Subject: Materials and a plan for the pre-brief?
Attachments: Ammonia_major SAB science issues_IOAA Briefing_2-2-16.docx; EtO_major SAB science issues_IOAA Briefing_2-2-16 GP-jj v2.docx; TMBs_IOAA Briefing_2-2-16.docx

Importance: High

Hi Maureen –

Vince said his plan for the pre-brief was to go over the regular 6-month outlook and dig in to a few of the chemicals you highlighted.

To that end, we have briefing materials prepared for the 3 chemicals that we have final CAAC reports for: EtO, TMBs and Ammonia.
These materials include the basic values and hazard calls, a summary of the main science issues raised by the SAB (with our response, where possible), and a proposed schedule for posting (streamlined fact-sheets, if you will).
The chemical managers with talk him through these issues and be prepared to discuss in more detail.

BaP does not have a final CAAC report yet, and we need a bit more prep time to brief him on the science issues for arsenic and formaldehyde.

Does this jive with what you wanted?
I went back through e-mail and saw that we discussed several different options.
Will this work?

Attached are the materials for the 3 chemicals above.
Vince will provide the 6-month outlook when he is back in the office.

Thoughts??
