ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
NI: Not Ignitable

NOTES:
1. Volatile and Semi-Volatile Compounds detected in at least one sample shown above. For a complete list see the laboratory data sheets.

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	5.718	**Anderson-Darling GOF Test**
5% A-D Critical Value	0.768	Detected Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.207	**Kolmogrov-Smirnoff GOF**
5% K-S Critical Value	0.0918	Detected Data Not Gamma Distributed at 5% Significance Level

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	1.743	k star (bias corrected MLE)	1.696
Theta hat (MLE)	0.849	Theta star (bias corrected MLE)	0.872
nu hat (MLE)	341.6	nu star (bias corrected)	332.4

MLE Mean (bias corrected)	1.479	MLE Sd (bias corrected)	1.136

Gamma Kaplan-Meier (KM) Statistics

k hat (KM)	0.656	nu hat (KM)	137.7
Approximate Chi Square Value (137.66, α)	111.6	Adjusted Chi Square Value (137.66, β)	111.2
95% Gamma Approximate KM-UCL (use when n>=50)	1.728	95% Gamma Adjusted KM-UCL (use when n<50)	1.733

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	1.382
Maximum	11	Median	0.95
SD	1.751	CV	1.267
k hat (MLE)	1.062	k star (bias corrected MLE)	1.038
Theta hat (MLE)	1.301	Theta star (bias corrected MLE)	1.331
nu hat (MLE)	223	nu star (bias corrected)	218
MLE Mean (bias corrected)	1.382	MLE Sd (bias corrected)	1.356
		Adjusted Level of Significance (β)	0.0477
Approximate Chi Square Value (218.00, α)	184.8	Adjusted Chi Square Value (218.00, β)	184.4
95% Gamma Approximate UCL (use when n>=50)	1.63	95% Gamma Adjusted UCL (use when n<50)	1.633

Lognormal GOF Test on Detected Observations Only

Lilliefors Test Statistic	0.134	**Lilliefors GOF Test**
5% Lilliefors Critical Value	0.0895	Detected Data Not Lognormal at 5% Significance Level

Detected Data Not Lognormal at 5% Significance Level

Lognormal ROS Statistics Using Imputed Non-Detects

Mean in Original Scale	1.401	Mean in Log Scale	-0.0103
SD in Original Scale	1.738	SD in Log Scale	0.75
95% t UCL (assumes normality of ROS data)	1.682	95% Percentile Bootstrap UCL	1.693
95% BCA Bootstrap UCL	1.794	95% Bootstrap t UCL	1.815
95% H-UCL (Log ROS)	1.52		

DL/2 Statistics

DL/2 Normal		DL/2 Log-Transformed	
Mean in Original Scale	1.396	Mean in Log Scale	-0.0292
SD in Original Scale	1.741	SD in Log Scale	0.785
95% t UCL (Assumes normality)	1.678	95% H-Stat UCL	1.545

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution at 5% Significance Level

Suggested UCL to Use

95% KM (BCA) UCL	1.731

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Thallium

General Statistics

Total Number of Observations	95	Number of Distinct Observations	13
		Number of Missing Observations	50
Number of Detects	1	Number of Non-Detects	94
Number of Distinct Detects	1	Number of Distinct Non-Detects	12

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Thallium was not processed!

Total Petroleum Hydrocarbons (C9-C36)

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Mean in Original Scale	0.75	Mean in Log Scale	-1.839
SD in Original Scale	3.16	SD in Log Scale	1.657
95% t UCL (assumes normality of ROS data)	1.049	95% Percentile Bootstrap UCL	1.077
95% BCA Bootstrap UCL	1.257	95% Bootstrap t UCL	1.572
95% H-UCL (Log ROS)	0.813		

DL/2 Statistics

DL/2 Normal		**DL/2 Log-Transformed**	
Mean in Original Scale	0.877	Mean in Log Scale	-1.684
SD in Original Scale	3.272	SD in Log Scale	1.652
95% t UCL (Assumes normality)	1.187	95% H-Stat UCL	0.941

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution at 5% Significance Level

Suggested UCL to Use

95% KM (BCA) UCL	1.062

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% Chebyshev(Mean, Sd) UCL	569.6	99% Chebyshev(Mean, Sd) UCL	783.8

Suggested UCL to Use

95% Chebyshev (Mean, Sd) UCL	460.5

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002)
and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.
For additional insight the user may want to consult a statistician.

Thallium

General Statistics

Total Number of Observations	111	Number of Distinct Observations	14
		Number of Missing Observations	199
Number of Detects	1	Number of Non-Detects	110
Number of Distinct Detects	1	Number of Distinct Non-Detects	13

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Thallium was not processed!

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.
For additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

95% Gamma Approximate KM-UCL (use when n>=50)	1.578	95% Gamma Adjusted KM-UCL (use when n<50)	1.597

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

95% Gamma Approximate KM-UCL (use when n>=50)	31.2	95% Gamma Adjusted KM-UCL (use when n<50)	31.41

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	7.821	Mean	22.83
Maximum	57	Median	19.68
SD	11.82	CV	0.518
k hat (MLE)	4.575	k star (bias corrected MLE)	4.073

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	31.76	95% KM (Percentile Bootstrap) UCL	32.29

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

EQUATIONS:

$EPC_{[VAPOR]} = EPC_{[SOIL]} \times 1/VF \times 1000$ ug/mg

where:

$VF\ (m^3/kg) = Q/C \times (3.14 \times D_A \times T)^{1/2} \times 10^{-4} (m^2/cm^2) / (2 \times P_b \times D_A)$

and:

$DA = [(O_a^{10/3} D_i H' + O_w^{10/3} D_w)/n^2] / P_b K_d + O_w + O_a H'$

ARAMETER/DEFINITION	UNITS	DEFAULT	Source
VF / volatilization factor	m^3/kg	Calculated	
D_A / apparent diffusivity	cm^2/s	Calculated	
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m^2-s per kg/m^3	49.92	USEPA, 2014 [a]
T / exposure interval	s	8.20E+08	BCEC Visitor
Π_b / dry soil bulk density	g/cm^3	1.5	USEPA, 2014
O_a / air-filled soil porosity	L_{air}/L_{soil}	0.28	USEPA, 2014
n / total soil porosity	L_{pore}/L_{soil}	0.43	USEPA, 2014
O_w / water-filled soil porosity	L_{water}/L_{soil}	0.15	USEPA, 2014
Ψ_s / soil particle density	g/cm^3	2.65	USEPA, 1996
D_i / diffusivity in air	cm^2/s	chemical-specific	
H' / Henry's Law constant	dimensionless	chemical-specific	
D_w / diffusivity in water	cm^2/s	chemical-specific	
K_d / soil-water partition coefficient (Koc x foc) organics	cm^3/g	chemical-specific	
K_{oc} / soil organic carbon partition coefficient	cm^3/g	chemical-specific	
f_{oc} / fraction organic carbon in soil	g/g	0.006	Default

