Mr. Don Heller
U.S. Environmental Protection Agency, Region 5
Waste Management Division
77 West Jackson Blvd., HRP-8J
Chicago, IL 60604-3590

RE: Second Quarter 2009 Progress Report
RCRA Corrective Action
Allison Transmission, Speedway, IN
USEPA ID Nos. IND006413348 and IND000806828

Dear Mr. Heller:

In accordance with the requirements of the Performance-Based Corrective Action Agreement between the U.S. Environmental Protection Agency Region 5 (USEPA) and General Motors Corporation (GM), please find the attached progress report for the second quarter of 2009 (April 1, 2009 through June 30, 2009).

It is noted that as a result of GM's bankruptcy, the current operating assets of GM were sold on July 10, 2009, to a newly formed company, which will be known as General Motors Company. Existing, non-continuing assets will remain the property of "old" GM, which will be known as Motors Liquidation Company (MLC), in its capacity as a debtor-in-possession in the bankruptcy case. The project team is currently waiting for the bankruptcy process to determine which entity will have responsibility for this project.

Please contact me if you would like to discuss this matter further. Thank you.

Sincerely,

Heather Justinus-Lyons for

David M. Favero, P.G.
Project Manager

ATTACHMENT A
SECOND QUARTER 2009 PROGRESS REPORT
PERFORMANCE-BASED RCRA CORRECTIVE ACTION
ALLISON TRANSMISSION
APRIL 1, 2009 TO JUNE 30, 2009

WORK PERFORMED THIS QUARTER

- Completed and submitted *Stage III Additional Sampling Matrix* to USEPA on June 19, 2009.

- Began operation of the LNAPL recovery system interim measure for the Waste Treatment Area (AOI 19).

- Completed and submitted the report on the installation and upgrade of the Plant 12 Former Degreaser Area SVE/Groundwater Recovery System interim measure to USEPA on April 15, 2009.

- Continued updating an evaluation of water use at and in the vicinity of the Facility.

- Met with a representative of the Marion County Health Department to discuss expanding the existing no-well zone #2 to cover the remainder of the Facility and some adjacent properties.

- Continued operation and maintenance of interim measures; the SVE/groundwater recovery system at the Plant 12 Former Degreaser Area (AOI 51), passive free product recovery and groundwater recovery related to the diesel fuel impacted groundwater plume (AOI 40), and passive free product recovery at the Transmission Test Assembly Area (AOI 53).

DATA AVAILABLE DURING THIS QUARTER

- Analytical results from monitoring air emissions from the Plant 12 former degreaser area SVE and air stripper exhaust stacks (included in the enclosed *RCRA Corrective Action Interim Measures Semi-Annual Status and Groundwater Monitoring Report*, First Half 2009).

- Analytical results from monitoring the effluent from the pretreatment of recovered groundwater from the diesel fuel plume (Outfall 003), and effluent from the treatment of recovered groundwater from the Plant 12 Former Degreaser Area (Outfall 004), (included in the enclosed *RCRA Corrective Action Interim Measures Semi-Annual Status and Groundwater Monitoring Report*, First Half 2009).

- Analytical results from groundwater monitoring, (included in the enclosed *RCRA Corrective Action Interim Measures Semi-Annual Status and Groundwater Monitoring Report*, First Half 2009).

SUMMARY OF CONTACTS WITH INTERESTED PARTIES

- Provided the following documents to the public information repository this quarter:

  - *First Quarter 2009 Progress Report, RCRA Corrective Action, Allison Transmission, Speedway, IN, USEPA ID Nos. IND000806836 and IND094469913*, April 14, 2009.
  - *Soil Vapor Extraction / Groundwater Recovery System Installation and Upgrade Report*, Former Degreaser Area, Plant 12, Allison Transmission, Inc., ARCADIS U.S., Inc., April 15, 2009.
  - *Stage III Additional Sampling Matrix*, RCRA Corrective Action, Allison Transmission, Inc., Speedway, IN, USEPA ID #IND006413348 and IND000806828, ARCADIS U.S., Inc., June 2009.

- Met with Marion County Health Department and Allison Transmission, Inc. on May 26, 2009 to discuss impacts of expanding the existing no-well zone #2 to cover the remainder of the Facility and some adjacent properties.

CHANGES IN PERSONNEL

- None.

PROJECTED WORK FOR NEXT REPORTING PERIOD

- Complete and submit an evaluation of water use at and in the vicinity of the Facility.
- Implement and complete field work portion of the *Stage III Additional Sampling Matrix*, 2009.
- Follow-up with Marion County Health Department and Allison Transmission, Inc. regarding expanding the existing no-well zone to cover the remainder of the Facility.
- Prepare responses, summaries of meetings, data reviews, or other conference calls with USEPA, as appropriate.
- Perform routine operation, monitoring and maintenance for operating remediation systems.

Executive Summary

On April 7, 2009, depth to groundwater was measured in 147 monitoring wells at the Site to obtain site-specific groundwater flow patterns in the S1, S2 and S3 sand and gravel units. Groundwater samples were collected from 53 monitoring wells between April 6, 2009 and April 10, 2009. The groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), arsenic, and lead. A light non-aqueous phase liquid (LNAPL) was observed in monitoring well MW-0636-S3 and was collected and analyzed for VOCs, SVOCs and polychlorinated biphenyls (PCBs). Additionally, a sample of the LNAPL from that well was collected and submitted to Zymax for C3-C44 finger print analysis.

An LNAPL, containing concentrations of polychlorinated biphenyls (PCBs), has been observed in one of the monitoring wells (MW-0413-S1) at the Waste Treatment Area (AOI 19). The installation of the LNAPL Recovery System at AOI 19 was completed in April 2009. Upon finalizing operation and maintenance (O&M) procedures, the system became operational on April 16, 2009. The recovered LNAPL is being recovered and stored in a tank with secondary containment prior to being shipped offsite for incineration in accordance with Toxic Substances Control Act (TSCA) regulations.

The Diesel Fuel Plume Groundwater Recovery System (AOI 40) has been in operation since 1973. This system was upgraded in 2001. Since the 2001 upgrade, approximately 21.05 million gallons of groundwater (approximately 7,100 gallons per day) have been recovered from nine recovery wells. In October 2005, the recovery system was further upgraded to allow for pre-treatment of the impacted groundwater and subsequent discharge to the Town of Speedway sanitary sewer system. Since the October 2005 upgrade, approximately 5.13 million gallons of pre-treated groundwater have been discharged to the Town of Speedway's sanitary sewer system. From January 2009 through June 2009, the Diesel Fuel Plume Recovery System removed an estimated 1,429 pounds of total petroleum hydrocarbons (TPH) –Diesel Range Organics (DRO). Since the upgrade in 2001, the estimated cumulative total for TPH-DRO is 92,859 pounds, or 13,000 gallons (based on a specific gravity of 0.85).

As part of the O&M activities for the Diesel Fuel Plume Groundwater Recovery System, absorbent socks are placed in monitoring wells which exhibit LNAPL, and inspected on a frequency commensurate with their LNAPL accumulation rate. From January 2009 through June 2009, approximately 10.62 gallons of LNAPL have been recovered by the absorbent socks.

In January 2009, approximately 32.5 tons of soil was excavated in the vicinity of the remediation system to remove diesel-impacted soil from a previous release of water and diesel fuel. Six post-excavation soil samples were collected and analyzed for TPH – extended range organics (ERO). TPH-ERO was not detected in any of the soil samples.

The AOI 51 soil vapor extraction (SVE) system installed at Plant 12 for the removal of tetrachloroethene (PCE) from the shallow soils in the vicinity of the former degreaser area has been in operation since October 30, 2003. From system startup in October 2003 through June 2009, approximately 26,838 pounds (13.4 tons) of PCE have been removed in the vapor phase (from soil), which includes approximately 263 pounds in the first half of 2009. The dense non-aqueous phase liquid (DNAPL) recovery system was installed in October 2003; however, this portion of the system was operated on a limited capacity. In February 2005, the DNAPL recovery component of the system was shut down to allow for the installation of a groundwater extraction and treatment system, incorporating the source area wells and down-gradient recovery wells. The expanded system start-up began on September 7, 2007. The start-up incorporated only the extraction and treatment of groundwater from the down-gradient recovery wells. The source area recovery wells were incorporated into the treatment system on November 28, 2007. System operation was monitored as recovery wells were incrementally turned on in order to ensure that air and water discharge permit limits were not exceeded.

