Lauren: We will collect additional samples today from the stored material in the biosolids handling building. The results of analysis should be available the first week in March. We will note this in the report.

Thanks for your help.

Clay

You can run additional samples on the biosolids in storage, and note in the report that the additional results will be coming an a projected date.

Lauren: Synagro land applied the biosolids. There was only 2 samples taken total. We still have dewatered 2015 biosolids in storage and could grab additional samples, but I doubt the results could be had before the report is due.

Subject: RE: biosolids report

Did Synagro land apply all of the 362.7 DMT, or did they land apply a portion and take the rest to a landfill? If they land applied more than 290 dry metric tons, 4 sets of samples should have been analyzed. If Eureka ran 2 samples and Synagro ran additional samples, Eureka may report the samples that Synagro ran as well.

Subject: biosolids report

Lauren, as you know, I'm assisting with the preparation of the city's 2015 biosolids report. I appears the biosolids were sampled and analyzed twice during 2015. The city produced a total of 555.7 DMT of biosolids last year of which 362.7 were handled under contract by Synagro. Is there a problem with the number of samples taken verses the total amount generated considering that all but 193 DMT was hauled and applied Synagro?