Intake and Risk Equations - Composite Receptor/Age-Adjusted

TSCA Workplan
Boston Convention and Exhibition Center
Boston, Massachusetts

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IFSadj * ABS_{ING} * FI * EF * C1}{AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF}{AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * DFSadj * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

CONSTRUCTION - Construction Worker (Adult)

TSCA Workplan
Boston Convention and Exhibition Center
Boston, Massachusetts

EQUATIONS:

$EPC_{[PARTICULATE]}$ = $EPC_{[SOIL]}$ x $PARTICULATE_{[AIR]}$ x 1E-06 [kg/mg]

where:
$PARTICULATE_{[AIR]}$ = (1/PEF * 1E+09 ug/kg) or Measured/Modelled
and:
PEF (m^3/kg) = Q/C x [(3600 s/hr) / ((0.036 x (1-*V*) x (U_m/U_t)^3 x *F(x)*)]

PARAMETER/DEFINITION	UNITS	DEFAULT	Source
$PARTICULATE_{[Air]}$ / Particulate concentration in air	ug/m^3	0.24280	Calculated or measured
Measured or modeled $PARTICULATE_{[AIR]}$	ug/m^3		Measured value
PEF / Particulate emission factor	m^3/kg		Guidance value
PEF / Particulate emission factor	m^3/kg	4.12E+09	Calculated here
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m^2-s per kg/m^3	49.92	Calculated / USEPA, 2014 [a]
V / Fraction of vegetative cover	unitless	0.1	Site-specific, estimated
U_m / mean annual windspeed	m/s	3.84	Site-specific / USEPA, 2014
U_t / equivalent threshold value of wind speed at 7 m	m/s	11.32	USEPA, 2014
F(x) / function dependant on U_m/U_t derived using Cowherd et al. (1985)	unitless	3.45E-02	Calculated / USEPA, 2014

USEPA, 2014. Regional Screening Levels.
[a] Climactic zone: Hartford, CT; Assumes no pavement and exposed soil. [a] Area of Source: 5 acres Specific to size of Site

CASRN	COPC	EPC Soil (mg/kg)	EPC Particulate (ug/m^3)
99-87-6	Cymene (p-Isopropyltoluene)	0.00188	4.6E-10

Vapor to Outdoor Air EPC Calculations
Cypher Street (0-15 ft) - Surface Soil
CONSTRUCTION - Construction Worker (Adult)

TSCA Workplan
Boston Convention and Exhibition Center
Boston, Massachusetts

EQUATIONS:

$EPC_{[VAPOR]} = EPC_{[SOIL]} \times 1/VF \times 1000$ ug/mg

where:

$VF\ (m^3/kg) = Q/C \times (3.14 \times D_A \times T)^{1/2} \times 10^{-4} (m^2/cm^2) / (2 \times P_b \times D_A)$

and:

$DA = [(O_a^{10/3} D_i H' + O_w^{10/3} D_w)/n^2] / P_b K_d + O_w + O_a H'$

ARAMETER/DEFINITION	UNITS	DEFAULT	Source
VF / volatilization factor	m^3/kg	Calculated	
D_A / apparent diffusivity	cm^2/s	Calculated	
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m^2-s per kg/m^3	49.92	USEPA, 2014 [a]
T / exposure interval	s	3.15E+07	CONSTRUCTION
Π_b / dry soil bulk density	g/cm^3	1.5	USEPA, 2014
O_a / air-filled soil porosity	L_{air}/L_{soil}	0.28	USEPA, 2014
n / total soil porosity	L_{pore}/L_{soil}	0.43	USEPA, 2014
O_w / water-filled soil porosity	L_{water}/L_{soil}	0.15	USEPA, 2014
Ψ_s / soil particle density	g/cm^3	2.65	USEPA, 1996
D_i / diffusivity in air	cm^2/s	chemical-specific	
H' / Henry's Law constant	dimensionless	chemical-specific	
D_w / diffusivity in water	cm^2/s	chemical-specific	
K_d / soil-water partition coefficient (Koc x foc) organics	cm^3/g	chemical-specific	
K_{oc} / soil organic carbon partition coefficient	cm^3/g	chemical-specific	
f_{oc} / fraction organic carbon in soil	g/g	0.006	Default

ADULT LEAD MODEL

Calculations of Blood Lead Concentrations (PbBs)

U.S. EPA Technical Review Workgroup for Lead, Adult Lead Committee
Version date 6/21/09

Subsurface Soil Near Cypher Street

Construction Worker

Variable	Description of Variable	Units	GSDi and PbBo from Analysis of NHANES 1999-2004
PbS	Soil lead concentration	ug/g or ppm	1048
$R_{fetal/maternal}$	Fetal/maternal PbB ratio	--	0.9
BKSF	Biokinetic Slope Factor	ug/dL per ug/day	0.4
GSD_i	Geometric standard deviation PbB	--	1.8
PbB_0	Baseline PbB	ug/dL	1.0
IR_S	Soil ingestion rate (including soil-derived indoor dust)	g/day	0.330
IR_{S+D}	Total ingestion rate of outdoor soil and indoor dust	g/day	--
W_S	Weighting factor; fraction of IR_{S+D} ingested as outdoor soil	--	--
K_{SD}	Mass fraction of soil in dust	--	--
$AF_{S, D}$	Absorption fraction (same for soil and dust)	--	0.12
$EF_{S, D}$	Exposure frequency (same for soil and dust)	days/yr	40
$AT_{S, D}$	Averaging time (same for soil and dust)	days/yr	365
PbB_{adult}	**PbB of adult worker, geometric mean**	**ug/dL**	**2.8**
$PbB_{fetal, 0.95}$	95th percentile PbB among fetuses of adult workers	ug/dL	6.7
PbB_t	Target PbB level of concern (e.g., 10 ug/dL)	ug/dL	**10.0**
$P(PbB_{fetal} > PbB_t)$	**Probability that fetal PbB > PbB_t, assuming lognormal distribution**	**%**	**1.0%**

