. . . just off the phone on an unrelated topic, but we'll have to check. I was under the impression the Fl rule was already in place.

I will have to check, I am not sure.

Like the proposed label, it speaks to 1000 ft. for some soil types/situations, but also has 300 ft. on the label?

Is the rule in effect or is it a proposal? It talks about a 1000 ft well setback.

Marion – Debra - -just passing this along concerning aldicarb. Amy is the SLA person from Florida and I know her from section 18 work and such.

Earlier today, Amy reached out to express that Florida is closely tracking the PRIA for aldicarb-citrus and is interested in assisting – if we have need for that or technical questions. She was signaling this from the standpoint of supporting our science – and made clear to me she/her office recognizes there are some important risk issues to consider. Attached too – is a state rule they have on aldicarb and I felt it might be interesting to look at in the context of the proposed label or mitigation options.

Thanks
