On July 21, the Fresno County Agricultural Commissioner's (CAC) office received a complaint of pesticide drift to a residence located in Sanger, CA. A family of 2 adults and 5 children returned to their home around 10:00 pm. The father noticed a chemical odor and fog inside their residence. He turned on the window air conditioner and sprayed air freshener. The applicator also allegedly drifted onto the family's van. The family experienced symptoms that included coughing, nausea, vomiting, headaches and nasal irritation. The family's 2 month old child was still experiencing symptoms in the morning and was taken to emergency. The physician prescribed eye drops for eye irritation. The investigation revealed that a ground application of FujiMite and Vintre was made to an adjacent vineyard. Samples tested positive for fenpyroximate residues. Additional sample results are pending. Fresno CAC is continuing to investigate the incident.