PHASE 2 WEST OF C STREET
BOSTON, MASSACHUSETTS

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15A0725	B114199-BSD1		SQ	SW8260B	2-Hexanone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15A0725	B114199-BSD1		SQ	SW8260B	Acetone	R-05, V-20	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0725	15A0725-01	1/22/2015	SO	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0725	15A0725-06	1/22/2015	SQ	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0725	B114199-BLK1		SQ	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0725	B114199-BS1		SQ	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0725	B114199-BSD1		SQ	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0725	15A0725-01	1/22/2015	SO	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	15A0725-01	1/22/2015	SO	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	15A0725-01	1/22/2015	SO	SW8260B	Tetrahydrofuran	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	15A0725-06	1/22/2015	SQ	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	15A0725-06	1/22/2015	SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	15A0725-06	1/22/2015	SQ	SW8260B	Tetrahydrofuran	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	B114199-BLK1		SQ	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	B114199-BLK1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15A0725	B114199-BLK1		SQ	SW8260B	Tetrahydrofuran	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15A0847	B114295-MS1		SO	SW8270C	Pentachlorophenol	MS-09	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated
15A0847	B114295-MSD1		SO	SW8270C	2,4-Dichlorophenol	MS-09	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated
15A0847	B114295-MSD1		SO	SW8270C	Pentachlorophenol	MS-09	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated
15A0847	B114295-MS1		SO	SW8270C	2-Nitrophenol	MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
15A0847	B114295-MS1		SO	SW8270C	4-Nitrophenol	MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
15A0847	B114295-MSD1		SO	SW8270C	Fluoranthene	MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
15A0847	B114295-MS1		SO	SW8270C	2,4-Dinitrophenol	MS-23, V-04	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is outside of the method specified criteria. Reduced precision anticipated for any reported result for this compound. Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15A0847	B114295-MSD1		SO	SW8270C	2,4-Dinitrophenol	R-06, V-04	Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample. Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15A0847	B114295-MS1		SO	SW8270C	2,2'-oxybis(2-Chloropropane)	V-04, V-06	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15A0847	B114295-MS1		SO	SW8270C	Nitrobenzene	V-04, V-06	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15A0847	B114295-MS1		SO	SW8270C	Phenol	V-04, V-06	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15A0847	B114295-MSD1		SO	SW8270C	2,2'-oxybis(2-Chloropropane)	V-04, V-06	Initial calibration did not meet method specifications. Reported value for this compound is likely to be biased on the low side. Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15A0850	15A0850-01	1/26/2015	SO	SW8270C	2,2'-oxybis(2-Chloropropane)	V-04, V-20	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0850	15A0850-01	1/26/2015	SO	SW8270C	Nitrobenzene	V-04, V-20	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0850	15A0850-01	1/26/2015	SO	SW8270C	Phenol	V-04, V-20	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0851	B114354-BS1		SQ	SW8260B	Acetone	L-02, V-20	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0851	B114354-BSD1		SQ	SW8260B	Acetone	L-02, V-20	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15A0851	15A0851-01	1/26/2015	SO	SW8260B	Diisopropyl ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	15A0851-01	1/26/2015	SO	SW8260B	Methyl Tert Butyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	15A0851-01	1/26/2015	SO	SW8260B	Tert-Butyl Ethyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BLK1		SQ	SW8260B	Diisopropyl ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BLK1		SQ	SW8260B	Methyl Tert Butyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

15A0851	B114354-BLK1		SQ	SW8260B	Tert-Butyl Ethyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BS1		SQ	SW8260B	Diisopropyl ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BS1		SQ	SW8260B	Methyl Tert Butyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BS1		SQ	SW8260B	Tert-Butyl Ethyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BSD1		SQ	SW8260B	Diisopropyl ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BSD1		SQ	SW8260B	Methyl Tert Butyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BSD1		SQ	SW8260B	Tert-Butyl Ethyl Ether	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BS1		SQ	SW8260B	Naphthalene	L-07, V-05	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15A0851	B114354-BS1		SQ	SW8260B	2-Butanone (Methyl Ethyl Ketone)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BS1		SQ	SW8260B	2-Hexanone	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BSD1		SQ	SW8260B	2-Butanone (Methyl Ethyl Ketone)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BSD1		SQ	SW8260B	2-Hexanone	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15A0851	B114354-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14, R-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15A0851	15A0851-01	1/26/2015	SO	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15A0851	B114354-BLK1		SQ	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

BOSTON, MASSACHUSETTS

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15B0248	15B0248-03	2/6/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	O-03, P-04, V-24	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported. Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported. Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0248	15B0248-01	2/6/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	P-04, V-24	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported. Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0248	15B0248-01	2/6/2015	SO	SW8082	Aroclor-1260 (PCB-1260)	P-04, V-24	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported. Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0248	15B0248-02	2/6/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0248	15B0248-02	2/6/2015	SO	SW8082	Aroclor-1260 (PCB-1260)	V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0265	15B0265-01	2/7/2015	SO	SW6010B	Lead	B-07	Data is not affected by elevated level in blank since sample result is >10x level found in the blank.
15B0265	15B0265-02	2/7/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	P-04, V-24	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported. Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0265	15B0265-03	2/7/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	P-04, V-24	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported. Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0265	15B0265-02	2/7/2015	SO	SW8082	Aroclor-1260 (PCB-1260)	V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0265	15B0265-03	2/7/2015	SO	SW8082	Aroclor-1260 (PCB-1260)	V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.
15B0265	15B0265-01	2/7/2015	SO	SW8100	o-Terphenyl	S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences
15B0265	15B0265-01	2/7/2015	SO	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	1,2,4-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	Carbon tetrachloride	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0265	15B0265-01	2/7/2015	SO	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0266	15B0266-01	2/7/2015	SO	SW6010B	Lead	B-07	Data is not affected by elevated level in blank since sample result is >10x level found in the blank.

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15B0317	B115127-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0317	B115127-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0317	B115127-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0317	B115127-BS1		SQ	SW8260B	Acetone	L-14, R-05, V-20	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0317	15B0317-01	2/10/2015	SO	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0317	B115127-BLK1		SQ	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0317	B115127-BSD1		SQ	SW8260B	Acetone	R-05, V-20	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0317	15B0317-01	2/10/2015	SO	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	15B0317-01	2/10/2015	SO	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BLK1		SQ	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BLK1		SQ	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BS1		SQ	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BS1		SQ	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BSD1		SQ	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	B115127-BSD1		SQ	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0317	15B0317-01	2/10/2015	SO	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0317	B115127-BLK1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0317	B115127-BS1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0317	B115127-BSD1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0317	B115127-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0317	B115127-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0318	15B0318-01	2/10/2015	SO	SW6010B	Lead	B-07	Data is not affected by elevated level in blank since sample result is >10x level found in the blank.
15B0318	15B0318-02	2/10/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	O-03	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.
15B0318	15B0318-01	2/10/2015	SO	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0318	15B0318-01RE1	2/10/2015	SO	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Possiblity of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated
15B0363	B115220-MS1		SO	SW6010B	Lead	MS-07	Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possiblity of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated
15B0363	15B0363-02	2/11/2015	SO	SW8082	Aroclor-1242 (PCB-1242)	O-04	Sample fingerprint does not match standard exactly. Sample was quantitated against the closest matching standard.
15B0363	B115214-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0363	B115214-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0363	B115214-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14, R-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115214-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14, R-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115214-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14, V-20	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0363	15B0363-01	2/11/2015	SO	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115214-BLK1		SQ	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15B0363	B115214-BS1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0363	B115214-BSD1		SQ	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0363	B115214-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	V-20, L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0363	B115238-BS1		SQ	SW8270C	Aniline	L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
15B0363	15B0363-01	2/11/2015	SO	SW8270C	4-Chloroaniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	15B0363-01	2/11/2015	SO	SW8270C	Aniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BLK1		SQ	SW8270C	4-Chloroaniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BLK1		SQ	SW8270C	Aniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BS1		SQ	SW8270C	4-Chloroaniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BSD1		SQ	SW8270C	4-Chloroaniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BSD1		SQ	SW8270C	Aniline	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0363	B115238-BSD1		SQ	SW8270C	p-Terphenyl-d14	S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
15B0363	15B0363-01	2/11/2015	SO	SW8270C	2,4-Dinitrophenol	V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15B0363	B115238-BLK1		SQ	SW8270C	2,4-Dinitrophenol	V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15B0363	B115238-BS1		SQ	SW8270C	2,4-Dinitrophenol	V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
15B0363	B115238-BS1		SQ	SW8270C	3,3'-Dichlorobenzidine	V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15B0363	B115238-BS1		SQ	SW8270C	bis(2-Ethylhexyl)phthalate	V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15B0363	B115238-BS1		SQ	SW8270C	Butyl benzylphthalate	V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15B0363	B115238-BS1		SQ	SW8270C	Di-n-octyl phthalate	V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15B0363	B115238-BSD1		SQ	SW8270C	3,3'-Dichlorobenzidine	V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
15B0363	15B0363-01	2/11/2015	SO	SW8270C	3,3'-Dichlorobenzidine	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0363	B115238-BLK1		SQ	SW8270C	3,3'-Dichlorobenzidine	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0387	15B0387-01	1/30/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	O-03	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.
15B0388	15B0388-01	2/5/2015	W	SW6010R	Lead	MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated
15B0388	B115449-MS1		W	SW6010R	Lead	MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated
15B0405	15B0405-01	2/12/2015	SO	SW6010B	Selenium	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0405	B115405-BLK1		SQ	SW6010B	Selenium	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0405	B115405-BS1		SQ	SW6010B	Selenium	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