To date, an estimated 12.3 million gallons of total fluids with an estimated 693.4 pounds of PCE have been removed by groundwater recovery activities associated with AOI 51. Approximately 1,260 pounds of PCE have been recovered since the upgrade and restart of the system in November 2007, of which approximately 604 pounds were recovered between January 2009 and June 2009.

O&M activities associated with the Transmission Test Cell Area (AOI 53) were completed from January 2009 through June 2009. O&M included the inspection of all monitoring wells in the vicinity of the Transmission Test Cell Area for LNAPL and placing absorbent socks in those wells where LNAPL was observed. Presently, three (3) monitoring wells have absorbent socks maintained because either measurable amounts of LNAPL or LNAPL globules have occasionally been observed. From January 2009 through June 2009, measurable product was observed in two monitoring wells, however due to low accumulation rates, no measureable LNAPL has been recovered by the absorbent socks at AOI 53.

1. Introduction

ARCADIS has prepared this semi-annual status report on behalf of Environmental Corporate Remediation Company, Inc. (ENCORE). This semi-annual status report summarizes the April 2009 groundwater gauging and sampling event, the performance of the Waste Treatment LNAPL Recovery System at the Plant 3 Waste Treatment Area (AOI 19), the Diesel Fuel Plume Groundwater Recovery System (AOI 40), and the AOI 51 soil vapor extraction (SVE) and Groundwater Recovery System installed at Allison Transmission, Inc. (Allison). In addition, activities related to the Plant 12 Transmission Test Assembly Area (AOI 53) are also summarized. This report covers the period from January 2009 through June 2009. Drawing 1 is a map of the Site. Drawing 2 depicts the specific location of the above-mentioned AOIs in addition to the monitoring wells located at the facility.

2. Groundwater Gauging

On April 7, 2009, depth to groundwater was measured in 147 monitoring wells at the Site to obtain site-specific groundwater flow patterns in the S1, S2 and S3 sand units. The gauging data are presented in Table 1 and were used to calculate groundwater elevations at each of the monitoring wells. The groundwater elevations for the S1 sand unit perched zones are presented in Drawing 3. The groundwater elevation contours in the S2 and S3 sand and gravel units are provided as Drawings 4 and 5, respectively.

Groundwater flow direction in the S2 sand and gravel unit beneath the Site is generally south towards Big Eagle Creek. During this gauging event, it appears that groundwater in the eastern portion of the Site is flowing towards Little Eagle Creek; however, Little Eagle Creek is identified in literature as a losing stream. The S2 sand unit is influenced in the area of the AOI 40 and AOI 51 by the groundwater recovery systems.

During the gauging event, the groundwater flow direction in the S3 sand and gravel unit beneath the Site is southwest as presented in Drawing 5 with a ridge divide that appears in the northern portion of Plant 14. The S3 sand unit is influenced in the area of AOI 51 by the groundwater recovery system.

During the gauging event, an LNAPL was encountered in monitoring well MW-0636-S3. The presence of an LNAPL in this monitoring well is suspected to be the result of surface infiltration. The monitoring well is screened in a confined unit from 45 ft to 55 ft below ground surface (bgs). Prior to the gauging event, a water line ruptured in this

area of the plant and there was standing water in the area for an unknown period of time, which may have allowed water containing LNAPL to enter the well. LNAPL and groundwater were pumped from the monitoring well during redevelopment. The monitoring well has been gauged several times since the redevelopment occurred and no measurable LNAPL has been identified.

3. Groundwater Sampling Event

Groundwater samples were collected from 53 monitoring wells between April 6, 2009 and April 10, 2009. Depth to groundwater was measured prior to purging the monitoring wells for sample collection. Groundwater sampling was performed utilizing a low-flow/low-stress technique. A stainless steel bladder pump equipped with a disposable polyethylene bladder was used to purge the monitoring wells prior to sampling. Approximately 300 gallons of water were purged from the 53 monitoring wells during the Spring sampling event. After field measurements stabilized, groundwater samples were collected in laboratory-supplied containers. The containers were immediately sealed, labeled and placed in an ice-packed cooler that was transported to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana, observing proper chain-of-custody procedures. The groundwater samples were analyzed for VOCs in accordance with USEPA SW-846 Method 8260; SVOCs in accordance with USEPA SW-846 Method 8270; and arsenic and lead in accordance with USEPA SW-846 Method 6010. The LNAPL identified in monitoring well MW-0636-S3 was collected and analyzed for VOCs, SVOCs and PCBs in accordance with USEPA SW-846 Method 8082. Additionally, a sample of the LNAPL was collected and submitted to Zymax for C3-C44 finger print analysis.

VOC and SVOC analytical results are summarized in Tables 2 and 3, respectively. The constituents identified on the table are the constituents of concern identified through the RCRA Facility Investigation process or related to the operation of the interim measures systems (i.e., tetrachloroethene (PCE) and its breakdown products). The organic analytical results for groundwater samples collected from April 2009 are provided on Drawings 6 through 10. The laboratory analytical results are provided in Appendix A.

4. Waste Treatment Area (AOI 19) – Waste Treatment LNAPL Recovery System

4.1 Background

The Waste Treatment Area (AOI 19) is located in a courtyard in the central portion of Plant 3 (Drawing 2). In 2004, as part of routine groundwater characterization activities at AOI 19, monitoring well MW-0413-S1 was installed down-gradient from the Waste Treatment Area skim basins. An LNAPL was observed in monitoring well MW-0413-S1. Fingerprint characterization of the LNAPL revealed it was a heavy petroleum product (i.e., lubricating oil or mineral oil) and analytical characterization of the LNAPL identified the presence of PCBs. During the initial sampling event completed on March 3, 2006, Arochlor 1248 was detected at 14 mg/kg and during a subsequent re-sampling event completed on March 17, 2006, it was detected at 31 mg/kg.

Numerous soil and groundwater samples have been collected and sampled for PCBs in the vicinity of the MW-0413-S1. Additionally, monitoring wells in the vicinity of MW-0413-S1 have been gauged for LNAPL (as shown is Drawing 11). Concentrations of PCBs were not detected in the soil samples above site-specific soil screening criteria, and were not detected in groundwater samples above laboratory reporting limits. No other monitoring wells in the vicinity of MW-0413-S1 have contained a measurable amount of LNAPL. Based on these evaluations, the presence of PCBs at AOI 19 has been delineated.

4.2 LNAPL Recovery System

The Waste Treatment LNAPL Recovery System consists of a specific gravity pneumatic skimmer pump installed in monitoring well MW-0413-S1. Upon finalizing the O&M procedures, system installation was completed on April 16, 2009. The recovered LNAPL is being stored in a tank with secondary containment prior to being shipped offsite for incineration in accordance with TSCA regulations. To date, it is estimated that less than 5 gallons have accumulated in the tank.

