Subject: Performance Test Results
Desert View Power
Title V Permit No. CB-ROP-05-01
SCAQMD File # 100154

Dear Mr. Connolly:

The purpose of this letter is to submit the results from the performance testing conducted at Desert View Power (DVP) on March 4-12, 2021. The following performance tests and relative accuracy tests audits (RATA) were completed for Unit 1 and Unit 2.

Performance Tests:

- Particulate Matter (PM)
- Hydrochloric Acid (HCl)
- Hydrocarbons (non-methane hydrocarbon)
- Mercury (Hg)

RATA tests:

- Sulfur Dioxide (SO_2)
- Nitrogen Oxides (NO_x)
- Carbon Monoxide (CO)

The PM and Hg tests were conducted to demonstrate compliance with the Boiler MACT limits and these test results and the RATA reports were uploaded to USEPA's Electronic Reporting (ERT) via CEDRI, as required by 40 CFR 63.755(h). The HCl testing was conducted by a method not supported by ERT and the test report is attached for your use. The test results for PM, HCl, SO_2, NOx, CO, and hydrocarbons are in compliance with the Title V permit limits. However, the mercury (Hg) test results for Unit 1 and Unit 2 exceeded the permit limit and additional details are provided below.

Both power boilers at DVP, Unit 1 and Unit 2, are permitted to burn biomass. A review of the operating data during the stack test event shows that the boilers and emission controls were operating normally. The types of biomass burned at this facility vary and can include agricultural waste, construction and demolition debris, and other biomass materials. The

biomass fuel is supplied by a number of different vendors. Due to the variability in the potential fuel supply, DVP routinely samples the incoming fuel for Hg content. Sample results dating back to 2018 indicate that the Hg content in the fuel is below the levels that would cause an exceedance of the Boiler MACT limit. Fuel samples were collected during this stack test event and we recently received the laboratory results which indicate the Hg level in the fuel that day was far higher than what we have seen in the past. DVP is now in the process of contacting our fuel suppliers to determine the source of this high Hg-containing fuel. Once we have identified and removed this source of fuel from our supply, we will schedule a retest for Hg and submit updated test results. DVP will also complete a Root Cause Analysis to identify steps to prevent a reoccurrence of this issue.

Based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

Regards,

Jim Robertson
