Salina-looks like if the plant has a boiler they might need an air permit. Air Divison provided me guidance earlier this year.

If we need to talk again before you reach out to Mr. Kissee let me know.

Thanks for your help.

Randy

Sure thing. I found an AP-42 doc on it also (attached) and other information as well. Water and waste will most likely need to be included but those are out of my wheelhouse☺. Do you know what kind of meat, i.e., beef, pork, poultry? I think it makes a difference and can help narrow down the specific emission points.

Yes, if they have a boiler or perhaps other equipment, too. Thanks for responding Elizabeth.

If they have a boiler, they will need one. I will look into what other equipment is typically used in these operations.

Good morning Cindy and Elizabeth,

Do meat processing plants usually require a Clean Air permit from your experience? Choctaw Nation inquired last month and following up.

When I spoke to Bonnie last month I believe she said if the plant had a boiler they most likely would need one.

Thanks,

Randy

Randy,

The Tribe is looking at a potential meat processing plant on tribal trust land. Can EPA advise concerning regulations and/or permits that might apply to such a facility such as air, water, wastewater, solid waste, etc? If EPA is available for a conference call, we are available next Wednesday or Thursday. Thanks for any assistance in advance!!

Yakoke,