SUMMARY OF ANALYTICAL DATA QC NON-CONFORMANCES
BOSTON CONVENTION & EXHIBITION CENTER
PHASE 2 WEST OF C STREET
BOSTON, MASSACHUSETTS

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15B0412	15B0412-02	2/12/2015	SO	SW8082	Aroclor-1260 (PCB-1260)	O-03	Sample contains two incompletely resolved aroclors. Aroclor with the closest matching pattern is reported.
15B0412	15B0412-03	2/12/2015	SO	SW8082	Aroclor-1254 (PCB-1254)	O-04	Sample fingerprint does not match standard exactly. Sample was quantitated against the closest matching standard.
15B0412	15B0412-01	2/12/2015	SO	SW8100	o-Terphenyl	S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences
15B0412	15B0412-01	2/12/2015	SO	SW8260B	Naphthalene	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15B0412	B115251-BLK1		SQ	SW8260B	Naphthalene	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15B0412	B115251-BS1		SQ	SW8260B	Naphthalene	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15B0412	B115251-BSD1		SQ	SW8260B	Naphthalene	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15B0412	15B0412-01	2/12/2015	SO	SW8260B	2,2-Dichloropropane	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0412	B115251-BLK1		SQ	SW8260B	2,2-Dichloropropane	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0412	B115251-BS1		SQ	SW8260B	2,2-Dichloropropane	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0412	B115251-BSD1		SQ	SW8260B	2,2-Dichloropropane	L-04, V-05	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0412	B115251-BS1		SQ	SW8260B	1,1-Dichloroethene	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0412	B115251-BS1		SQ	SW8260B	1,2,3-Trichlorobenzene	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0412	B115251-BS1		SQ	SW8260B	Methylene chloride	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0412	B115251-BS1		SQ	SW8260B	trans-1,2-Dichloroethene	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0412	B115251-BS1		SQ	SW8260B	Trichlorofluoromethane (CFC-11)	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0412	B115251-BS1		SQ	SW8260B	Methyl Tert Butyl Ether	L-07, V-05	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0412	15B0412-01	2/12/2015	SO	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0412	B115251-BLK1		SQ	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15B0412	B115251-BS1		SQ	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

15B0554	15B0554-01	2/11/2015	W	SW6010R	Lead	MS-07	Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possiblity of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated
15B0554	B115715-MS1		W	SW6010R	Lead	MS-07	Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possiblity of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated
15B0585	15B0585-01	2/18/2015	SO	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0585	15B0585-01	2/18/2015	SO	SW8260B	1,2,4-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0585	15B0585-01	2/18/2015	SO	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0585	15B0585-01	2/18/2015	SO	SW8260B	Naphthalene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0585	15B0585-01	2/18/2015	SO	SW8260B	1,4-Dioxane	V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
15B0585	15B0585-01	2/18/2015	SO	SW8270C	2,4-Dinitrophenol	V-04, V-20	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0585	15B0585-01	2/18/2015	SO	SW8270C	3,3'-Dichlorobenzidine	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0585	15B0585-01	2/18/2015	SO	SW8270C	bis(2-Ethylhexyl)phthalate	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0585	15B0585-01	2/18/2015	SO	SW8270C	Butyl benzylphthalate	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0585	15B0585-01	2/18/2015	SO	SW8270C	Di-n-octyl phthalate	V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0587	B115599-BS1		SQ	SW8260B	Chlorobromomethane	L-02, V-20	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0587	B115599-BSD1		SQ	SW8260B	Chlorobromomethane	L-02, V-20	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15B0587	B115599-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0587	B115599-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0587	B115599-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0587	B115599-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0587	15B0587-01	2/18/2015	SO	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0587	15B0587-01	2/18/2015	SO	SW8260B	1,2,4-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Lab Report	Lab Sample ID	Date Sampled	Matrix	Analytical Method	Parameter	Lab Remark	
15B0742	B115875-BSD1		SQ	SW8260B	Vinyl chloride	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15B0742	B115875-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0742	B115875-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0742	B115875-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0742	B115875-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0742	15B0742-01	2/23/2015	SO	SW8260B	Dichlorodifluoromethane (CFC-12)	R-05, V-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side
15B0742	B115875-BLK1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	R-05, V-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side
15B0742	B115875-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	R-05, V-05, L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

15B0852	B116047-MS1		SO	SW8082	Aroclor-1016 (PCB-1016)	MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
15B0852	B116047-MSD1		SO	SW8082	Aroclor-1016 (PCB-1016)	MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
15B0852	15B0852-03	2/26/2015	SO	SW8082	(PCB 209) Decachlorobiphenyl	S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences
15B0852	15B0852-03	2/26/2015	SO	SW8082	Tetrachloro-m-xylene	S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences
15B0852	B116074-BS1		SQ	SW8260B	Vinyl chloride	L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD between the two LFB/LCS results is within method specified criteria.
15B0852	B116074-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0852	B116074-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0852	B116074-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0852	B116074-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15B0852	B116074-BS1		SQ	SW8260B	Acetone	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0852	B116074-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0852	B116074-BSD1		SQ	SW8260B	Acetone	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0852	B116074-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15B0852	15B0852-01	2/26/2015	SO	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

