Update. John stopped by and he wants me to sample the actual in-use production wells d/g of the Site. (CWSC 279). He also said we should sample the WRD wells – but I don't remember Phuong discussing those. I have a call in.

Sorry to drag you into this – we can talk later if you get a chance. Cynthia

Subject: more sampling production well questions

Hi Scott,

I talked to Dana about waiting until April to analyze the three production wells and the two monitoring wells within 2 miles of the Site, in light of the 2014 pCBSA sampling results. She felt that Enrique had made a commitment to sample the drinking water wells before the treatment plant testing, so she thought we should quickly analyze even if I felt confident that pCBSA has not migrated there. So I proposed the two active production wells as soon as I can get someone out there, and all five in April.

She asked me to discuss with you and get your thoughts.

(An aside, I am not sure how quickly I can sample the inactive production well.)

Thanks, Cynthia
