laboratory Job Numbers: 11H1207, 11I0877, 11I1022, 11I1101, 11J0031, 11J0058, 11J0105, 11J0106, 11J0148, 11J0213, 11J0267, 11J0340, 11J0433, 11J0522, 11J0549, 11J0652, 11J0768, 11J0878, 11J0955, 11J1080, 11K0050, 11K0196, 11K0197, 11K0313, 11K0442, 11K0575, 11K0793, 11K0892, 11K1012, 11L0254, & 11L0545

LAB ID	SAMPLE ID	PCB-1016 (%) MS/MS/MSD/MSD	PCB-1260 (%) MS/MS/MSD/MSD	QUALIFIER
11K0892-01	KGL-VBR-119	936/3880/917/3790	4020/3650/3970/3560	None, Aroclor-1254 interference

The PCB laboratory control samples (LCS)/laboratory control sample duplicate (LCSD) met acceptance criteria. No qualifications will be applied.

PCB field duplicate samples KGL-VBR-031 (11J0106-01)/KGL-VBRD-033 (11J0106-03), KGL-VBR-073 (11J0955-01)/KGL-VBRD-074 (11J0955-02), KGL-VWC-107 (11K0313-03)/KGL-VWCD-108 (11K0313-04), and KGL-VWC-123 (11K0892-05)/KGL-VWD-124 (11K0892-06) met acceptance criteria. No qualifications will be applied.

The RPD between the column results for all detected PCBs met acceptance criteria (≤25%) with the following exceptions:

LAB ID	SAMPLE ID	PCB	RPD	QUALIFIER
11J0148-02	KGL-VW-037	1254	30.2	J
11K0050-02	KGL-VBP-094	1254	30	J
11K0050-04	KGL-VBP-096	1254	27	J

Many samples were analyzed at a dilution due to the high concentration of PCB-1254. RL are elevated in these samples as a result of the dilutions performed.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: SD DATE: 1/13/12

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.1

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	18
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** AP **DATE:** 1/26/12

1) Was the chain(s) of custody relinquished and signed? Yes No **No CoC Included**

2) Does the chain agree with the samples? Yes No

If not, explain:

3) Are all the samples in good condition? Yes No

If not, explain:

4) How were the samples received:

On Ice ☑ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☑

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.0°C

5) Are there Dissolved samples for the lab to filter? Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: Login

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	5 Hex Wipes
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 02/21/2012 - Sample 12B0526-02 ID revised per clients request.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran RECEIVED BY: PR DATE: 1/18/12

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.8

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? (Yes) No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	4
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

YALE KLINE GEOLOGY LABORATORY
VERIFICATION WIPE SAMPLES - PROJECT SUMMARY

Con-Test Analytical Laboratory Job Numbers: 12A0413, 12A0526, and 12A0814

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 2.1, 2.8, and 4.0 degrees Celsius. No qualifications will be applied.

PCBs:

All polychlorinated biphenyl compound (PCB) samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB surrogates met acceptance criteria. No qualifications will be applied.

The PCB method blanks were non-detect (ND) for all target analytes. No qualifications will be applied.

No PCB field blank samples were submitted with these analytical packages. No qualifications will be applied.

No PCB matrix spike/matrix spike duplicate (MS/MSD) was performed on a sample from these analytical packages. No qualifications will be applied.

The PCB laboratory control samples (LCS)/laboratory control sample duplicate (LCSD) met acceptance criteria. No qualifications will be applied.

PCB field duplicate samples KGL-VWC-152 (12A0413-16)/KGL-VWCD-153 (12A0413-17) met relative percent difference (RPD) acceptance criteria (<50%) with the exception of Aroclor-1254 (79%). The detected Aroclor-1254 results in samples KGL-VWC-152 (12A0413-16) and KGL-VWCD-153 (12A0413-17) will be estimated (J) due to high field duplicate RPD.

The RPD between the column results for all detected PCBs met acceptance criteria. No qualifications will be applied.