15C0030	B116231-BLK1		SQ	SW8260B	Vinyl chloride	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15C0030	B116231-BS1		SQ	SW8260B	Vinyl chloride	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15C0030	B116231-BSD1		SQ	SW8260B	Vinyl chloride	L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
15C0030	B116231-BS1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15C0030	B116231-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15C0030	B116231-BSD1		SQ	SW8260B	Acetone	L-14, R-05, L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within the limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound. Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0030	B116231-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0030	B116231-BSD1		SQ	SW8260B	2-Butanone (Methyl Ethyl Ketone)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0030	B116231-BSD1		SQ	SW8260B	2-Hexanone	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0030	B116231-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0030	B116231-BS1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14, V-20	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15C0030	B116231-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14, V-20	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
15C0030	15C0030-01	3/2/2015	SO	SW8260B	2-Butanone (Methyl Ethyl Ketone)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0030	15C0030-01	3/2/2015	SO	SW8260B	2-Hexanone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0030	15C0030-01	3/2/2015	SO	SW8260B	Acetone	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

15C0150	B116494-BSD1		SQ	SW8260B	Dichlorodifluoromethane (CFC-12)	L-14	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria.
15C0150	B116494-BSD1		SQ	SW8260B	Bromomethane (Methyl Bromide)	L-14, R-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0150	B116494-BS1		SQ	SW8260B	Acetone	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	B116494-BS1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	B116494-BSD1		SQ	SW8260B	Acetone	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	B116494-BSD1		SQ	SW8260B	Chloromethane (Methyl Chloride)	L-14, V-05	Compound classified by MA CAM as difficult with acceptable recoveries of 40-160%. Recovery does not meet 70-130% criteria but does meet difficult compound criteria. Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0150	15C0150-02	3/4/2015	SO	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0150	15C0150-06	3/4/2015	SQ	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0150	B116494-BLK1		SQ	SW8260B	Bromomethane (Methyl Bromide)	R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	1,2,3-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	1,2,4-Trichlorobenzene	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	1,2-Dibromo-3-chloropropane (DBCP)	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	2,2-Dichloropropane	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	2-Butanone (Methyl Ethyl Ketone)	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
15C0150	15C0150-01	3/4/2015	SO	SW8260B	Acetone	V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

1. Introduction

Haley & Aldrich, Inc. (Haley & Aldrich) has prepared this Ambient Air Monitoring Plan (AAMP) as an Appendix to the Toxic Substances Control Act (TSCA) Work Plan for the Phase 2 area of the Boston Convention & Exhibition Center (BCEC) located in Boston, Massachusetts (hereafter referred to as the "Site"). The limits of the Site are more specifically described in Section 1 of the TSCA Work Plan.

The objective of this AAMP is to establish the requirements, methods, and ambient air monitoring activities planned during proposed remediation activities at the Site. Haley & Aldrich has developed and will implement this site-specific AAMP.

Although it is anticipated that planned control measures will be adequate to protect public health during the proposed remediation activities, this evaluation is intended to assess hypothetical exposures to potentially sensitive receptors in the vicinity of the Site under the assumption that such control measures are not in place. Specifically, this AAMP identifies the circumstances under which remedial activities taking place on-site should be modified or engineering controls (e.g., dust suppression) should be implemented.

Health and safety monitoring for on-site personnel is not addressed in this AAMP. Health and safety monitoring for on-site personnel is provided in the site-specific Health and Safety Plans (HASPs) developed by the Contractor and Haley & Aldrich for their respective personnel.

The AAMP was developed to support the activities described in the TSCA Work Plan. The AAMP uses references to information, data, and figures that are contained in the aforementioned TSCA Work Plan.

The risk approach taken in this AAMP to derive air monitoring action levels follows both MassDEP and USEPA risk assessment guidance and is inclusive of the requirements under both programs. Compounds of Concern (COC) selection was conducted using MassDEP methodology and did not use risk-based screening levels (e.g., RSLs). However, this imparts a conservative bias on the establishment of action levels since it retains more constituents as COC than would otherwise be retained.

1.1 PURPOSE OF AAMP

Remediation is planned for the Site and will consist of the localized excavation and off-site disposal of soil containing the highest concentrations of PCBs (between 500 and 11,000 mg/kg) to achieve TSCA closure with the placement of a cap on certain portions of the Site and implementation of a deed restriction. In addition, hot spots consisting of elevated lead concentrations will be excavated to achieve a Permanent Solution with Conditions for RTN 3-16211. It is estimated that approximately 8,800 cy of soil could be excavated off-site as part of remediation. Potential emissions of airborne particulate matter (dust) may occur when impacted soils are excavated or otherwise disturbed. Site excavation and loading of impacted soils onto trucks for off-site disposal may have the potential to impact ambient air at the Site.

This document establishes a work plan for evaluating fugitive emissions at the Site in real time and identifying circumstances when remedial activities taking place on-site should be modified or engineering controls (e.g., dust suppression) should be implemented. As described in the TSCA Work plan and as documented in this AAMP, the constituents of concern in soil that will be excavated are

PCBs and, to a lesser extent, metals. VOCs in soil to be excavated (and throughout the Site) were detected at low frequency and concentration, and are not considered to be a potential concern for volatilization to the air at and downwind of the Site. Therefore, it is not necessary for this AAMP to address volatile emissions.

Perimeter air monitoring will be conducted by Haley & Aldrich during the above mentioned construction activities to monitor potential dust concentrations. Mitigation measures to control potential dust concentrations and respective action levels are described herein. The Contractor will be responsible for monitoring worker exposures within the work zone and implementing measures to reduce dust if the perimeter action levels are exceeded or to meet contractor-defined action levels for workers within the work zone.

2. Action Levels and Field Response Actions

2.1 SCHEDULE FOR AIR MONITORING

Air monitoring will occur at the Site during excavation and truck loading of impacted soil. Based on the preliminary construction schedule for Site work, the anticipated duration of air monitoring for remedial activities is approximately 6 months.

Programmatic ambient air quality monitoring, as outlined by this AAMP, is not anticipated to be necessary during Site activities conducted after soil excavations and soil management activities are completed. Perimeter air monitoring is not planned during non-working hours (nights and weekends) because soils will not be disturbed during those times.

2.1.1 Daily Monitoring

Monitoring of dust at the perimeter of the Site will be conducted using real-time field screening instruments. Specific sampling and locations will be evaluated and updated as needed based on remedial activities and weather conditions.

2.2 SUMMARY

An action level for fugitive dust that may be generated during the remedial activities was identified as the lower of the following:

1) The USEPA National Ambient Air Quality Standard (NAAQS) value for particulate matter of less than 10 microns in diameter (PM_{10}) of 150 µg/m^3. The NAAQS PM_{10} represents the maximum permissible concentration of dust that is allowed in the air, regardless of any specific compounds that are within the dust (for example, if clean beach sand was being excavated the NAAQs PM_{10} of 150 µg/m^3 would apply to the sand).
2) The concentration of PM_{10} that would be associated with a Condition of No Significant Risk of harm to human health, as defined by the MassDEP. The risk-based PM_{10} concentration represents the maximum permissible concentration of dust that could contain compounds of concern (COCs) in the soil and be associated with cancer and non-cancer risk that do not exceed MassDEP's cumulative risk limits specified at 310 CMR 40.0900.

To determine the risk-based PM_{10} action level, a two-step procedure was used. In Step 1, cumulative risks were calculated for a hypothetical exposure to dust, and in Step 2, a PM_{10} concentration associated with No Significant Risk was derived.

