DISCUSSION/RATIONALE:

The Abex Corp site was used as a secondary steel foundary from 1923 to 1952. PCBs up to 0.75 parts per million (ppm), volatile organics up to 240 ppm, lead up to 3,100 ppm, and chromium up to 1,700 ppm have all been detected in on-site soils. Little migration appears to have occurred and few targets exist.