Several samples were analyzed at a dilution due to the high concentration of PCB-1254. RL are elevated in these samples as a result of the dilutions performed.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

con-test® ANALYTICAL LABORATORY

Sample Receipt Checklist

CLIENT NAME: Woodard + Curran **RECEIVED BY:** PB **DATE:** 3/9/12

1) Was the chain(s) of custody relinquished and signed? (Yes) No No CoC Included

2) Does the chain agree with the samples? (Yes) No

If not, explain:

3) Are all the samples in good condition? (Yes) No

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? (Yes) No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.3

5) Are there Dissolved samples for the lab to filter? Yes (No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes (No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored: 19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature:

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	2
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____

Bisulfate _____ # DI Water _____

Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A _____

Do all samples have the proper Base pH: Yes No N/A _____

YALE KLINE GEOLOGY BROWNSTONE VERIFICATION WIPE SAMPLES
PROJECT SUMMARY

Con-Test Analytical Laboratory Job Number: 12C0246

A modified Tier II validation was performed on the data. The criteria detailed below were used to qualify the data. Raw data were not used to verify the results reported by the laboratory.

Samples were received at 2.3 degrees Celsius. No qualifications will be applied.

PCBs:

All polychlorinated biphenyl compound (PCB) samples were extracted and analyzed within technical holding times. No qualifications will be applied.

All PCB surrogates met acceptance criteria. No qualifications will be applied.

The PCB method blanks were non-detect (ND) for all target analytes. No qualifications will be applied.

No PCB field blank samples were submitted with this analytical package. No qualifications will be applied.

No PCB matrix spike/matrix spike duplicate (MS/MSD) was performed on a sample from this analytical package since these were wipe samples. No qualifications will be applied.

The PCB laboratory control samples (LCS)/laboratory control sample duplicate (LCSD) met acceptance criteria. No qualifications will be applied.

No PCB field duplicate samples were submitted with this analytical package. No qualifications will be applied.

1. INTRODUCTION

This Monitoring and Maintenance Implementation Plan (MMIP) has been prepared by Woodard & Curran on behalf of Yale University pursuant to Condition 15 of the U.S. Environmental Protection Agency's (EPA) September 19, 2011 PCB Decontamination and Disposal Approval under 40 CFR 761.61(c) and 761.79(h) (the Approval) for the Kline Geology Laboratory. This plan presents the monitoring and maintenance activities that will be conducted to assess the long-term effectiveness of the encapsulants applied, as an interim measure, to residual concentrations of polychlorinated biphenyls (PCBs) detected on interior and exterior masonry surfaces at certain areas of the Kline Geology Laboratory located at 210 Whitney Avenue on Yale's New Haven, Connecticut campus (see Figure 1-1).

1.1 BACKGROUND

The Kline Geology Laboratory is a three story building primarily utilized as a graduate research laboratory and includes laboratories, lecture halls, student and faculty offices, and a library on the third floor. The Kline Geology Laboratory Building is located in the Science Hill area of the Yale campus and is surrounded by Whitney Avenue to the east, parking areas to the north, University laboratories to the west, and a museum to the south. Surrounding ground surfaces are generally flat or slightly sloped away from the building and are either covered with asphalt pavement, brownstone, concrete, or landscaped areas. A Site Locus Map is provided as Figure 1-1. As described in the Notification[1], ≥ 50 ppm PCBs and sealants were detected in caulking around building perimeter windows.

1.2 REMEDIATION SUMMARY

The PCB remediation activities performed at the Kline Geology Laboratory are described in detail in the PCB Remediation Completion Report, which is being submitted to EPA concurrently with this MMIP. In summary, the activities performed to remediate ≥ 50 ppm PCB containing caulking and adjacent building materials included the following activities:

- Removal and off-site disposal of ≥ 50 ppm PCB containing caulking and sealant with window frames and components (11 tons) as ≥ 50 ppm PCB waste (maximum PCB concentration was 270,000 ppm in caulking);
- Encapsulation of masonry building materials (brick, concrete, and brownstone) formerly in direct with the caulking through the use of liquid coatings and physical barriers;
- Encapsulation through the use of liquid encapsulants of exterior and interior building materials (brick, concrete and brownstone) located away from the former direct contact areas and which contained PCBs at concentrations above the high or low occupancy clean up levels, as applicable.

Based on the differing potential for direct contact exposures, both the high occupancy and low occupancy clean up criteria were applied as follows:

- High Occupancy Areas: The high occupancy cleanup criteria of ≤ 1 ppm total PCBs was applied to all first floor building materials adjacent to Type A windows on the north building elevation and to concrete materials surrounding the Type C basement level windows on the east elevation; and
- Low Occupancy Areas: The low occupancy cleanup criteria of ≤ 25 ppm total PCBs was applied to building materials adjacent to Type A windows on the first floor locations of the east (4 windows) and south (3

[1] Information was prepared by Woodard & Curran on behalf of Yale to satisfy the requirements under 40 CFR 761.61(c) and 761.79(h). Information was submitted on August 5, 2011 (PCB Remediation Plan), September 1, 2011 (Response to EPA Comments), and September 13, 2011 (email clarification on brownstone encapsulation). These submittals together form the "Notification."

windows) elevations and to all second and third floor building materials adjacent to Type A and Type B windows. There are no first floor windows on the west elevation.