5. Diesel Fuel Release Area (AOI 40) – Diesel Fuel Plume Groundwater Recovery System

5.1 Background

Historical releases of diesel fuel at the Allison facility have resulted in a hydrocarbon sheen reaching Big Eagle Creek, located south of the facility. Drawing 2 depicts the specific location of the diesel fuel plume groundwater recovery system (AOI 40). To

control the migration of the hydrocarbon-impacted groundwater toward Big Eagle Creek, groundwater has been extracted from recovery wells installed and operated along the creek. The groundwater recovery system was not operating properly in June 2000 due to the recovery well screens becoming plugged. As a result of the system not operating properly, diesel sheen was observed at Big Eagle Creek. A containment boom was installed in Big Eagle Creek directly down-gradient of AOI 40 to mitigate the sheen. Oil-only absorbent booms are attached to the physical containment boom to capture a sheen that was seeping from the bank of the creek. The recovery system was upgraded in 2001. The upgraded system includes extracting groundwater from six wells (BW-5 through BW-10) installed along the creek. Groundwater is also extracted from three wells (BW-4, BW-11 and BW-12) installed near Plant 3 to collect hydrocarbon-impacted groundwater closer to the believed source of the diesel fuel release. Historically, all recovered groundwater was transferred to the Allison Waste treatment system for treatment. However, in October 2005, additional upgrades to the groundwater recovery system were completed, and the discharge from recovery wells BW-5 through BW-10 was redirected to the Town of Speedway sanitary sewer system on November 1, 2005 pursuant the Town of Speedway's Industrial Waste Discharge Permit Number 2003-1. The discharge goes through a pre-treatment system (oil/water separator and bag filters) for the removal of any recovered separate phase liquid and suspended solids from effluent water prior to discharge to the Town of Speedway's sanitary sewer system. As a result of GM's August 2007 sale of Allison, ENCORE applied for and received a permit (Permit Number 2007-3) dated October 1, 2007, from the Town of Speedway to discharge to the Speedway sanitary sewer system. Presently, groundwater recovered from the three wells located near Plant 3 is still transferred via an aboveground pipeline to the Allison waste treatment system. The containment boom in Big Eagle Creek is maintained as a precautionary measure to contain and capture any sheen that does enter the creek.

5.2 Monitoring

Water level measurements were collected monthly from monitoring wells that have historically demonstrated LNAPL accumulation rates requiring monthly absorbent sock change-out. The absorbent sock is removed from the monitoring well in advance of the water and LNAPL thickness measurements.

In January, February, March, April and June 2009, water level measurements were collected from the recovery wells near Big Eagle Creek (BW-5 through BW-10) and monitoring wells in the vicinity of the recovery well system near Big Eagle Creek (MW-28-S2, MW-30-S2, MW-31-S2, MW-32-S2, MW-33-S2, MW-34-S2, MW-0523-S2,

MW-0526-S2A, MW-0526-S2B, and MW-0625-S2A, MW-0622-S2A, and MW-0623-S2A, MW-0624-S2B, MW-0814-S2, MW-0815-S2 and MW-0816-S2). Table 1 summarizes historical water level elevation data. Drawing 12 shows the extent of observed LNAPL in the vicinity of AOI 26 and AOI 40. Drawing 13 presents the potentiometric surface maps for the recovery well system as measured in each of the above mentioned months of data collection.

As previously stated, effluent from recovery wells BW-5 through BW-10 is discharged to the Town of Speedway sanitary sewer system as permitted by Industrial Waste Discharge Permit Number 2007-3. ARCADIS personnel recorded flow data via the supervisory control and data acquisition (SCADA) system or Site visits for January through June 2009. Table 4 lists the amount of water discharged (by month) to the Town of Speedway's sanitary sewer system via Outfall 003. To verify compliance with the discharge limits set forth for permitted Outfall 003 in Permit Number 2007-3, effluent samples of oil and grease (O&G) and TPH (via CWA Method 1664) are collected on a monthly basis, and total toxic organics (volatile and semi-volatile) (via CWA Method 624 and 625) are collected on a quarterly basis. In January 2009, the field protocol for sample collection was modified such that the grab sample port is now purged of approximately 1L or more, prior to collecting the monthly TPH/O&G sample. Previous sampling events had periodically introduced solids into the compliance sample from residue in the sample valve and/or piping. Flushing the line with effluent appears to have improved the representativeness of the samples. During this reporting period, all effluent water discharged to the Town of Speedway's sanitary sewer system was in compliance with the discharge limits set forth in Permit Number 2007-3. Table 5 provides a summary of effluent water quality data collected since the discharge of effluent water to the Town of Speedway's sanitary sewer system began on November 1, 2005.

5.3 Diesel Fuel Plume Groundwater Recovery System Performance

Extracted well water samples were collected on February 10, 2009 and June 16, 2009 from each of the recovery wells and analyzed for TPH-ERO. TPH laboratory analytical results ranged from 4.3 mg/l (BW-6) to 199 mg/l (BW-4) during the February 2009 sampling event and from 1.6 mg/l (BW-9) to 1,400 mg/l (BW-7) during the June 2009 event. Analytical results for the recovery wells can be found in Table 6. Laboratory analytical results for the February 10, 2009 and June 16, 2009 sampling events are included in Appendix A.

Since upgrade of the Diesel Fuel Plume Groundwater Recovery System in 2001, the frequency and significance of observable sheen in the creek has steadily decreased. Based on readings from individual well flow meters, approximately 21.05 million gallons of groundwater has been recovered from the nine recovery wells. Approximately 15.92 million gallons of the recovered groundwater has been processed through the Allison wastewater treatment system, and 5.13 million gallons have been pre-treated and discharged to the Town of Speedway's sanitary sewer system. Currently, the system recovers an average of approximately 7,100 gallons per day, based on the number of days it has been in operation since late April 2001.

Table 7 summarizes the approximate flow from each of the recovery wells since the system began operation. Using the measured flow data and laboratory analytical results from each recovery well, TPH-Diesel mass removal can be estimated for each recovery well. As listed in Table 7, the calculated mass of TPH-Diesel removed from the recovery wells (BW-4 through BW-12) from January 2009 through June 2009 ranges from zero pounds at BW-11 to 907.94 pounds at BW-7, with an estimated total mass of 1,429 pounds TPH-Diesel removed in the recent six month period. Since the system was upgraded in April 2001, the total estimated amount of TPH-Diesel removed from all recovery wells is estimated at 92,859 pounds. Cumulative TPH-Diesel discharged over time and for the Diesel Fuel Plume Recovery System is presented in Appendix B.

Groundwater levels north of Big Eagle Creek are influenced by pumping from the recovery wells, BW-5 through BW-10. Groundwater capture in the vicinity of the Diesel Fuel Groundwater Recovery System is being further evaluated and will be presented in a separate report.

5.4 Diesel Fuel Plume Groundwater Recovery System Operation & Maintenance

Monthly O&M activities were performed from January 2009 through June 2009. Maintenance of pumps and flow meters was performed as needed by qualified personnel. Upgraded pump controllers (installed in September 2008) are continuously adjusted to optimize hydraulic control.

Beginning in September 2002, absorbent socks were installed in monitoring wells associated with the diesel fuel plume groundwater recovery system. During monthly O&M activities for January 2009 through June 2009, the absorbent socks were replaced if saturated with LNAPL. Maintenance on wells with absorbent socks is conducted on a monthly, quarterly, or semi-annual frequency based on previous

observation of LNAPL recovery rates in each well. Table 8 presents data from select monitoring wells containing absorbent socks, and their approximate saturation at periodic intervals. The monitoring well absorbent socks contain approximately six to eight ounces of polymer each. Therefore, approximately 10.62 gallons of LNAPL have been removed between January 2009 through June 2009 using the absorbent socks, and a total of 124.11 gallons of LNAPL have been removed since absorbent socks were installed in September of 2002. Drawing 12 shows the extent of observed LNAPL in the vicinity of AOI 40

In January 2009, approximately 32.5 tons of soil was excavated in the vicinity of the remediation system to remove diesel impacted soil from a previous release of water and diesel fuel. Six post-excavation soil samples were collected and analyzed for TPH-ERO. TPH-ERO was not detected in any of the soil samples. A letter was provided to IDEM on February 5, 2009, responding to the Compliance Evaluation Inspection conducted by IDEM on December 11, 2008. The letter included documentation of the soil removal activities, manifests for excavated soil, post-excavation sampling, and analytical results.