2.2.1 Cumulative Risk Calculation

Soil data representative of soil that will be disturbed during remediation activities at the Site are provided in Table 1, and are shown in Figure 13 of the TSCA Work plan.

2.2.1.1 Selection of Compounds of Concern

The applicable soil data were reviewed in order to identify COC for this evaluation. Compounds of concern are defined as those compounds that are potentially related to the Site and for which data are of sufficient quality for use in a quantitative Risk Characterization. MassDEP Risk Characterization

guidance indicates that all constituents detected in Site media should be retained as COC unless they are:

- present at concentrations that are consistent with background concentrations;
- detected at low concentration and low frequency; or
- laboratory contaminants.

The maximum detected levels of metals and polycyclic aromatic hydrocarbons (PAHs) in soil were compared to available Massachusetts Department of Environmental Protection (MassDEP) background values for natural soil from the MassDEP's Technical Update "Background Levels of Polycyclic Aromatic Hydrocarbons and Metals in Soil," dated 23 May 2002, to determine if any of the metals of PAHs could be eliminated from further evaluation. No PAHs and metals were eliminated as compounds of concern based on this comparison.

In addition, per MassDEP 1995 Risk Guidance, several VOCs were not considered COC because they were detected with low frequency and at low concentrations. The criteria for determining that a constituent is present at low frequency and concentration are as follows:

- Low frequency: detected in 1 or 2 samples out of dataset of 10-20 or detected in less than 5% in a dataset greater than 20
- Low concentration: approximately an order of magnitude below the Reportable Concentration.
- Compounds eliminated due to low frequency and at low concentrations are: 1,2,4-trimethylbenzene, 1,3,5-trichlorobenzene, benzene, chloroform, cymene, ethylbenzene, Isopropylbenzene, methylene chloride, m, p- and o- Xylenes, tetrachloroethene, 1,2-dichlorobenzene, 2-chloronapthalene, 2-methylphenol, 3&4-methylphenol, acetophenone, aniline, butyl benzylphthalate, diethyl phthalate, di-n-butylphthalate, and n-nitrosodiphenylamine.

MassDEP considers EPH to provide a better characterization of hydrocarbon chemistry. Therefore, TPH data was converted into EPH carbon ranges based on Site EPH data. The TPH value was converted into the EPH carbon ranges using the following compositions: 42% assigned to C11-C22 aromatics, 45% assigned to C19-C36 aliphatics, and 13% assigned to C9-C18 aliphatics. Because EPH data were available and TPH values were converted to TPH, TPH was not evaluated further.

A summary of the soil data that is representative of soil that is planned to be disturbed during construction is provided in Table 2. Accordingly, COC for dust monitoring include VOC, SVOCs, metals, EPH, VPH, and polychlorinated biphenyls. It is assumed that these COC may potentially be entrained in fugitive dust (particulate) in air during remedial activities.

It is noted that the process described above does not use risk-based screening levels (e.g., RSLs) and therefore retains more constituents as COC that would otherwise be retained. This imparts a conservative bias on the establishment of action levels.

2.2.1.2 Exposure Point Concentrations

Calculating EPCs for soil-derived dust requires identification of the COC concentration in the soil that is the source of the dust (i.e., the concentration of the COC that will be within the air-borne dust), and modeling of the migration of soil to air-borne dust (i.e., the particulate concentration of dust in the air that will result from the remedial activities).

Soil EPCs

Evaluation of the soil data set indicated elevated levels of several compounds (specifically 1,2,3-trichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, 1,2,4-trichlorobenzene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, naphthalene, total PCBs, antimony, barium, lead, mercury, zinc, C9-C10 aromatics, and EPH) are present in some remediation areas at the Site. Due to the variability in the levels and spatial distribution of these compounds, the 95th UCL was used as the EPC for those compounds. The 95th UCL was calculated using ProUCL software (V.5.1). ProUCL output documentation is presented as Attachment B. The EPCs for the remaining COC were identified as the arithmetic average levels of COC. Overall, the arithmetic average levels of the remaining constituents detected in the soil samples within the limits of remediation activities are considered to be representative of the soil concentrations that could be sources of fugitive dust emissions and thus were considered appropriate for use as EPCs. Arithmetic average concentrations were calculated assuming that non-detect values were present at one-half the sample quantification level. Soil EPCs are summarized in Table 2.

Air (Dust) EPCs

To derive air concentrations of COC in dust, the soil EPCs described above were assumed to be representative of the COC concentrations in particulate (dust) that may be generated by remedial activities. It was assumed that the dust concentration that would exist in the air during the remedial activities would be 60 $\mu g/m^3$, which is the MassDEP default PM10 concentration that is used to evaluate particulate dust inhalation exposures to construction workers engaged in soil excavation activities. The soil EPCs were multiplied by the PM10 concentration of 60 ug/m^3 to derive COC concentrations in dust.

2.2.1.3 Cumulative Risk

Cumulative risks for inhalation exposures to fugitive dust were calculated based on the conservative assumption that nearby, off-site adult and child residents would be exposed to the dust for the duration of the remedial activities, and would inhale fugitive dust containing COC that was hypothetically released from soil during the remedial activities. Since the areas being remediated will be closed to those not associated with the remediation work, nearby receptors will not be present within those areas during remediation. However, deriving the risk-based PM_{10} value to be protective for residential populations ensures that a condition of No Significant Risk will be maintained for nearby commercial properties, pedestrians, and passers-by. Cumulative risks were calculated by A) deriving concentrations in dust to which receptors could hypothetically be exposed (i.e., deriving the exposure point concentration (EPC) for each COC in dust) (described above); B) estimating the amount of exposure to the dust that could occur for each receptor; and C) combining the estimate of exposure with toxicity values to derive estimates of health risk for carcinogenic and non-carcinogenic effects.

Exposure factors for residents were selected based on MassDEP guidance and site-specific information. Based on the remediation plan, it was assumed that remedial activities that could result in exposure to impacted soils at the Site would occur five days per week over a 6 month period for a total of approximately 129 work days out of a 180 day duration (including weekends). In addition, exposure to fugitive dust was assumed to occur for 12 hours per day (e.g., to allow for potential after hours exposure to fugitive dust emissions). The exposure factors used in the risk calculations are included in Attachment A.

The exposure pathways used to quantify intake to COC in dust were inhalation exposure (inhaling dust into the lung with subsequent absorption of COC through lung tissue) and ingestion of respirable

particulates (swallowing particulates that may be expelled from the lung with subsequent absorption of COC through the gastrointestinal tract).

Estimation of a receptor's exposure to Site contaminants involves assessment of the amount of material in contact with the receptor and the amount of material available for absorption into the body. This assessment is achieved through the calculation of an average daily dose (ADD) for each COC and each route of exposure.