1.3 ENCAPSULATION/BARRIER INSTALLATION AREAS AND BASELINE SAMPLING

The implementation of an in-place management strategy for residual concentrations of PCBs in masonry has removed the source material and is utilizing a physical barrier approach (encapsulation) to eliminate the direct contact exposure pathway and migration pathways of PCBs remaining in the building materials.

The following materials and areas were encapsulated with liquid coatings:

- Masonry materials in former direct contact with window caulking – Three coats of Sikagard 62 liquid epoxy coating were applied to building materials formerly in direct contact with interior and exterior joints and to a distance of 5/8-inches from the joints at 72 window openings; these areas were also subsequently covered by the metal frames of the new windows. Following application of the coating, 33 verification wipe samples were collected from CMU block, brick, or brownstone materials. Analytical results indicated that PCBs were either non-detect (< 0.20 µg/100cm^2) or < 1 µg/100cm^2 in the samples collected.
- Interior CMU walls not in direct contact with former window caulking – One coat of ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat were applied to CMU materials from the window openings to the first 90-degree angle (i.e., the interior side of the exterior wall) both laterally and vertically (i.e., above the window to the ceiling). Following application of the coatings, 19 verification wipe samples were collected. Analytical results indicated that PCBs were either non-detect or < 1 µg/100cm^2 in the samples collected.
- Exterior brick window recesses – Three or four coats of KlenzSeal liquid sealant were applied to brick surfaces within the window recess (a distance of approximately four inches) in high occupancy areas (first floor north elevation window recesses). Following application, verification wipe samples were collected. Analytical results indicated that PCBs were either non-detect or < 1 µg/100 cm^2 in all samples.
- Exterior brownstone window sills – Five coats of Duroshine Invisi-Guard impregnating sealer were applied to brownstone surfaces within the window recess (a distance of approximately 24 inches) in high occupancy areas (first floor north elevation) and three coats were applied to one window recess on the third floor south elevation (low occupancy area). Results from the verification wipe samples (one sample per window) indicated that PCBs were non-detect or < 1 µg/100cm^2 in all samples.
- Exterior Concrete sills – Five coats of Duroshine Invis-Guard impregnating sealer were applied to concrete sill materials within the window recess (a distance of approximately 11 inches) at the five basement windows. Analytical results from the verification sample indicated that PCBs were non-detect (< 0.20 µg/100cm^2).

1.4 POST ABATEMENT MONITORING

Following completion of remediation activities and improvements to the building ventilation system, indoor air samples and surface wipe samples were collected from 13 rooms to evaluate PCB concentrations in indoor air and to confirm that PCBs were not present on accessible horizontal surfaces in proximity to the windows. The sample locations were selected based on the following rationale:

- Indoor air and wipe samples were collected from approximately 20% of the rooms with windows;
- Specific locations were spatially distributed on each floor by the types of rooms (office, lab, and conference room) on the respective floor with considerations given to locations previously sampled and differing ventilation configurations (i.e., samples were divided between the two major ventilation system zones);
- On each floor at least one sample was collected from each “type” of space.

A summary of the sample locations for each floor is as follows:

- Basement Level – Although the plan included the collection of one sample from the basement level storage room, access to the space was not available at the time of sample collection (an additional sample was collected from a second floor office space);
- First Floor – Four samples were collected from first floor locations (there are a total of 13 rooms on the first floor). The samples were collected from two offices, one laboratory, and one conference room;
- Second Floor – Five samples were collected from second floor locations (there are a total of 29 rooms on the second floor). The samples were collected from three offices, one laboratory, and one conference room;
- Third Floor – Four samples were collected from third floor locations (there are a total of 25 rooms on the third floor). The samples were collected from two and two laboratories.