6. Former Degreaser Area (AOI 51) – AOI 51 SVE and Groundwater Recovery System

6.1 Background

A release of 8,000 gallons of PCE in the former heat treat area of Plant 12 was reported to the Indiana Department of Environmental Management (IDEM) on June 14, 1988. Drawing 2 depicts the specific location of the Former Degreaser Area (AOI 51). Subsequent subsurface investigations completed in AOI 51 have revealed elevated PCE concentrations in soil (located in the upper 12 feet) in the immediate vicinity of the former degreasing area. In addition, groundwater samples collected in the immediate vicinity of the spill area have shown that PCE has impacted groundwater. In July 2003, ARCADIS installed a soil vapor extraction system (SVE) and dense non-aqueous phase liquid (DNAPL) recovery system to remove PCE from the shallow soils and the groundwater in the vicinity of the former degreaser area. The systems began operation in October 2003; however, the operation of the DNAPL recovery portion of the system was limited. In February 2005, the DNAPL recovery system was shut down to allow for the installation of a groundwater extraction and treatment system, incorporating the six (6) source area wells and eight (8) down-gradient recovery wells. The source area wells are screened primarily in the S2A unit, and the down-gradient recovery wells are screened primarily in the S2 and S3 units. The installation of the

system was completed for the down-gradient recovery wells on September 7, 2007, with the incorporation of the source area wells on November 28, 2007.

Groundwater treatment consists of receiving influent groundwater water from the source area recovery wells and processing the groundwater through a DNAPL separator. The effluent from the DNAPL separator is transferred to an equalization tank where it is combined with groundwater extracted from the down-gradient recovery wells. The combined influent is treated through bag filters (for solids removal) and an air stripper (for VOC removal). Discharge of the pre-treated effluent water to the sanitary sewer system has been approved by the Town of Speedway through Industrial Waste Discharge Permit Number 2007-3. This permit was approved on September 24, 2007, and became effective as of October 1, 2007. Table 9 provides a summary of effluent water data collected from Outfall 004.

6.2 Monitoring

ARCADIS personnel recorded weekly flow data via the SCADA system (or Site visits) for January 2009 through June 2009. Table 10 lists the amount of water discharged (by month) to the Town of Speedway's sanitary sewer system.

During the first half of 2009, water level measurements were collected from monitoring wells within the vicinity of AOI 51. Water elevation data is summarized in Table 1. Drawings 14, 15 and 16 present the February 2009 potentiometric groundwater contours for the S2A, S2B and S3 sand units. The potentiometric groundwater contours for March 2009 and April 2009 will be presented in a subsequent report detailing the operational efficiency of the groundwater recovery system. The SVE and recovery well systems were operating during the gauging events and the resulting potentiometric surface maps display the influence the recovery wells have on groundwater in the vicinity of the system.

Groundwater samples were collected from the recovery wells associated with the Groundwater Recovery System on February 10, 2009 and June 16, 2009. The groundwater samples were analyzed for VOCs via USEPA Method 8260. The groundwater analytical results are presented in Table 11. The analytical results collected from RW-0501-S3 on February 10, 2009 appear to be anomalous, as the magnitude of the result was not replicated during the June 16, 2009 sampling event. Specifically, the February analytical results demonstrated significant results for PCE (<200 ppb), and had detections for TCE and cis-DCE. In previous sampling events, all

listed compounds were below detection limits, and again were shown to be below the same detection limits in June 2009.

Air samples from the SVE and air stripper emission stacks were formerly collected on a monthly basis. Since monthly air emission sampling is no longer a regulatory requirement (per exempt operation status letter dated August 14, 2008 from City of Indianapolis, Department of Public Works), ARCADIS recommended that ENCORE reduce the frequency of air stripper vapor sampling from monthly to quarterly. Due to the varying nature of the influent water VOC concentrations in the air stripper feed water, the data is highly variable and not helpful for performance monitoring purposes. By way of an example, if the DNAPL separator has just transferred water to the EQ tank, the air stripper emission stack concentration is relatively high compared with more typical operation. However, ARCADIS recommended ENCORE continue monthly vapor sampling of the SVE remediation system so that evaluation and adjustments can be made to the system, as needed. As a result of this recommendation, the air stripper was sampled in January and February for the first quarter of 2009, and in April for second quarter 2009. The SVE system has continued to be sampled on a monthly basis. Tables 12 and 13 summarize the mass removal from the SVE system and the air stripper, respectively. Laboratory results for the air samples from January 2009 through June 2009 are included in Appendix A.

6.3 AOI 51 SVE and Groundwater Recovery System Performance

The SVE System has been in operation since October 30, 2003. During this period, a total of approximately 26,838 pounds (13.42 tons) of PCE have been removed from the subsurface soil vapor (Table 12 summarizes constituents of concern removed to date). Cumulative PCE Discharged over time and monthly PCE discharged over time for the SVE System are presented in Appendix C.

The Groundwater Recovery System started operation on September 7, 2007. During the first half of 2009, an estimated 199 pounds (0.1 tons) of PCE have been removed from the groundwater via air stripping (Table 13 summarizes constituents of concern removed to date from the air stripper). Cumulative PCE discharged over time and monthly/quarterly PCE discharged over time for the Groundwater Recovery System are presented in Appendix C.

Groundwater levels in saturated portion of sand unit S2A, and units S2B and S3 are controlled in the vicinity of AOI 51 by the recovery wells screened in their respective saturated sand units. Groundwater control in the saturated portion of sand unit S2A is

demonstrated on Drawing 14 and is controlled by recovery wells RW-0201-S2A through RW-0205-S2A. Groundwater control in the saturated sand unit S2B is demonstrated on Drawing 15 and is controlled by recovery wells RW-0501-S2B, RW-0502-S2B, RW-0602-S2A/S2B, and RW-0604-S2B. The sand unit S3 is demonstrated on Drawing 16 and is controlled by recovery wells RW-0501-S3, RW-0602-S3, RW-0603-S3, RW-0604-S3, and RW-0605-S3.

To date, an estimated 12.3 million gallons of total fluids with an estimated 1,320 pounds of PCE have been removed by groundwater recovery activities. Approximately 1,260 pounds of PCE have been recovered since the upgrade and restart of the system in November 2007, of which approximately 627 pounds were recovered between January 2009 through June 2009 (605 pounds of PCE from the recovery wells and 22 pounds of PCE from the air stripper). Additionally, on March 16, 2009, one (1) drum of PCE sludge containing DNAPL and water was removed from the Site. After settling, the drum was gauged to determine the amount of DNAPL removed. It was estimated that 11 gallons (150 pounds) were removed via the DNAPL separator. Table 13 summarizes the mass removal of PCE from the air stripper, and Table 14 summarizes the mass removal of PCE in the liquid phase.

6.4 AOI 51 SVE and Groundwater Recovery System Operation & Maintenance

Monthly O&M activities were performed from January 2009 through June 2009. Maintenance of pumps and flow meters was performed as needed by ARCADIS personnel. Routine maintenance, including bag filter changes and air compressor maintenance, is scheduled for completion on a weekly basis. Air stripper cleaning involves recycling a muriatic acid solution to remove scaling on trays (ARCADIS measures pH prior to discharge of recycled water to ensure it is within the permit limits). During the first half of 2009, ARCADIS has continued to utilize sequestering agent in the treatment train prior to air stripping. The addition of sequestering agent has reduced premature air stripper fouling. Upgrades to PLC and data logging capabilities are ongoing.

7. Transmission Test Assembly Area (AOI 53)

7.1 Background

The transmission test assembly area was located near the south-central portion of Plant 12. This area of the Site is illustrated on Drawing 2 (AOI 53). The transmission test assembly area contained two transmission test cells and a transmission fluid recycling vault. The transmission test assembly area was removed from service in

2006. A storm water drain, which traverses east to west beneath the northern half of the test cells area, connects the roof drains to the storm water sewer. In 2001, a release was identified when automatic transmission fluid (ATF) was observed on the surface of water discharging to a storm water transfer sump near Column V-054. To identify the source of the ATF, Allison contracted to have a video inspection of the storm sewer performed. The inspection identified ATF entering into the pipe connecting the roof drain at Column V-046 to the storm sewer. Based on this finding, Allison performed an exploratory excavation inside the building where the roof drain penetrates the concrete flooring. The excavation revealed that ATF had migrated through a small gap in the concrete and entered the drainpipe at a joint just below the concrete. Approximately one cubic yard of impacted soil was removed for disposal, and the concrete was replaced and the gap between concrete and drainpipe was sealed.