To calculate risks, the ADD values were compared with appropriate noncancer toxicity values (Reference Dose or RfD, Reference Concentration of RfC) to derive numerical estimates of the noncarcinogenic risk, referred to as a Hazard Index (HI). RfDs and RfCs used to calculate risks were selected as values applicable to subchronic exposure periods (exposures lasting less than 7 years in duration) because the remedial activities are anticipated to occur over a 6-month period. The ADD values were multiplied by the appropriate cancer toxicity values (Cancer Slope Factor or CSF, Unit Risk or UR) to derive numerical estimates of excess lifetime cancer risk (ELCR). Toxicity values used in these risk calculations are shown in Attachment A and are generally consistent with values published by MassDEP and USEPA and used by MassDEP to develop the MCP Numerical Standards.

The cumulative risks were calculated by summing the HI and ELCR values for all COCs, to derive cumulative cancer and cumulative non-cancer risks. Calculations of cumulative receptor risk for adult residents are included as Attachment A. A summary of the Total Site Risk Estimates is presented in Table 3.

As shown in Table 3, the cumulative receptor HI value for an adult resident is 0.2 and the cumulative receptor cancer risk for an adult resident is 6×10^{-8}. The cumulative receptor HI value for a child resident is 0.2 and the cumulative receptor cancer risk for a child resident is 4×10^{-8} (cancer risks are not summed among child and adult residents because the total exposure period is only 6 months). The MCP states that the cumulative receptor cancer risk limit is an excess lifetime cancer risk of 1 in 100,000 (1×10^{-5}) and the cumulative receptor non-cancer risk limit is a hazard index (HI) of 1. The calculated risk levels indicate that a hypothetical 6 month, 12-hour per day, exposure to a PM_{10} dust concentration of 60 $\mu g/m^3$ that contains COC in soil at the Site would result in risk levels for non-cancer or cancer risk below the MCP cumulative receptor risk limits. These risks are also consistent with the USEPA risk thresholds of an HI of 1 and a cancer risk of between 1E-06 and 1E-04.

2.2.2 Identification of Dust Action Level

Based on the calculated risk levels, a site-specific risk-based action level for fugitive dust (as a PM_{10} concentration) was identified for the Site as 60 ug/m^3. This dust concentration is associated with risks that do not exceed MCP and USEPA risk limits.

As discussed previously, the application of the NAAQS for PM_{10} of 150 $\mu g/m^3$ for a 24-hour period of exposure is a requirement during monitoring. Because the risk-based action level for PM_{10} is less than the NAAQS for PM_{10}, the risk-based value of 60 $\mu g/m^3$ is used as the dust action level during remedial activities. This value is protective of public health and ensures compliance with the particulate air standard.

The Dust Action Level of 60 $\mu g/m^3$ will be used by on-site personnel during monitoring of ambient air as the maximum allowable concentration that is protective of receptors at and in the vicinity of the Site.

This value effectively serves as the Action Level for implementing a reassessment of remedial activities or for implementation of fugitive emissions controls.

3. Air Monitoring Systems and Procedures

Environmental perimeter air monitoring will be conducted during excavation activities of impacted soils to screen for dust concentrations in ambient air. This AAMP provides response and action levels which have been derived to guide mitigation measures and preclude potential unacceptable exposures to the general public.

3.1 MONITORING EQUIPMENT

Potential dust concentrations in ambient/outdoor air during the activities described herein will be screened using a TSI Inc. Model 8530 DustTrak II Aerosol Monitor instrument (or analogous). The monitor will be used to determine the concentrations total inhalable and respirable particulates (PM10) in ambient air. The detection limit for aerosol concentration for the DustTrak II instrument is 1 $\mu g/m^3$, which is more than an order of magnitude below the site-specific action level of 60 $\mu g/m^3$.

3.2 PERIMETER AIR MONITORING LOCATIONS

Ambient air samples will be collected from the perimeter of the Site. Locations will be evaluated and updated as needed based on the nature and intensity of remedial construction activities, and/or weather conditions. Monitoring locations will be documented daily in the field activity logbook.

3.3 SAMPLING PROCEDURES

Real time monitoring will be used to evaluate daily conditions at the Site and to identify and respond to unacceptable short-term impacts to ambient air quality due to remedial activities, if any.

In order to obtain real-time data, air samples will be collected using the following approach:

- Dust monitoring will be conducted, at a minimum, when intrusive soil activities (e.g., excavation, backfilling) are being conducted, or when generation of fugitive dust from impacted soils could potentially occur.

- Sustained average concentrations of PM_{10} in ambient air greater than 60 $\mu g/m^3$ for periods of 30 minutes will require implementation of engineering controls or modification of work activity to reduce dust levels until the sustained average concentration of PM_{10} in ambient air is less than the action level (60 $\mu g/m^3$) for a period of air monitoring no less than 20 minutes.

- Documentation for each day of remedial activities will include meteorological observations, observations of dust and work zone monitoring conditions. Additional field screening locations may be established if needed to evaluate potential fugitive emissions associated with specific circumstances of meteorological conditions and remedial action activities.

4. Mitigation measures

In order to limit or decrease potential dust concentrations in ambient air, the following mitigation measures may be taken:

- Water-down the exposed ground surface;
- Spread hygroscopic salts;
- Use of biodegradable tackifiers;
- Minimize the areas of excavation which are exposed at a given time;
- Backfill and stabilize excavated areas as soon as possible;
- Set up temporary erosion control mats/netting/geotextiles; or
- Suspension of work during windy conditions.

5. Equipment Calibration and QA/QC Procedures

Calibration of instrumentation will occur daily and in accordance with the equipment manufacturer's calibration and quality assurance requirements. Calibrations will be recorded in the field activity logbook.

6. Data Summaries

6.1 FIELD DOCUMENTATION

Daily data summaries will be prepared to document the field screening results for the day. The summaries will include the locations monitored, daily TWA results for PM_{10}, the date and time of the reading, location-specific observations on odors, weather conditions, or site activities related to air quality, and the daily maximum value for each day. Monitoring results logged on instruments will be downloaded daily to the field technician's laptop computer.

The results of the monitoring program will be summarized and included in Weekly Field Reports which are distributed to the project team.

7. Summary

In summary, this document establishes a work plan for evaluating fugitive emissions at the Site in real time and identifying circumstances when remedial activities taking place on-site should be modified or engineering controls (e.g., dust suppression) should be implemented.

Perimeter air monitoring will be conducted by Haley & Aldrich during remediation activities to monitor potential dust concentrations.

In order to obtain real-time data, air samples will be collected using the following approach:

- Dust monitoring will be conducted, at a minimum, when intrusive soil activities (e.g., excavation, backfilling) are being conducted, or when generation of fugitive dust from impacted soils could potentially occur.

- Sustained average concentrations of PM_{10} in ambient air greater than 60 $\mu g/m^3$ for periods of 30 minutes will require implementation of engineering controls or modification of work activity to reduce dust levels until the sustained average concentration of PM_{10} in ambient air is less than the action level (60 $\mu g/m^3$) for a period of air monitoring no less than 20 minutes.

Documentation for each day of remedial activities will include meteorological observations, observations of dust and work zone monitoring conditions. Additional field screening locations may be established if needed to evaluate potential fugitive emissions associated with specific circumstances of meteorological conditions and remedial action activities.

