Good. These sound like changes we could make without checking with IOAA folks ☺

Subject: NATA risks - diesel, formaldehyde, MYA

I heard that NATA (National Air Toxics Assessment) is coming out on Dec 15th and is going to show potential risks related to formaldehyde, diesel exhaust and chloroprene. This may draw external attention to the timeline for the formaldehyde assessment. OAQPS wanted the formaldhyde schedule info internally for a briefing with Janet McCabe tomorrow so I relayed what David said in DDs this morning. The NATA results could also draw attention to the multi-year agenda and the flexibility to add other chemicals (e.g., diesel exhaust). It might be worth making a small edit in the MYA to make it clear that the agenda is not set in stone.

Proposed edit to the MYA: Ex. 5 Deliberative Process (DP)