ARCADIS performed several subsurface investigations in the vicinity of the transmission test assembly area under the guidance of IDEM. These investigations revealed TPH concentrations in soil ranging from below laboratory detection limits to 77,000 milligrams per kilogram (mg/kg). TPH concentrations have been delineated in all cardinal directions in the vicinity of the transmission test assembly area.

Seven monitoring wells are present in the vicinity of the transmission test assembly area. Previous sampling events have not revealed elevated concentrations of identified constituents of concern (i.e., volatile organic compounds and/or semi-volatile organic compounds) in these wells. However, globules of transmission fluid have been identified in three of the seven monitoring wells (MW-0111-S2, MW-0203-S2A, and MW-0205-S2A). A measurable amount of LNAPL has occasionally been observed in wells MW-0111-S2, and MW-0205-S2A. The observed LNAPL thickness at these three locations has ranged from 0.01 to 0.25 feet since monitoring began. The wells were gauged during the April 2009 monitoring event and are presented on Drawing 4 and Table 1. LNAPL measurements collected at the Transmission Test Cells Area are tabulated on Table 1 and the extent of observed LNAPL is presented on Drawing 3.

7.2 Absorbent Sock Operation and Maintenance

Beginning in February 2003, absorbent socks were installed in monitoring wells associated with the Transmission Test Cells Area. During semi-annual O&M activities completed during the first half of 2009, the absorbent socks were replaced if saturated with LNAPL. Table 15 lists the wells in which absorbent socks were installed and are currently monitored on a semi-annual basis.

Presently, three monitoring wells have absorbent socks maintained because either measurable amounts of LNAPL or LNAPL globules have been observed. The monitoring well socks used contain approximately six to eight ounces of absorbent polymer each. Therefore, an estimated total in excess of 20 gallons has been removed since absorbent socks were installed in February 2003.

NOTES:
1.) Total Well Depth and Depth to Water measurements recorded from Top of Casing.
2.) Elevations referenced to mean sea level
3.) LNAPL - non-aqueous phase liquid
4.) -- - No measurable LNAPL present in well
5.) NM - Parameter Not Measured.
6.) NA - Data not available
7.) <0.1 ft of LNAPL observed in bailer
8.) * - indicates well has been abandoned

	Drinking Water Criteria (MCL or Region 9)			**.007**		**.005**		**.07**	**.005**	**.005**	**.002**	**10**

NOTES:
Concentrations exceeding the Drinking Water Criteria are highlighted green
mg/L- milligram per liter
U- Not detected above laboratory reporting limits
J - Estimated value
R - Rejected value
UJ - Not detected above laboratory reporting limits, value is estimated
NA - Not analyzed
MCL - Maximum Contaminant Levels

NOTES:

1) Discharge of the pre-treated effluent water has been approved by the Town of Speedway through Industrial Waste Discharge Permit Number 2007-3. This permit was approved on September 24, 2007, and became effective as of October 1, 2007. Prior to October 2007, the discharge was permitted through the Town of Speedway Industrial Waste Discharge Permit Number 2003-1.
2) Currently, Outfall 003.
3.) * - Discharge of BW-5 through BW-10 to the Town of Speedway sanitary sewer.

Discharge Limits***		**200**	**2.13****	
Surcharge Limit****	100			

Limit

All sample results are reported in milligrams per liter (mg/L) or parts per million (ppm)

ND - Constituent not detected above laboratory detection limit

NAN - Not Analyzed

* - Pump problem prevented complete TTO sample from being collected

** - TTO permit limit based on combined TTO Volatiles and TTO Semi-Volatiles

*** - Discharge limits set forth in: Modifications to: Allison Transmission, GMC Industrial Waste Discharge Permit No. 2007-3 (effective 1 October 2007).

**** - Surcharge applies if oil and grease discharge limits exceeded.

NOTES:

1.) Analytical data presented in milligrams per liter (ppm)

2.) NA Not Applicable/Not Available

3.) Samples analyzed after April 2001 and before December 2002 were validated and if a qualifier was assign
the qualifier is presented after the result. Following are descriptions of qualifiers:

D - compound at secondary dilution factor

U - compound was not detected

DJ - compound was estimated at a secondary dilution factor

NE - Not Established

R - Rejected

UJ - compound was detected below the de

J - compound estimated below detection li

	January - June 2009[15]	728,141	264.03	43
	Cumulative Results	3,965,234	2,465	--

Total Volume of Water Pumped =	**21,050,448**	**gal**
Average Gallons/Day Pumped[9] =	**7,100**	**gal**
Total TPH-Diesel Removed to Date[10] =	**92,859**	**pounds**
Total TPH-Diesel Removed for Current Time Period[10] =	**1,429**	**pounds**

*Barrier well not sampled, pump was not operational

Values presented above are estimates. Flowmeters for individual wells are not calibrated annually. Additionally, due to low flow rates, the appropriately sized flow meters are small diameter, therefore small flow meter orifices, which are prone to fouling, which stops data collection until cleaning. Therefore, the values presented are typically under-reporting the total volume of fluids processed.

Notes:

1.) Average TPH concentration is calculated using TPH concentrations reported for samples collected on 5/21/01, 5/24/02, 11/20/02.
2.) TPH concentration as reported for samples collected on 5/22/03.
3.) TPH concentration as reported for samples collected on 12/17/03.
4.) TPH concentration as reported for samples collected on 5/14/04.
5.) TPH concentration as reported for samples collected on 11/24/04.
6.) TPH concentration as reported for samples collected on 6/29/05.
7.) TPH concentration as reported for samples collected on 12/15/05.
8.) TPH concentration as reported for samples collected on 6/12/06.
9.) Average gallons/day pumped since system began operation in April 2001.
10.) Value calculated assuming that 1 lb of water = 0.85 lbs of TPH-Diesel.
11.) TPH concentration as reported for samples collected on 4/5/2007.
12.) TPH concentration as reported for samples collected on 12/11/2007.
13.) Average TPH concentration is calculated using TPH concentrations reported for samples collected on 3/4/08 and 6/3/2007.
14.) Average TPH concentration is calculated using TPH concentrations reported for samples collected on 08/11/08 and 11/03/08.

Notes:
1.) List of all monitoring wells containing absorbent socks in the Barrier Well System area.
2.) See Table 6 for absorbent sock change-out schedule.
3.) Began noting absorbent sock % of LNAPL saturation (if less than 100%).
4.) Quarterly groundwater monitoring - all socks changed out.
5.) According to the manufacturer, 12 ounces of the polymer contained in the absorbent socks absorbs approximately a half-gallon of hydrocarbon.
The monitoring well socks used contain approximately six to eight ounces of polymer each. Therefore, on average, each monitoring well socks contains:
0.3 gallons hydrocarbons
6.) Socks removed prior to semi-annual groundwater sampling, however, no record of percent of LNAPL saturation. Socks reinstalled in April during O&M.
7.) NA - Not Applicable - Sock removed.

Total Hydrocarbons Recovered (gallons): **124.11**

Discharge Limits*	**1.0**

Notes:
All sample results are reported in milligrams per liter (mg/L) or parts per million (ppm)
ND - Constituent not detected above laboratory detection limit
NAN - Sample was not analyzed
NAN[#] - Due to miscommunication, a sample from Outfall 004 was not collected and analyzed in July 2008. After communicating this to POTW, Town of Speedway requested collection and analysis of two (2) samples in August 2008.

* - TTO permit limit based on combined TTO Volatiles
Discharge limits set forth in: Industrial Waste Discharge Permit No. 2007-03 issued to Environmental Corporate Remediation Company, Inc (ENCORE), effective October 01, 2007.

Water discharged prior to October 01, 2007 was performed under Industrial Waste Discharge Permit No. 2003-01 issued to General Motors Powertrain - Allison Tranmission.

NOTES:
1) Discharge of the pre-treated effluent water has been approved by the Town of Speedway through Industrial Waste Discharge Permit Number 2007-3. This permit was approved on September 24, 2007, and became effective as of October 1, 2007. Prior to October 2007, the discharge was permitted through the Town of Speedway Industrial Waste Discharge Permit Number 2003-1.
2) Currently, Outfall 004.