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is
the laboratory reporting limi
NI: Not Ignitable

ABBREVIATIONS:
-: Not Analyzed
mg/kg: milligram per kilogram
mg/L: milligram per liter
mV: millivolts
ND (2.5): Not detected, number in parentheses is
the laboratory reporting limi
NI: Not Ignitable

C9-C18 ALIPHATICS	79	/	164	8.1	-	2886	205	NA	no	no	1000			C9-C18 ALIPHATICS	102	95% UCL

ABBREVIATIONS:
- EPC = exposure point concentration
- mg/kg = milligram per kilogram
- UCL = upper concentration limit

NOTES:
- Only compounds detected above laboratory detection limits at least once are listed.
- Compounds were excluded as COC if the maximum detected levels in site-wide data did not exceed 2002 MassDEP natural background concentrations.
- Compounds were excluded as COC if they were detected at low frequency and low concentrations (i.e., if they were detected in 1 or 2 samples out of dataset of 10-20 or less than 5% in a dataset greater than 20), and at concentrations approximately an order of magnitude lower than the Reportable Concentration.
-TPH was not included as a COC since EPH and VPH carbon ranges were reported. EPH data provides a better characterization of petroleum contamination than TPH data. EPH values were converted from TPH results based on available EPH data. 42% of the TPH value was assigned to C11-C22 aromatics, 45% was assigned to C19-36 aliphatics, and 13% was assigned to C9-C18 aliphatics. If TPH was not detected, the laboratory reporting limit was assigned to each carbon range. Summary statistics for detected plus converted values are shown.
- The average for Total PCBs uses 1/2 the detection limit for those samples for which no Aroclors were detected.
- Average levels are calculated as the arithmetic mean and use values of 1/2 the reporting limit for constituents that were not detected.
-95% UCL is calculated using ProUCL software (V. 5.1). ProUCL output documentation is presented in Attachment B.
- For compounds analyzed by more than one method, such as napthalene, the maximum calculated average or 95% UCL was used for the EPC.

Nearby Adult Resident - Soil: Table CW-6
Cyanide Calculations
Based on Construction Worker Table CW-6

The soil cyanide concentration limit set to protect a construction worker against an acute, potentially lethal one-time dose of cyanide from incidental ingestion of contaminated soil is 12,000 mg/kg_{soil}. This is the concentration of available cyanide in soil below which acute human health effects would not be expected following a one-time exposure. This soil concentration is calculated using the equation below with a one-time soil ingestion estimate of 50 mg_{soil} and an available cyanide dose limit of 0.01 $mg/kg_{body\ weight}$.

MassDEP's guidance on evaluating the risk from a one-time cyanide dose considers cyanide's potentially lethal effects as well as information on cyanide metabolism:

> Cyanides are detoxified rapidly by the body, and a large acute dose which overwhelms the detoxification mechanism is potentially more toxic than the same dose distributed over a period of hours. (MassDEP *Background Documentation for the Development of an Available Cyanide Benchmark Concentration,* originally dated October 1992, Modified August 1998)

Assessment of a potential one-time dose requires an estimate of the maximum soil concentration the trespasser could contact at any one time. The average soil concentration within a typical exposure area will underestimate the potential one-time dose. Therefore, to assess the acute risk of a one-time potentially lethal dose, the EPC for cyanide should be a conservative estimate of the maximum concentration.

The construction worker soil concentration limit to protect against adverse effects from an acute (one-time) exposure to cyanide is 12,000 mg/kg.

Acute Concentration Calculation for Cyanide

$$\text{Concentration} = \frac{\text{HQ x Acute Dose Limit x BW}}{\text{IR x RAF x Conversion Factor}}$$

Parameter	Value	Units
HQ (Hazard Quotient)	1	(unitless)
Acute Dose Limit	0.01	mg avail. CN/ kg BW
BW (Body Weight) $_{11\text{-}12}$	58	kg
IR $_{(1\text{-time reasonable max})}$	50	mg
Conversion Factor	1.0E-06	kg soil / mg soil
RAF	1	(unitless)

The toxicological basis for estimating an allowable one-time dose is documented in MassDEP's 1992 *Background Documentation for the Development of an "Available Cyanide" Benchmark Concentration,* which is published at: http://www.mass.gov/eea/docs/dep/toxics/stypes/dscyanide.pdf

Nearby Child Resident - Soil: Table CW-6
Cyanide Calculations
Based on Construction Worker Table CW-6

The soil cyanide concentration limit set to protect a construction worker against an acute, potentially lethal one-time dose of cyanide from incidental ingestion of contaminated soil is 12,000 mg/kg_{soil}. This is the concentration of available cyanide in soil below which acute human health effects would not be expected following a one-time exposure. This soil concentration is calculated using the equation below with a one-time soil ingestion estimate of 50 mg_{soil} and an available cyanide dose limit of 0.01 $mg/kg_{body\ weight}$.

MassDEP's guidance on evaluating the risk from a one-time cyanide dose considers cyanide's potentially lethal effects as well as information on cyanide metabolism:

> Cyanides are detoxified rapidly by the body, and a large acute dose which overwhelms the detoxification mechanism is potentially more toxic than the same dose distributed over a period of hours. (MassDEP *Background Documentation for the Development of an Available Cyanide Benchmark Concentration,* originally dated October 1992, Modified August 1998)

Assessment of a potential one-time dose requires an estimate of the maximum soil concentration the trespasser could contact at any one time. The average soil concentration within a typical exposure area will underestimate the potential one-time dose. Therefore, to assess the acute risk of a one-time potentially lethal dose, the EPC for cyanide should be a conservative estimate of the maximum concentration.

The construction worker soil concentration limit to protect against adverse effects from an acute (one-time) exposure to cyanide is 12,000 mg/kg.

Acute Concentration Calculation for Cyanide

$$\text{Concentration} = \frac{\text{HQ x Acute Dose Limit x BW}}{\text{IR x RAF x Conversion Factor}}$$

Parameter	Value	Units
HQ (Hazard Quotient)	1	(unitless)
Acute Dose Limit	0.01	mg avail. CN/ kg BW
BW (Body Weight) 11-12	58	kg
IR (1-time reasonable max)	50	mg
Conversion Factor	1.0E-06	kg soil / mg soil
RAF	1	(unitless)

The toxicological basis for estimating an allowable one-time dose is documented in MassDEP's 1992 *Background Documentation for the Development of an "Available Cyanide" Benchmark Concentration,* which is published at: http://www.mass.gov/eea/docs/dep/toxics/stypes/dscyanide.pdf

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Mean (detects)	2.316		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution at 5% Significance Level

Suggested UCL to Use

95% KM (Chebyshev) UCL	619.9

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	0.862	k star (bias corrected MLE)	0.85
Theta hat (MLE)	448.6	Theta star (bias corrected MLE)	455
nu hat (MLE)	270.7	nu star (bias corrected)	266.8
Mean (detects)	386.7		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	370.2
Maximum	9956	Median	150
SD	866.8	CV	2.342