Analytical results from the baseline monitoring indicated the following:

- Indoor Air Sampling - PCB concentrations were below the project action level of 450 ng/m^3 (EPA's published guidance for indoor air levels for adults in schools [September 2009]) in the samples collected with reported concentrations ranging from 9.5 to 378.8 ng/m^3. Overall, PCB concentrations in indoor air decreased between 74 and 92% from pre- to post-abatement sampling.
- Surface Wipe Samples - Analytical results from the surface wipe samples indicated that PCBs were either non-detect (10 samples at < 0.20 µg/100 cm^2) or < 1 µg/100 cm^2 (3 samples with reported concentrations of 0.21, 0.24, and 0.25 µg/100 cm^2).

2. MONITORING AND MAINTENANCE IMPLEMENTATION PLAN

This MMIP has been developed to monitor the effectiveness of the remedy for the interior and exterior materials that contain PCBs at concentrations above the high or low occupancy use criteria in place beneath the encapsulating barriers.

A summary of the encapsulated surfaces are:

- Interior Masonry Surfaces and Drywall Materials – These surfaces include those currently behind the existing window frames, and concrete masonry unit block and/or drywall materials along the interior face of the perimeter building wall above the window and laterally away from the window to the first 90-degree angle.
- Exterior Masonry Surfaces (High Occupancy Areas) – These areas include:
    - Brick walls and brownstone sill materials adjacent to the seven first floor north elevation windows that are encapsulated by a liquid coating to the first 90-degree angle from the window (distance of approximately four inches for brick materials and 24 inches for brownstone materials).
    - Concrete masonry surfaces exterior to Room 7 on the basement of the east building elevation (five windows); that are encapsulated by a liquid coating to the first 90-degree angle from the window (distance of approximately 11 inches).
- Exterior Masonry Surfaces (Low Occupancy Areas) – This area includes brownstone sill materials exterior to Room 327B on the third floor of the south building elevation that are encapsulated by a liquid coating to the first 90-degree angle from the window (distance of approximately 24 inches).

The extent of these areas is depicted on the attached Figure 2-1.

2.1 INSPECTION AND SAMPLING

The following describes the inspections, sampling and reporting to be conducted for these areas:

- Visual inspections of the encapsulated surfaces will be conducted to look for signs of encapsulant deterioration and/or signs of weathering or disturbance of physical barriers (e.g., metal window frames, replacement caulking, drywall, etc.).
- Surface wipe samples of the encapsulated masonry surfaces beyond the extent of the replacement window frames/caulking will be collected to evaluate the concentration of PCBs present at the surface. Surface wipe samples will be collected as follows:
    - Interior Masonry and Drywall Surfaces – Wipe samples will be collected from interior surfaces within three rooms containing windows on the first, second, and third floors and one sample from Room 7 in the basement for a total of 10 wipe samples to be collected (or approximately 13% of the rooms based on 68 rooms with windows). The individual rooms on each floor will be randomly selected (except the basement). The exact location of the wipe within the room will be selected using a random number generator to establish the location along the wall (based on the width of the room) and height above the floor (based on the height from floor to ceiling) at which the wipe will be centered.
    - Exterior Brick Surfaces – One wipe sample will be collected from encapsulated exterior brick surfaces within the seven window recesses on the north elevation of the first floor. The specific window and side of the jamb will randomly selected for the sample. The location of the wipe along the selected jamb will then be selected using a random number generator from zero to nine with zero representing the bottom of the window.

- Exterior Brownstone Surfaces – One wipe sample will be collected from encapsulated exterior brownstone surfaces at the seven window recesses on the north elevation of the first floor. The specific window sill will randomly selected for the sample. The location of the wipe along the selected sill will then be selected using a random number generator from zero to two with zero representing the left side of the window. The wipe sample will be collected from the center of the sill, or at a distance of approximately 12 inches from the frame.
- Exterior Concrete Surfaces – One wipe sample will be collected from encapsulated concrete materials surrounding the five east elevation basement level windows. The specific window will be randomly selected. The location of the wipe will be selected using a random number generator from zero to 22 with zero representing the lower left hand corner and proceeding clockwise around the window. The wipe will then be collected from the center of the encapsulated materials, or at a distance of approximately five inches from the frames.

A summary of the wipe samples to be collected is presented on Table 2-1.

Due to the inaccessible nature of the encapsulated brownstone on the south elevation of the third floor, wipe sampling will not be conducted on those surfaces. Based on the results of the post abatement indoor air sampling event (all results indicated that PCBs were below the project action level of 450 ng/m3), no additional indoor air monitoring is proposed to be conducted.

The initial long term monitoring and sampling activities at the Kline Geology Laboratory will be conducted following the approval of this Plan.