Notes:

* Estimated 12 consecutive month discharge is calculated by the sum of mass removed during the last 12 months listed on the table above.

** - Based on previous sampling events Chloroform Cumene and Toluene assumed below detection limits for 7/7/05 sampling event due to lab running the wrong analyte list, and omitting these three compounds from the list.

*** - System shut-down on 10/7/05 for tank replacement, and was restarted on 11/3/05

***** - Allison Transmission sold on 8/7/07.

N/A Sample not analyzed for this parameter

The discharge interval is the generally the interval between the collection of two samples. Samples are collected at the beginning of each month and whenever an adjustment to the system is made that might affect the discharge. The results used to calculate the discharge are from the sample collected at the beginning of each interval. For example, the August 2004 discharge was calculated using data from two discharge intervals. The first interval (August 1 - August 3) is a continuation of the July 2004 interval and uses the laboratory data for the sample collected on July 7 to calculate the discharge mass. The second interval (August 3 through August 31) used the analytical data collected from the sample collected on August 4, 2004 to calculate the discharge. Because this remediation system is removing a finite mass from the subsurface soil, the concentrations will decrease over time; therefore, the practice of using the data collected at the beginning of the discharge interval provides a conservative (biased high) estimate of the mass discharged. It is important to note that throughout the operation of this system, the concentration of PCE removed has always decreased over time unless additional extraction wells are opened to improve the effectiveness of the system. The day or two interval between system adjustment and sample collection also provides a conservative concentration value because when the system is adjusted to increase its effectiveness (i.e.., additional extraction wells are brought on-line), it takes time for the effect to be fully realized.

In July 2008 ENCORE submitted an Air Permit Modification Application to the City of Indianapolis proposing to remove the ENCORE permitted units from the Allison Transmission, Inc. Title V Permit. In August 2008, ENCORE received approval of the application from the City of Indianapolis which identified the units as exempt from air pollutant permit requirements.

As monthly air emission sampling is no longer a regulatory requirement (per exempt operation status letter dated August 14, 2008 from City of Indianapolis, Department of Public Works), monthly vapor sampling of the SVE remediation system will continue so that evaluation and adjustments can be made to the system as needed.

Table 13. Mass Removal Summary Sheet for Constituents of Concern from the Plant 12 Groundwater Recovery System Air Stripper, Interim Measures Semi-Annual Status and Groundwater Monitoring Report, First Half 2009 (January 2009 - June 2009), Allison Transmission, Inc., Speedway, Indiana.

Not a Hazardous Air Pollutant

Notes:

*- Source area recovery wells activated on 11/28/07.

** Estimated 12 consecutive month discharge is calculated by the sum of mass removed during the last 12 months listed on the table above.

N/A Sample not analyzed for this parameter

The discharge interval is the generally the interval between the collection of two samples. Samples are collected at the beginning of each month and whenever an adjustment to the system is made that might affect the discharge. The results used to calculate the discharge are from the sample collected at the beginning of each interval. For example, the August 2004 discharge was calculated using data from two discharge intervals. The first interval (August 1 - August 3) is a continuation of the July 2004 interval and uses the laboratory data for the sample collected on July 7 to calculate the discharge mass. The second interval (August 3 through August 31) used the analytical data collected from the sample collected on August 4, 2004 to calculate the discharge. Because this remediation system is removing a finite mass from the subsurface soil, the concentrations will decrease over time; therefore, the practice of using the data collected at the beginning of the discharge interval provides a conservative (biased high) estimate of the mass discharged. It is important to note that throughout the operation of this system, the concentration of PCE removed has always decreased over time unless additional extraction wells are opened to improve the effectiveness of the system. The day or two interval between system adjustment and sample collection also provides a conservative concentration value because when the system is adjusted to increase its effectiveness (i.e.., additional extraction wells are brought on-line), it takes time for the effect to be fully realized.

In July 2008 ENCORE submitted an Air Permit Modification Application to the City of Indianapolis proposing to remove the ENCORE permitted units from the Allison Transmission, Inc. Title V Permit. In August 2008, ENCORE received approval of the application from the City of Indianapolis which identified the units as exempt from air pollutant permit requirements.

As monthly air emission sampling is no longer a regulatory requirement (per exempt operation status letter dated August 14, 2008 from City of Indianapolis, Department of Public Works), the frequency of air stripper vapor sampling has been reduced to quarterly starting with First Quarter 2009. The sample from February 2009 was used to calculate the air emissions for March 2009.

Total Volume of Water Pumped[3] =	**6,821,569**	**gal**
Average Gallons/Day Pumped[4] =	**8,635**	**gal**
Total PCE Removed (lbs)[3]=	**1,059.6**	**lbs**
Total PCE Removed (gal) [3] =	**78.1**	**gal**
Total PCE Removed for Current Time Period =	**604.9**	**lbs**
Total PCE Removed for Current Time Period =	**44.6**	**gal**

Notes:

Values presented above are estimates. Flowmeters for individual wells are not calibrated annually. Additionally, due to low flow rates, the appropriately sized flow meters are small diameter, therefore small flow meter orifices, which are prone to fouling, which stops data collection until cleaning. Therefore, the values presented are typically under-reporting the total volume of fluids processed.

1.) VOC concentrations reported for samples collected on 12/12/07.
2.) Average VOC concentration is calculated using VOC concentrations reported for samples collected on 3/4/08 and 6/3/08.
3.) Between 11/5/03 and 2/15/05, approximately 38,868 gallons of water and approximately 60.87 lbs of PCE were removed (primarily from RW-0202-S2A) - value does not include data prior to 2007.

The system was upgraded and restarted in November 2007. Data presented is based on individual well flowmeters which have historically underrepresented total flow (due to flowmeter fouling,etc.)

4.) Average gallons/day pumped since system restarted in November 2007.
5.) Average VOC concentration is calculated using VOC concentrations reported for samples collected on 8/11/08 and 11/3/2008.
6.) Average VOC concentration is calculated using VOC concentrations reported for samples collected on 02/10/09 and 06/16/09.
*Analytical data collected 1/25/2008 for RW-0603-S2B.

Total Hydrocarbons Recovered (gallons) 20.54

Notes:
LNAPL = Light non-aqueous phase liquid.
NM = not measured.
1.) List of all monitoring wells containing absorbent socks in Transmission Test Cell Area.
2.) Monitoring well socks checked on a semi-annual basis (Effective second half 2007).
3.) Began noting absorbent sock % of LNAPL saturation (if less than 100%).
5.) According to the manufacturer, 12 ounces of the polymer contained in the absorbent socks absorbs approximately a half-gallon of hydrocarbon.
The monitoring well socks used contain approximately six to eight ounces of polymer each. Therefore, on average, each monitoring well socks contains: 0.3 gallons hydrocarbons.
6.) Socks removed prior to semi-annual groundwater sampling, however, no record of percent of LNAPL saturation. Socks reinstalled in April during O&M.

ANALYTICAL PARAMETER

DEFINITIONS

S1 Saturated or Unsaturated Sand Unit encountered from
1 to 16.5 feet below ground surface (BGS) with a clay underneath and where saturated, it is considered perched.
S1 ranges in thicknes from 14 to 16 feet.

S2 Saturated Sand Unit ranges from ranges in thickness of 6 to 43.5 (ft).

S2 may be subdivided into units S2A or S2B if a clay is present that divides the S2 unit.

S2A is encountered from 16.5 to 34 feet BGS and ranges in thicknes from 4.5 to 15.5 feet.
S2B is encountered from 15 to 48.5 feet BGS and ranges in thicknes from 3 to 20 feet.
If S2B is present, then the saturated unit above the till is named S2A.
If S2B is not present, then the saturated unit above the till is named S2.

S3 Saturated Sand Unit typically encountered from 37 to 76 feet BGS and ranges in thicknes from 2.6 to 24.5 feet.

S4 Saturated Sand Unit typically encountered from 89 to 110 feet BGS and ranges in thicknes from 4 to 10.5 feet.

