Subject: Draft-Draft Comments on the Site Characterization Report
Attachments: LCP OU2 Site Characterization Report EPA comments V2 3_26_2020 .docx; Copy of Updated Review of MWs.xlsx

Prashant,
Please find attached EPA's preliminary draft comments on the SCR and a table highlighting some wells and concentrations about which EPA may have concerns. The comments and the tables are incomplete and still a work in progress. EPA is working to prepare a complete list of wells about which there are concerns either from trends, last sampling event or other issues. GEPD's comments are not incorporated into this draft letter, yet. EPA is hopeful we can provide a Draft Final set of comments by COB today, but wanted to get something to you this afternoon in order to have a productive call tomorrow. There are multiple options for the wells that are identified. You may be able to provide feedback that a nearby well at a similar depth provides adequate coverage, or it may be that a well is compromised and needs to be removed from the list and possibly replaced at a later phase. It may also be acceptable that sampling that is needed could be accomplished for the RD/RA phase. It is expected that only a subset of the wells will be needed in the long term for the remedy, so that EPA does not mean to imply that every well is needed for the future. Again, the preliminary draft comments and table are provided for discussion purposes for the call tomorrow. EPA expects to have draft final comments next week.

Sincerely,

Robert H. Pope, GS-14