2.2 ACTION LEVELS AND CORRECTIVE MEASURES

A combination of visual inspections and laboratory sample results will be used to verify the continued effectiveness of the applied barriers. Upon receipt of the laboratory results after each monitoring round, the data will be compared to the following action levels to determine whether additional monitoring or corrective measures are needed:

- If the barriers are intact and wipe samples are ≤ 1 µg/100 cm^2 – no additional action; long term maintenance and monitoring to continue in accordance with this plan;
- In areas where significant encapsulant deterioration or physical barrier damage is observed or PCBs are reported at concentrations ≥ 10 µg/100 cm^2, the following actions will be taken:
  - An evaluation of different encapsulants will be conducted. As noted previously, multiple coatings (up to 5 coats) in some areas were applied. Given manufacturer's specifications/dsicussions, additional coatings may not be able to be applied on these areas. If this is the case, Yale will evaluate alternative solutions in conjunction with EPA.
- If the barriers are intact and wipe samples are > 1 and < 10 µg/100 cm^2 – continued monitoring will occur to establish patterns or trends in concentration. If increasing concentrations are determined, then additional coatings may be applied and/or alternative solutions will be discussed with EPA.

These levels are considered representative and protective for this project given that the use of these areas is transitory in nature (e.g., exterior masonry surfaces). Analytical results and corrective measures will be reported to EPA in the scheduled report (see section 4).

3. TRAINING AND COMMUNICATIONS

It is not anticipated that any workers or building occupants will come into prolonged or routine contact with the encapsulated areas. The only activities that may encounter the encapsulants are planned maintenance activities. It is not anticipated that workers performing maintenance activities would require any special training or need to take extra precautions due to the presence of the coatings and new window frames; however, Yale will conduct general awareness training for facility and maintenance personnel to ensure they are aware of the importance of maintaining the encapsulant.

For any non-routine projects that involve work that could encounter the encapsulant (e.g., window replacement or repair projects [although, this is unlikely given that all windows were replaced as part of the project]), relevant and appropriate worker training requirements and procedures specific to the task will be developed and implemented.

4. REPORTING AND SCHEDULE

The activities completed as part of this plan will be documented and submitted to EPA in a long term monitoring report. This report will document the following:

- Results of the visual inspections;
- Results of the sampling and analyses;
- Comparisons to action levels and recommendations for corrective measures;
- Any corrective measures implemented;
- Any non-routine major projects conducted at the building that encountered the encapsulated area, and the training and protective measures that were implemented;
- Any proposed modifications to the monitoring and maintenance program (e.g., based on the sampling results or discussions with EPA, the frequency of the program may be modified); and
- A statement on the continued effectiveness of the encapsulants and/or secondary barriers.

It is possible that results of long term monitoring may warrant or require modifications to this plan. In the event that a modification to the MMIP is necessary, such an amendment will be proposed to EPA for approval as part of the scheduled report submittal.

It is anticipated that the initial round of inspections and sampling and reporting will be conducted in 2014. As part of the report submittal, a proposal and schedule for subsequent monitoring events will be provided.

Table 2-1
Summary of Proposed Surface Wipe Sampling Plan

Kline Goelogy Laboratory

Material	Description of Area	Surface Type	Proposed Sample Frequency	Total Number of Samples
Interior CMU and Drywall Materials	Interior side of perimeter building wall from windows to first 90-degree angle in all directions (68 locations)	CMU block and drywall coated with ECI Fibertech F-50 primer and two coats of ECI Fibertech F-51 topcoat	3 Samples per floor and 1 sample in basement	10
Exterior Brick	First Floor North Elevation Window Openings (7 locations)	Brick coated with four coats of KlenzSeal liquid sealant	1 sample per 7 windows	1
Exterior Brownstone	First Floor North Elevation Window Openings (7 locations)	Brownstone Sill and Headers coated with five coats of Duroshine Invisi-Guard impregnating sealer	1 sample per 7 windows	1
Exterior Concrete	Basement Floor East Elevation Window Openings (5 locations)	Concrete materials to a distance of 11 inches from the window frames coated with five coats of Duroshine Invisi-Guard impregnating sealer	1 sample per 5 windows	1

Notes:
Wipe samples to be collected over a 100 cm^2 area in accordance with 40 CFR 761.123 and submitted for PCB analysis by USEPA Method 8082 with USEPA Method 3540C extraction.