T Saturated Till Unit encountered at 32 feet BGS at monitoring well MW-0204-T.

DATABOX INFORMATION

NS - Not analyzed for the specific constituent.

Water Analytical Results (mg/L)

Databoxes include constituents that were detected above screening criteria (Region 9 Industrial PRGs with a target cancer risk of 1 E-6 and a hazard quotient of 1) in one or more samples collected at the Site, except for the following:

- constituents with concentrations that exceed criteria in only borehole water samples; and
- constituents that are believed to be unrelated to the Facility and/or were detected only infrequently at low levels.

DATA QUALIFIERS

R - Rejected
U - Analyte/Compound was analyzed for but not detected.
UJ - Quantitation limit qualified as estimate.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

2/3/2009
Ms. Heather Gastineau-Lyons
ARCADIS, Inc.
251 East Ohio St., Suite 800

Indianapolis IN 46204

Project Name: Allison Trans
Project #: IN000473.0019.7

Dear Ms. Heather Gastineau-Lyons

The following report includes the data for the above referenced project for sample(s) received on 1/21/2009 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for you air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Brandon Dunmore at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Brandon M. Dunmore

LABORATORY NARRATIVE
Modified TO-15
ARCADIS, Inc.
Workorder# 0901352

Two 1 Liter Tedlar Bag samples were received on January 21, 2009. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 0.2 liters of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
Daily CCV	</= 30% Difference	</= 30% Difference; Compounds exceeding this criterion and associated data are flagged and narrated.
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction no performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

LABORATORY NARRATIVE
Modified TO-15
ARCADIS, Inc.
Workorder# 0902222

Two 1 Liter Tedlar Bag samples were received on February 11, 2009. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 0.2 liters of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
Daily CCV	</= 30% Difference	</= 30% Difference; Compounds exceeding this criterion and associated data are flagged and narrated.
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction no performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

LABORATORY NARRATIVE
Modified TO-15
ARCADIS, Inc.
Workorder# 0904212

Two 1 Liter Tedlar Bag samples were received on April 10, 2009. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 0.2 liters of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
Daily CCV	</= 30% Difference	</= 30% Difference; Compounds exceeding this criterion and associated data are flagged and narrated.
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

RE: Project: AT Barrier/Outfall IN473.19
Pace Project No.: 5023144

Dear Ms. Scrocchi:

Enclosed are the analytical results for sample(s) received by the laboratory on February 11, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: AT Barrier/Outfall IN473.19
Pace Project No.: 5023144

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

R1	RPD value was outside control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

RE: Project: AT RW/Outfall IN473.19
Pace Project No.: 5023146

Dear Ms. Scrocchi:

Enclosed are the analytical results for sample(s) received by the laboratory on February 11, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Mick Mayse for
Donna Spyker

QUALIFIERS

Project: AT RW/Outfall IN473.19
Pace Project No.: 5023146

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

1d	Evaluated to 14.6 ug/L RSR 2/17/09
D4	Sample was diluted due to the presence of high levels of target analytes.
J	Analyte detected below reporting limit, therefore result is an estimate.
M0	Matrix spike recovery was outside laboratory control limits.
R1	RPD value was outside control limits.

RE: Project: ATD IN000473.0019
Pace Project No.: 5027338

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN000473.0019
Pace Project No.: 5027338

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

1d	Evaluated to 179 ug/L per MDL AMV 6-26-09
2d	Evaluated to 179 ug/L per MDL. AMV 6-27-09
3d	Evaluated to 30.6 ug/L per MDL AMV 6-26-09
4d	Evaluated to 30.6 ug/L per MDL. AMV 6-27-09
D4	Sample was diluted due to the presence of high levels of target analytes.
J	Analyte detected below reporting limit, therefore result is an estimate.
M0	Matrix spike recovery was outside laboratory control limits.

RE: Project: ATD Outfall IN000473.0019
Pace Project No.: 5027335

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD Outfall IN000473.0019
Pace Project No.: 5027335

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

1d	Benzene evaluated to 6.2 ug/L per MDL. AMV 6-28-09
2d	evaluated to 3.8 ug/L per MDL. AMV 6-28-09
D4	Sample was diluted due to the presence of high levels of target analytes.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: ATD IN000473.0019
Pace Project No.: 5027338

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN000473.0019
Pace Project No.: 5027338

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

1d	Evaluated to 179 ug/L per MDL AMV 6-26-09
2d	Evaluated to 179 ug/L per MDL. AMV 6-27-09
3d	Evaluated to 30.6 ug/L per MDL AMV 6-26-09
4d	Evaluated to 30.6 ug/L per MDL. AMV 6-27-09
D4	Sample was diluted due to the presence of high levels of target analytes.
J	Analyte detected below reporting limit, therefore result is an estimate.
M0	Matrix spike recovery was outside laboratory control limits.

RE: Project: ATD IN000473.0019
Pace Project No.: 5027336

Dear Ms. Scrocchi:

Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN000473.0019
Pace Project No.: 5027336

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

This report shall not be reproduced, except in full,

RE: Project: AT-IN473.20.2
Pace Project No.: 5025183

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on April 13, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: AT-IN473.20.2
Pace Project No.: 5025183

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

1d	Due to the high concentration of PCE a lower dilution was not analyzed. aa 4/20/09
2d	No surrogate added to the Blank. KES 4-16-09
3d	No surrogate added to the sample. KES 4-16-09
4d	Sample contained free product. aa 4/20/09
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
J	Analyte detected below reporting limit, therefore result is an estimate.
M0	Matrix spike recovery was outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

RE: Project: ATD IN000473.0019
Pace Project No.: 5024430

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on March 19, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN000473.0019
Pace Project No.: 5024430

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

QUALIFIERS

Project: AT Outfall IN473.19
Pace Project No.: 5023366

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M0	Matrix spike recovery was outside laboratory control limits.
R1	RPD value was outside control limits.

This report shall not be reproduced, except in full,

RE: Project: ATD IN000473.0019
Pace Project No.: 5027336

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN000473.0019
Pace Project No.: 5027336

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

RE: Project: ATD IN473.19.7
Pace Project No.: 5024627

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on March 25, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD IN473.19.7
Pace Project No.: 5024627

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

This report shall not be reproduced, except in full,

RE: Project: Allison IN473.204
Pace Project No.: 5025362

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on April 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: Allison IN473.204
Pace Project No.: 5025362

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

RE: Project: Allison Transmission Outfall
Pace Project No.: 5022429

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on January 09, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: Allison Transmission Outfall
Pace Project No.: 5022429

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

RE: Project: AT Outfall IN473.19
Pace Project No.: 5023181

Dear Ms. Scrocchi:

Enclosed are the analytical results for sample(s) received by the laboratory on February 11, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt for

QUALIFIERS

Project: AT Outfall IN473.19
Pace Project No.: 5023181

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

RE: Project: Allison Outfall IN473.19
Pace Project No.: 5024949

Dear Ms. Scrocchi:

Enclosed are the analytical results for sample(s) received by the laboratory on April 03, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt for
Donna Spyker

QUALIFIERS

Project: Allison Outfall IN473.19
Pace Project No.: 5024949

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

RE: Project: AT Outfall IN473.19.5
Pace Project No.: 5025938

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on May 07, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: AT Outfall IN473.19.5
Pace Project No.: 5025938

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

RE: Project: ATD Outfall IN000473.0019
Pace Project No.: 5027335

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on June 17, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

QUALIFIERS

Project: ATD Outfall IN000473.0019
Pace Project No.: 5027335

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C	Pace Analytical Services - Charlotte
PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

1d	Benzene evaluated to 6.2 ug/L per MDL. AMV 6-28-09
2d	evaluated to 3.8 ug/L per MDL. AMV 6-28-09
D4	Sample was diluted due to the presence of high levels of target analytes.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Allison IN473.20.4
Pace Project No.: 5025055

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on April 08, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

Case Narrative- Level Project Review
Project 5025055(Conestoga-Rovers and Associates)

General Reporting Comments

Quality control issues or reported footnotes that require more detailed information will be covered in this case narrative. Dilutions of samples are indicated in the sample results section under the heading 'DF'. The raw sample and calibration data is included following the body of the report. This raw data is separated by analysis and then further separated into categories of information.

