Subject: Biosolids City of Eureka

Lauren,

Hello, I am trying to determine what will be required from the EPA for the City of Eureka to restart their biosolids land application program. It is diked bay lands and requires a Section 10 permit from the US ACE. We are in the process of getting that wrapped up. The RWQCB (Rachel Prat and Mona Doughtery) said that they did not have jurisdiction over the application of biosolids in "waters of the US" and that they differed to EPA for permit (or other) coverage. If we are following all of the guidelines and rules in Part 503 what else do we need to do? Thanks for your help. SS
