I'll send the Idaho biops one at a time to avoid overloading email, for reference to the mercury ALC per our earlier comment. Here's the one from FWS.

Here's the first item I found for HHC calculations, see the attached pdf (the spreadsheet is superseded by the one I sent recently). The formulas are included there. I'd need to get clearance from HQ if you would like to include it in your public notice, and there may be a newer version now. I'll look for the Washington spreadsheet next. It doesn't include all of the criteria, just the ones we had promulgated, but it is a functioning spreadsheet.

Thanks Candon! I've attached the "Tools for Tribes" HHC calculator inputs, got the ok to send that, sorry for the delay. I would like to get an HQ review of your draft WQS – I'll give you a call shortly to talk about this path forward, to make sure we're on the same page.
Maja

Hello Maja,
I have attached the Shoshone-Bannock Tribes draft WQS for your preview, as we talked about on the phone yesterday. Please ignore the orange highlights as they are there for our commission. The yellow highlights are the chemicals we have been discussing and are using an RSC of 0.2. I realized as I was sending the draft that I omitted the Enterococci options in the Recreational Criteria and I will

be inserting that into the document.
Thanks,