Sample Receiving

No discrepancies were noted concerning sample receipt or sample transfer.

GC/MS Volatiles- Method 8260

The Laboratory control samples listed on pages 49-50 and 57-58 have one footnote (L3) indicating 1,1,2-Trichlorotrifluoroethane was above the laboratory control limits. Associated samples are unaffected by the high bias. The project specific matrix spike listed on pages 58-59 for sample 5025055003 has one footnote (M0) indicating one compound was outside the laboratory control limits. All other quality control indicators for this project (method blank, LCS and matrix spike results) are within laboratory acceptance limits.

I have reviewed the data from this project and have found all other discrepancies to be sufficiently covered in the footnotes in the report or documented within the raw data.

Theresa L Sheingold

Theresa Sheingold
Quality Analyst
Pace Analytical Services

The review of this project and the associated case narrative are part of a review process for final reports that require a complete set of data deliverables. This process is completed by a member of the Quality Department as part of Pace Analytical's Indiana state requirements.

QUALIFIERS

Project: Allison IN473.20.4
Pace Project No.: 5025055

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M0	Matrix spike recovery was outside laboratory control limits.

This report shall not be reproduced, except in full,

Sample Condition Upon Receipt

Pace Analytical

Client Name: ArCadis Project # 9025056

Courier: ☐ Fed Ex ☐ UPS ☐ USPS ☐ Client ☐ Commercial ☑ Pace Other _____

Tracking #: _____

Optional
Proj. Due Date:
Proj. Name:

Custody Seal on Cooler/Box Present: ☐ yes ☑ no Seals intact: ☐ yes ☑ no

Packing Material: ☐ Bubble Wrap ☐ Bubble Bags ☐ None ☑ Other _____

Thermometer Used 123456 **Type of Ice:** (Wet) Blue None ☐ Samples on ice, cooling process has begun

Cooler Temperature 1.9°C **Biological Tissue is Frozen:** Yes No

Date and Initials of person examining contents: 4/8/09 ZT

Temp should be above freezing to 6°C

		Comments:
Chain of Custody Present:	☑Yes ☐No ☐N/A	1.
Chain of Custody Filled Out:	☑Yes ☐No ☐N/A	2.
Chain of Custody Relinquished:	☑Yes ☐No ☐N/A	3.
Sampler Name & Signature on COC:	☑Yes ☐No ☐N/A	4.
Samples Arrived within Hold Time:	☑Yes ☐No ☐N/A	5.
Short Hold Time Analysis (<72hr):	☐Yes ☐No ☑N/A	6.
Rush Turn Around Time Requested:	☐Yes ☐No ☑N/A	7.
Sufficient Volume:	☑Yes ☐No ☐N/A	8.
Correct Containers Used:	☑Yes ☐No ☐N/A	9.
-Pace Containers Used:	☑Yes ☐No ☐N/A	
Containers Intact:	☑Yes ☐No ☐N/A	10.
Filtered volume received for Dissolved tests	☐Yes ☐No ☑N/A	11.
Sample Labels match COC:	☑Yes ☐No ☐N/A	12.
-Includes date/time/ID/Analysis Matrix: Water

Target Version: 4.14

Concentration Formula: Amt * DF * Uf/Vo * CpndVariable

Name	Value	Description
DF	1.000	Dilution Factor
Uf	5.000	ng unit correction factor
Vo	5.000	Sample Volume purged (mL)
Cpnd Variable		Local Compound Variable

Compounds	QUANT SIG MASS	RT	EXP RT	REL RT	RESPONSE	AMOUNTS CAL-AMT (ppb)	AMOUNTS ON-COL (ppb)

QC Flag Legend

T - Target compound detected outside RT window.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: 50MSV2.i
Lab File ID: A01CCV.D
Lab Smp Id: ccv
Analysis Type: VOA
Quant Type: ISTD
Operator: amv
Method File: \\50wintarget\chem\50MSV2.i\a040909.b\-8260-c1.m
Misc Info:

Calibration Date: 09-APR-2009
Calibration Time: 00:00
Client Smp ID: ccv
Level: LOW
Sample Type: WATER

Test Mode:
Use Initial Calibration Level 5.
If Continuing Cal. use Initial Cal. Level 5

COMPOUND	STANDARD	AREA LIMIT LOWER	AREA LIMIT UPPER	SAMPLE	%DIFF
40 Fluorobenzene	311539	155770	623078	355752	14.19
59 Chlorobenzene-d5	282684	141342	565368	313841	11.02
82 1,4-Dichlorobenze	140868	70434	281736	136784	-2.90

COMPOUND	STANDARD	RT LIMIT LOWER	RT LIMIT UPPER	SAMPLE	%DIFF
40 Fluorobenzene	4.19	3.69	4.69	4.21	0.50
59 Chlorobenzene-d5	7.41	6.91	7.91	7.43	0.14
82 1,4-Dichlorobenze	9.15	8.65	9.65	9.15	0.06

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: 50MSV2.i
Lab File ID: A01CCV.D
Lab Smp Id: ccv
Analysis Type: VOA
Quant Type: ISTD
Operator: amv
Method File: \\50wintarget\chem\50MSV2.i\a041009.b\-8260-c1.m
Misc Info:

Calibration Date: 09-APR-2009
Calibration Time: 23:56
Client Smp ID: ccv
Level: LOW
Sample Type: WATER

Test Mode:
Use Initial Calibration Level 5.
If Continuing Cal. use Initial Cal. Level 5

COMPOUND	STANDARD	AREA LIMIT LOWER	AREA LIMIT UPPER	SAMPLE	%DIFF
40 Fluorobenzene	311539	155770	623078	355675	14.17
59 Chlorobenzene-d5	282684	141342	565368	307278	8.70
82 1,4-Dichlorobenze	140868	70434	281736	133625	-5.14

COMPOUND	STANDARD	RT LIMIT LOWER	RT LIMIT UPPER	SAMPLE	%DIFF
40 Fluorobenzene	4.19	3.69	4.69	4.21	0.61
59 Chlorobenzene-d5	7.41	6.91	7.91	7.43	0.20
82 1,4-Dichlorobenze	9.15	8.65	9.65	9.16	0.16

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

RE: Project: Allison Transmission
Pace Project No.: 5025166

Dear Ms. Scrocchi:
Enclosed are the analytical results for sample(s) received by the laboratory on April 10, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Donna S. Spyker

Case Narrative- Level Project Review
Project 5025166 (Conestoga-Rovers & Associates)

General Reporting Comments

Quality control issues or reported footnotes that require more detailed information will be covered in this case narrative. Dilutions of samples are indicated in the sample results section under the heading 'DF'. The raw sample and calibration data is included following the body of the report. This raw data is separated by analysis and then further separated into categories of information.

Sample Receiving

No discrepancies were noted concerning sample receipt or sample transfer.

GC/MS Volatiles- Method 8260B

The laboratory control samples listed on pages 97-98, 101-102 and 105-106 have one footnote (L0) indicating Acetone was outside the laboratory control limits. All other quality control indicators for this project (method blank and matrix spike) are within laboratory acceptance limits.

GC/MS Semi-Volatiles- Method 8270C

The LCS listed on pages 93-94 has one footnote (L0) indicating three compounds were outside the laboratory control limits. The project specific spike set is listed on pages 94-95 for sample 5025166036. There are two footnotes (M0 and R1) indicating three compounds were outside the control limits for recovery and all compounds were outside the RPD control limits. All other quality control indicators for this project (method blank) are within laboratory acceptance limits.

ICP-Method 6010B

All quality control indicators for this project (method blank, matrix spike and LCS results) are within laboratory acceptance limits.

The review of this project and the associated case narrative are part of a review process for final reports that require a complete set of data deliverables. This process is completed by a member of the Quality Department as part of Pace Analytical's Indiana state requirements.
